Looking for a manual for a Heath DX-40 transmitter.
Clean photocopy is fine. I will pay postage.

Yes, I know I can buy manuals from HI, W7FG, Ray
Sarrio, and many others. I was hoping one of my
fellow hams would help me out with a copy (like
I've done DOZENS of times with my manuals!).

In article <38095a86.5357487@news1.wolfenet.com>, henry@wolfenet.com says...
>
>I was wondering if someone has a high quality pic of a Hallacrafters
>S-107 that they could send me via email..
>Thanks in Advance, Henry, K7WAR

Yes... I have one on my web page: http://www.qsl.net/k5dh

Click it up, click the hot spot to bring up the pic, and
click your right mouse button to bring up a menu of options
that include the ability to save an image, then save it to
your hard drive.

I also have a copy of the manual, if you need one.

I still have these two military units. They are 120 volt primaries. Secondary is 1100-0-1100 volts center tapped at 280mA ccs. Run these in parallel for greater current capacity or in series for higher output voltage. Great for a single 3-500Z, pair of 572Bs, or quad 811A deck. Kind of heavy at abt 30 pounds each.

Both for $40 plus shipping on 60 pounds from San Diego 92139.

I have two Heathkit HD-1250 grid dippers. One has the case removed because I was going to re-paint it. It looks like it has some old electrical tape stuck to it on the outside.

Have all the coils for each and also the plastic cases that the coils and grid dipper sits in.

Sell both as a package only for $75 shipped anywhere in the continental US. Yes they both work 100%. Yes I have at least one complete book. Actually the book is so good I made a copy for myself because it really goes into the theory of operation of a grid dipper.

Source record: 77785

Hi, Joe,

Have you considered replacing the sweep tubes with 6146's? That is what I am doing with my GT-550. It obviously requires some significant mods to the PA stage (different tube sockets, for one). I don't have the matching AC supply, so I am modifying a homebrew one for the new, lower voltages (and lower current requirements). I figure 200W PEP input is enough. I have always been suspicious of the Galaxy's ratings.

73s and good luck,

Ted Bruce - W2ICV

I found a small 12 VDC fan that fits snugly behind the heatsink and is sandwiched on top and bottom by the covers. It keeps the heat sink nice and cool and eliminates the drift.

Hi Will:

I have a good cure for ur so called drifts of freq jumps....those are freq corrections that are taking place from ur micro processor circuit going to plug #15 on ur PTO board #81647....what u need to to do is disconnect or clip the wire label lock at that 3wire plug this wire goes to varactor D1 which rcves a change in voltage for freq corrections.....I made this change in my scout and end of problem. If u dont understand what Iam talking about I have it on paper.
With that lock wire disconnected ur scout is like a normal rig without that high tech circuit for a problem that doesnt exist anyway...hi. Hope that helps.
Jack.....K8BVJ

Interesting fix, but I was really hoping for the mod with the cap swap. . .it seems to me that what you describe would disable the frequency correction circuit altogether, and I don't want to do that. Thanks for the suggestion.

From: gadget <gadget@jnlk.com>
Message-ID: <7ugk72$fb8$1@nnrp1.deja.com>
Source record: 77703

Hi,
I was wondering if anyone might have an antenna trimmer knob lying about that would match an NC 155. It's a blue plastic knob with an aluminum skirt. Also, if anyone might have the plastic shaft that extends the vtrmmer's shaft out to the front panel where the knob attaches, I could really use it. If anyone has these extra parts lying about, please let me know. Thanks!

Hi,
You cannot sub 6LB6 with 6JS6 because of plate dissipation but you can do it with 6KD6. It is the same socket and need adjustment of bias setting and adjustment of neutralization capacitors.

Hey guys, I have nothing to gain by telling you this, but I had
a Swan TB4HA many years ago, atop my 60 foot tower and I worked the
world on it!

With my KW, I OWNED the 15m band on SSB to Japan in the afternoons!
I would get home at 2 p.m. in Tennessee and point that TB4HA
northwest.

The next thing I knew I would get a massive pileup of JA-s all wanting
to work me!

By the way, they cost considerably less in numerical dollars in the
70s! It was one of the best bargains, in my opinion.

I remember when mine arrived... It was a big day! It was also a
SIZEABLE PACKAGE, LOL!

Dan, if ONLY I had a house and some space, I would love to take it off
your hands!

Howdy, Folks.

This is an open invitation to browse http://hfradio.org, the NW7US Ham Radio and Shortwave Radio Resource Website.

This non-commercial site offers:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

From: twbruce@mindspring.com
Message-ID: <380cad12.86243080@nntp.mindspring.com>
Source record: 77728

Does anyone have information or a source for it on FET/MOSFET
conversions for tube receiver front ends? I saw one years ago for a
Motorola 41v 2m rig (talk about boatanchors, hi!) but I've long since
disposed of the info and the rig. What is involved other than biasing
for the requirements of the device? Are the impedances critical,
i.e., do the tuned circuits need to be modified?

Thanks,

Ted

I have had in storage a set of white Kenwood HS-4 deluxe headphones from the late 1970's/early 1980's. These are the forerunners of Kenwood's famous HS-5 deluxe phones--excellent audio quality, light weight, full (and snug!) ear pads, very comfortable for long wear. They are in virtually new condition, suitable for everyday use or as a fine addition to a vintage station. Will sell for $45 + $3 to ship. Tks es 73! Jan N0JR

Believe it's 6V6s or 6F6s, George, but the problem may be caused by radiated heat from a nearby rectumfier tube, or the audio outputs. Best way to check is to measure the current, shouldn't be more than 100ma or so with no signal. If it is, there's leakage in the bypass or filter crapacitors, or a shorted tube.

After all the horror stories about the USPS and UPS---a bright
spot in the shipping industry. I usually use FedEx for expensive and/or
fragile items---their SuperSaver 3 day rate is about 60% more than UPS
but they tend to be more careful with things!
Sent a very fragile X-ray tube out to the West Coast last week--
The buyer e-mailed me on Friday to report that it was smashed in the
packing [which by the way was really well padded/double boxed et al]. I
called FedEx customer service that day [remember this was a Friday] and
reported the claim. Got a refund check via FedEx overnight delivery
today!!!!! That's only 1 working day turnaround---I don't know if that
is typical but it impressed the Hell out of me. A company where Customer
Service actually means something.
Just my .02 worth---I have no connection to the company other than
being a very satisfied customer. Next time you get fed up with UPS,
give the guys and gals in purple a try.
Craig

You include USPS. Hmmm....I for one buy and sell all over this world and in four years of switching to them, and using them exclusively, I never once have had a lost or even a damaged package. For myself there is no other option-it's USPS.

Regrds,

Mike

Wait a sec... they charged more, smashed your item
despite it being well packed, and you are recommending them?!

UPS will at least smash stuff for a reasonable price ;-)

No refund can fully compensate for a broken antique IMHO.

Eric

I like the USPS. They have always gotten packages to me right on time,
and I have never lost an item with them.

Since the big UPS strike, their quality of service has really hit rock
bottom.

I had a RA1217 (RA6217 essentially same thing) - while it performed well,
somehow I could never work up much enthusiasm for it. The mechanical counter
frequency display was probably a factor. My feeling is that the
RA1217/RA6217 is best suited to fixed frequency point-to-point operation,
which is how the military typically operate.

I've got a copy of RACAL publication no. 312-1, which gives complete specs
etc. 2 double sided A4 pages, if anyone need a copy.

Current xcvr is an H-P 312B Selective Level Meter/Wave Analyzer, which is
just amazing. If only it had AGC... someday I'll get around to it.

Ever have USPS lose a $6,000 check? I have.Ever get a supplier
calling you asking where the hell your $6,000 payment is? I have.
Ever have checks & packages delivered to the wrong place
then have them turn up 6 months later? Customers who shipped
packages/checks to you that didn't turn up in the so called "2-3 day"
delivery time call up screaming, and of course, the package/check
couldn't be tracked? Ever try collecting on so called
Postal Insurance? Ever have the Post Office deliver you
a reduced to shreds package or letter in a plastic bag, with an
apology that it was eaten in Postal equipment?

What's weird is that international packages often beat
domestic packages for delivery time.

>
> Since the big UPS strike, their quality of service has really hit rock
> bottom.

Priority mail is just a political ploy to cover the fact that the
big earner for the USPS is junk mail. USPS is a junk mail junkie
just like AOL.Get real,look at the rates UPS & Fedex charge for
air service.This gives you an idea what it really costs.

One of the things that makes it possible for the USPS to stay in business is their power to stifle competition. Beginning a few years ago they have taken legal action against any company that sends inter-office correspondence in bundles via Fedex, UPS Air, etc. A lot of large (some not so large) companies will pile stuff for their other locations together and send it a couple times a week by Fedex. Just as fast, much more reliable and a lot cheaper than putting a stamp on each envelope. USPS will sue. Mostly the victims will agree to pay some amount of postage and then continue sending bundles by Fedex.

My company ships stuff basically exclusively by Fed-Ex and they do seem to have a little more respect for the packages (of course they charge more). UPS' recent crackdowns seem to indicate to me that they have decided to limit what they take rather than improve their quality control, so what you see is what you get. The USPS seems somewhere in between, but due to their inability to track packages makes me nervous.

My solution...
Anything that I have original boxes for or that is pretty indestructible goes UPS, (NEVER COD!)...unless it is stuff that if it were to be destroyed I would be depressed. In that case and for everything else...Fed-Ex.

Kevin

From: mc@REMOVE.sover.net
Message-ID: <380e247d.28840026@news2.sover.net>
Source record: 77676

This is a nice compact antenna tuner from the KWT-6 transmitter. It is very light and extremely well built. Uses a combination of fixed and variable capacitances along with a nice roller inductor. Front panel has the same multi-turn knob as the KWM-1. Is rated conservatively at 100 Watts Carrier (AM/CW key down) which translates to about 175 Watts SSB.

The cabinet has been repainted (black), feet have been added and a ground post has been mounted in a spare hole on the rear panel. These mods are 100% reversable if desired.

Price is $65.00 plus UPS. If interested please reply by e-mail.

73,

Michael Crestohl

For trade: Hallicrafters CB-3A tube-type CB radio.
Missing the mic and power cord, otherwise complete.
All eight channels populated with crystals. All of
the tubes are in place, but not tested. Radio is in
decent shape, but it needs a good cleaning. There's
a 1/4" phone jack on the right side of the cabinet
that looks like it doesn't belong there (added by a
previous owner, perhaps). Want to trade for a tube-
type Raytheon base station CB in good cosmetic shape
(any model except TWR-2, which I have already).

Iï¿½m going to take my old Drake C-Line out of the closet and fire it up again. First, I will open it up and get the dust out of it (I also just like looking around inside for old times sake). I havenï¿½t turned the rig on for about a decade now and Iï¿½m a little concerned about that first in-rush of AC current after so long on the shelf. I remember something about electrolytic capacitors needing to be re-formed after a long sit and Iï¿½m wondering if all the other components need to be gradually re-introduced to electricity rather than merely flipping the on-switch.

Do any of you BA fans have an accepted practice for applying power to old gear for the first time in many years?

Although some purists may suggest that you bring up the rig with
a variac, I would just go ahead and plug it in. If your electrolytic caps
are bad, then they are bad. They will fail shortly even if you follow
some power-up recipe.

I have the original dc filter cap bank from a Henry 2-K3/4 HF amp. Consists of (8) 450 volt electrolytics, (6) of which are 80uF and (2) that are 50uF. These are mounted to the circuit board with the 20K ohm 20 watt equalizing resistors in place and the bracket, all ready to be mounted and used. Looks super clean. $60 shipped continental US.

My .02 worth:

I used to use UPS. The last five or six packages they delivered were in horrible condition. They didn't appear to have been dropped, rather, they appeared to have been thrown, kicked, stomped on, and run over with the truck a few times. The last package I received from them was the worst. This particular box had been mashed until it was more-or-less spherical. Add to that their new "politically correct" position on firearms, and I'll take my business elsewhere, thank you.

Well guys: The biggest problem is when u ship some thing like a heavy rig, amp, etc....dont use them cheap boxes...u need heavy duty boxes like 2 or more ply type like the ones MFJ and some of the other companies use like TEN TEC. Double box always double box heavy shit. using styro foam just like the pros use.
I never had a problem with UPS or the other ones mentioned...I have shipped heavy AMPs, classic gear, etc and all this shit arrived in one piece. One thing I always specify when I buy a rig or whatever from a guy is to double box the item and forget about them dumb peanuts guys use. they are only good for real light stuff like a mic or a ant tuner, etc.
And if u ship xray tubes or what ever tubes made of glass....let the UPS guy at the counter know.... they have glass stickers they put on the box and all glass shit gets special treatment.

Hi Jeff,

It can't hurt to bring it up 10 volts at a time on a variac. It is probably ok, but bringing it up slowly will allow the caps to reform and the tubes to build a space charge. If you are ambitious, you can pull it out of the cabinet and monitor the voltage on the electrolytic. It should increase with the variac (after the rectifiers start conducting). If one section refuses to come up, it may indicate a shorted section. You then could address the capacitor without drawing excess current throught the power transformer or choke. (I am speaking generically and not about you Drake's circuit)

More than likely the rig will be fine, but a variac is still an excellent idea. Then you can run the rig, while attended, for a few hours to let it dry out and caps to reform.
I would not do any alignment until the rig has been run for hours.

Speaking of chrome-plating things that shouldn't be . . .

Now I've seen everything. In a nearby antique mall, I was astonished to see a fully chromed Hallicrafters S-38. The perp, er, seller wasn't satisfied with stripping the original black paint and substituting chrome. He/she/it also threw away the original knobs and found gaudy replacements for that ugly old Hallicrafters factory stuff. (Wish I knew where he/she/it lived -- I have been seeking a couple of S-38 knobs for months.) Oh, and those ugly red dial pointers were also stripped of their paint and polished to a shiny brass.

The price, you ask? Only $175 !!

I wonder how much it would cost to chrome-plate my Hammarlund HQ-180AC? Whoa there, what am I thinking? I can just walk down to the local Rite-Aid drugstore and get a can of cheap silver spray paint. The stuff they sell around Hallowe'en in the craft/decoration aisle looks purty good and would stick on for at least a week.

> elsewhere, thank you.

Pardon me if I am mistaken, but my understanding of UPS's "politically correct position on firearms" is that they will no longer ship *handguns*, only longarms from now on, simply because so many pistols were being stolen (a revolver is easy to conceal, unlike a deer rifle), presumably by employees. Just protecting their own financial interest, their customers, and the public, I would say. . .

Of course, I await the development of the transporter for my future shipping needs, since *every* shipper out there manages to destroy my packages. . .

>

Agreed that the USPS is as shoddy a shipper as ever. However, I don't get the logic implied here about why USPS overnight and 2nd day rates are cheaper than the commercial services.

Inferring what something actually costs to produce or render based on the fee or selling price is true "voodoo" economics. Look at telephone service or banking for example. Both are service industries in which the cost of doing business has dropped precipitously over the last 25 years, and rates and charges to the consumer have gone up at many times the rate of general inflation. Example: banks charge you several dollars to use ATMs not "on their network" (ridiculous, since the entire banking system is intimately and inextricably linked at every level). ATMs have tremendously increased banks profitability, and yet we are charged left and right to use them.

The ugly truth about cost vs. price (and quality!) is that the two have no clear or fair relationship [that is maybe OK where boatanchors are concerned, but not eyeglasses, milk, and checking accounts]. We are back to where we were in the heyday of John D. Rockefeller; industries collude to fix prices, but the difference now is that such practices have the sanction and blessing of government and the law. Mergers have everything to do with this. We all hear the intoning of CEOs about how abc inc. and xyz co. merging will mean better stuff at lower prices, when the opposite nearly always is true.

Eventually, I fully expect everything from McDonald's to Bank of America, and from Samaritan Health Systems to Random House & R.J. Reynolds & NBC & AT&T & General Motors & Micro$oft & Little Debbie to be one giant company. We don't have far to go to get to that point. Give it 50 years, and we'll be there. What is the value of capitalism without a genuine free market and good faith competition? God bless corporation(s)! [:P]

Actually, Vince, it was sometime earlier this year!

I think you might get a little better service if you're a
commercial shipper spending more than $10,000 a year.
Just my guess.

My thoughts:

1. if they break it - it wasn't packed well enough (you can't bring dead stuff back from the grave).

2. all shipper break anything they can

3. pick the one with the best price performance curve given each person's level of need and convienience.

4. I stopped using UPS as when I take a package to them, the cut open the box, rummage around and then don't seal it up worth a damn.

5. Never had any problem with Fed-ex or USPS

Well, you won't believe what happened to a package I sent
to the USA, via Dutch postal services, and in the US probably
handled by USPS.
I sent a package with a book and some tubes, it never got
delivered to the person it was sent to.
About 2 months later, I found the book in my mailbox , in a
different box, without tubes, mailed from the city the
recipient lives.

How 'bout *that*, folks?

Imagine this, your rigs are proudly displayed and used by the
the purchaser. Sorry you lost your rigs, but rest assured that they
are not in some landfill. I made some great garage sale purchases,
and the previous owners have no idea that the units are kept in good
shape and used often.

well, FEDEX lost an insured, overnight delivery package that JUST ABOUT PUT MY COMPANY OUT OF BUSINESS. It was a one-off proto for a demo to someone looking to fund our company. It showed up a couple of weeks later. What I learned...

FEDEX has special treatment based on how much business you do with them. They will employ third party companies to find a package IF you theaten to sue or can get to a high level support person.

KEEP CALLING UNTIL THEY CANNOT STAND TO HEAR FROM YOU ANYMORE. The problem will get attention if you are TOTALLY obnoxious. Not rude, but persistent

The person on the other end of phone cannot help you. You MUST get to a supervisor.

FEDEX moves tons of packages, so unless you are IBM, or Amazon, don't expect any help. BUT, if you keep at it, you may get your package.

BTW, they are not better or worse than any other similar service.

4990. Re: FEDEX--A Great Company to deal with!!!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-21 00:00:00 UTC
From: pfriedr <pfriedrNOSPAM@azstarnet.com>
Message-ID: <380FC2F5.C6E2FA8E@azstarnet.com>
Source record: 77560
Cross-posted to: rec.antiques.radio+phono,rec.audio.tubes,rec.radio.amateur.boatanchors

Will,

I'd prefer to return focus to the subject of tubes and tube gear, but since you reacted to my post, I will respond to say that I believe that you *are* mistaken.

First off, nobody slaps a postage stamp on the barrel of a gun and tosses it in the mail bin. You can count on the fact that it will be in a BOX. Second, I rather doubt that anyone shipping a gun would advertise that fact by printing "ENCLOSED IS YOUR GUN" on the side of the box. Thus, if UPS employees are swiping handguns off the delivery truck, what they are *really* doing is stealing SMALL BOXES.

I would be interested to know just how many guns are claimed to have been stolen. If the number is small and statistically insignificant, then the revised policy really addresses a nonexistent problem. It can be nothing more than a clear statement of "political correctness."

Much worse, is the opposite scenario. If the number of stolen handguns *is* significant, then I have to wonder just how many small, heavy boxes a thief would have to steal before they found one with a gun in it. The inescapable conclusion in that case is that the theft problem is even worse than advertised. Gee, this could be bad for business...! Gentlemen! Meeting at 9:00 a.m. to discuss damage control! Bring the P.R. consultant!

Well, since guns are politically IN-correct, and nobody *really* cares about them except for rednecks, Branch Davidians, and constitutional whackos, they make a convenient and effective scapegoat. With the stroke of a policy pen, the Dilbert-ian "pointy hairs" convert a chronic theft problem to a gun problem. Then, in the same stroke, they "solve" that problem by banning the shipment of said guns on their trucks. This is much easier than admitting that you are a shipping company with thieves on your payroll.

Great move, because anyone who really "cares" about humanity (who will protect the children!?) will applaud this with tear-swelled eyes. This is precisely what I'd expect from that mentality: releave the corrupt and/or irresponsible human of accountability, and attack the inanimate object, even if that means screwing those humans who are not corrupt, and who are perfectly willing to ACCEPT responsibility for their actions.

I agree that they are "protecting their financial" interests. However, if they were really interested in the welfare of their "customers" and the "public" as you say, then they would instead focus their efforts on capturing, firing, and prosecuting the responsible individuals.

Final thought: when small heavy boxes continue to disappear, what will they refuse to deliver next?

The Trimble military GPS with vehicle mounting bracket, battery packs, power cable, and all the manuals is available, but the external antenna is spoken for. You can see it at http://ihatepooters.tripod.com/photos/page1.html , as well as pages 2 and 3. $500 and a few bucks for shipping. It's not very heavy, so shouldn't be too much. Jim in Duvall, WA
P.S. It's software version 2.02A

Silver paint is for amateurs. I favor antique gold for metal radios and
fire engine red for plastics ;)

Just to be fair (and to leaven my previous rant), the Postal Service
IS a lot better than it used to be. 99% of the stuff does get through
just fine. We've been taking our stuff to the same post office branch
for 15 years, I know most of the folks by their first name, they're
fine people.
It does seem that when the PO screws up, they have this annoying
habit of doing it at the worst possible time, and it always seems
to involve the touchiest people.
IMA that the new Delivery Confirmation on Priority Mail is a great
thing (and it's proof positive that the stuff was mailed), but
I'd also note that it does not include insurance and does not
mean that the Post Office will find your package if it gets waylaid.

The biggest problem around here is when we get substitute carriers,
sometimes we'll get mail for 2225 W Belmont or 2225 W Addison,
or 2255 W Roscoe, and vice versa.On occasion they've delivered mail
to unused doors or gangways and it sat there until discovered
months later.

I've had UPS actually catch damaged packages before they were
delivered and call me OFFERING to pay me for them.

Jeff,

It's very easy to build that power supply for the CSR5.

Some parts for it are obtainable at Radio Shack...

The CSR5 requires 12 VAC for the filaments at around 2A and 250 VDC
for the plates at around 100 mA. Most junk boxes have enough stuff to
build to these requirements.

The 12 V transformer is sold at RS, as well as 1N4007 or similar diodes
for the rectifier. The high voltage transformer can be made up from two
115V-to-115V isolation transformers with the primaries in parallel and
the secondaries in series. Antique Radio Supply carries plate supply
transformers and even power supply kits.

Good luck,

Meir WF2U

why do people break up systems??? Like pulling the xtal cal and selling it seperate..
Just to get more for the radio/ acc combination ?? Can't be to allow someone else to have it because the radio they got had the xtal calibrator pulled before it went to auction. Gone are the days when you could buy a radio and get the radio, acc. that go with it and the original manual. That copy the manual and sell/auction the original is a nice trick also..... This does not apply to all but there is enough of this happening that a trend to greed instead of passing on to other hams a nice complete package seems to be happening all over. What are we talking about.. Maybe 30-50 $$ more in the sellers pocket?? Chump change when compared to anthing for sale these days.l I have a gorgeous NC-300 for sale .. A 9.5-9.8 (conservative rating mind you) all over with the 303 mods (audio, sideband, ect) prof. done and the xtal cal and original manual/sevice notes are included. Let me know if interested by e-mail. Looking to trade swap for it or sell outright with a fair offer. Hollow state HOSSTRADERS

Well, the S-38 was never a GOOD radio, but at least its homely style was honest. Speaking as a person with limited style sense (I severely limit the palette of clothes colors I own so that I have a fighting chance of wearing something that my wife will let me be seen in public with), I can sort of understand the desire to tart up a plain old radio. I've bought a few cheap bakelite sets with the intention of experimenting with painting them bright colors, but I've never been able to bring myself to replace the original ivory or brown. I do have a photo of a fire-engine red Bendix 526 that I admire, and I visit a bright blue Airline pushbutton set at the local Ruby Tuesday's regularly, for re-inspiration. One of these days, though, I'll weaken...

But since none of these things is a rare antique, but just a cheap consumer item meant to be used and thrown away, painting or chroming is a pretty honorable end. Better than the landfill.

Source record: 77619

Connect a light socket in series with the power cord. Start with the lowest wattage bulb you have or want to buy. Install the bulb in the socket and turn the power on. The bulb will drop most of the voltage but still leave some for the rig.

After an hour or so, put in the next larger bulb and wait again. Continue increasing the bulb size and one hour waits until you run out of bulbs

Now, plug the rig into the power outlet, cross your fingers and turn it on. You have done about all you can do to make it work.

Not to be "nit-picky", but... the 80m novice band was moved a few years back. It now covers 3675 to 3725 KHz, making those four crystals no longer novice frequencies. They're still in the CW band, however.

While I have your attention... got any 40m crystals between 7000 and 7060 KHz for sale?

73,
Dean / K5DH

Yikes, that's worse! However I might disagree with a political position, I must honor their decision to stand by it, and base my actions accordingly. But to run so slipshod an operation that they can't ensure the delivery of a small and valuable product is damning.

>Well, the S-38 was never a GOOD radio

Well . . . evaluated WITHIN ITS DESIGN LIMITS, the S-38 is a purty darned good radio in my view. It was designed to be [1] inexpensive and [2] easy to use. How many similarly-priced five-tube shortwave radios of that day will beat it in features/performance? Its color-coded controls are brilliantly simple and user-friendly. If you switch everything to the "red" position, you can't help but hear something!

>but I've never been able to bring myself
>to replace the original ivory or brown.

Your soul has not withered yet! Cleave to the good and resist the Dark Side :-)

>I visit a bright blue Airline pushbutton set at the local Ruby Tuesday's

Ah, now I know where you live, man -- ha, ha! :-)

>But since none of these things is a rare antique, but just a cheap consumer item
>meant to be used and thrown away...

Go to a museum and look at Roman pots, Colonial tables, Viking axes, and countless other everyday items considered disposable when made. Precisely because most people didn't save them, these objects may be scarcer than artsy-fartsy decorations intended as "museum pieces." Yesterday's everyday object may become tomorrow's priceless antique, and it has historical value because it shows how real people lived.

In historical/social terms, the humble S-38 is far more significant than exotic limited-run radios like the Sparton Nocturne or Zenith Stratosphere. The S-38 defined "shortwave radio" for millions of people. If you gather all the humans who ever owned and used a Nocturne or Stratosphere, they might barely fill up the lunchroom at my son's elementary school. The Nocturne may have influenced a narrow design elite, but it does not merit more than a sentence or two in a book of radio history. Most humans never knew that it existed!

>painting or chroming is a pretty honorable end. Better than the landfill.

If you can't resist temptation, choose paint over chrome. A future owner (including yourself, if your tastes change) can always strip off the wrong paint and reapply the right stuff. I don't know how you would go about "un-chroming" a metal cabinet.

I recognize that your message was kinda tongue-in-cheek, so *please* don't feel that I'm being too hard on you. I have felt the same temptations from time to time.

The closest that I've come to the Dark Side is stripping the unsalvageable paint from a Farnsworth GT-051 and then not repainting it because the bare radio looked so cool (http://antiqueradio.org/farn01.htm). I'm currently suffering the same dilemma over my Airline 74BR-1508A, which is much the same radio as a Belmont 6D111 but with different "Deco" lines. After I stripped off two coats of paint -- the original and the slopped-on repaint -- it looked so fine that I haven't beeen able to paint it yet. Maybe I will have to create a new group in my collection titled "black radios with ivory knobs waiting to be painted."

Radios with interesting lines usually look best with a neutral color. The Belmont 6D111 is a great example. Painting it with wild contrasting colors would draw attention the colors and detract from the wonderful sculptural effect. Think of Michelangelo's "David" painted with realistic flesh colors . . .

The bottom line is, most radios we collect are not priceless treasures. It's your radio. In the catalog of human sins, spraying a non-authentic color onto a common radio does not compare to pounding chunks off of Michelangeo's Pieta :-)

Here's a good one....

Last night I heard a story about a guy that shows up at an estate auction and trips over a Collins 32V buried in one the deceased's out buildings. He asks the autioneer if he will move it separately. The auctioneer can only get $3.00 for it. The guy that bought it for that amount then realizes how heavy it is (by this time, he has his own arms full of junque)...this guy then asks guy #1 in this story if he'd like it for $10. So he buys it. Supposed to be a true story...happened somewhere recently in central Wisconsin.

Miracles still do happen!

The guy has the right to sell every tube separately if he wants to. The big problem is the bunch of sea gulls on eBay that will put up with this horse crap. They see a dead fish and pounce without thinking. I agree with you that since every one of his items has a reserve, he would have done a little better profit wise to sell as one unit with a much higher reserve price. Then again, I think I'll pass bidding on this one as I might not get all 3 pieces and what good would the calibrator or speaker do without the 300.

This is a beautiful small in size RF Deck using Three 4CX250Bs.
It has two Vac caps, counter and really nicely constructed. Dates back
to the late 60s-70s. I need the manual and diagram so I can wire up the
plug and put this thing on the air. If not I will end up selling it.

I have a Yaesu FT-101F HF rig and FL2100F amplifier (pair 572B tubes).
They both appear to be like the usual FT-101 series, but I have never seen
the "F" version. This must be the latest in the series.
These are in excellent condition and retired from a SK estate.

Any idea what these are worth? Normally FT-101E or EE radios are around
$275-350 for excellent condition units.
The FL-2100B is usually about $325-400.
What extra for this "F" series?
Also have FV-101 ext VFO, FV101B ext VFO, FRG-7 SW rcvr, YC601B, digital
display, matching speaker, Landliner matching spkr/phone patch, YO-101
montior scope, FC-901 160-10 M antenna tuner has 4 position ant switch built
in wattmeter and SWR bridge

Any offers? (individual units)

Hi Dan,

Here is the info on the FT-101F:

Latest in the FT-101 series.
160-10 meter transceiver. 11 meters as AUX position.
Improved (PB1582) Noise Blanker.
Speech Processor and DC Converter.

For more info than you probably ever want, check out this FT-101 site:

The Manual says calibration MAY be affected. I have never had to re-
adjust C77 for a valve change,perhaps I have been lucky.
C77 is on the First VFO Unit. You will have to remove the Calibrator
Unit to get to it. There is a "hump" in the casting and behind this you
will see a hole, access to C77 is down this hole. You should also see a
threaded stud with a locknut on it. This is the corresponding Inductor
to adjust the calibration at the LF end.
You can juggle these two components to (hopefully) adjust the tracking
on the 1st Vfo/MHZ tuning.
Hope this helps.

Cheers......Keith

>I think you might get a little better service if you're a
>commercial shipper spending more than $10,000 a year.
>Just my guess. <speaking of UPS>

My shipping with them runs 7-8K per year. When broken, they try to prove you did it.
When lost, they try to ignore your claim.
When you refuse to pay their bill, they answer!

Actually, we have a very low incidence of UPS foul-UPS (pun intended). I'm still too small to get competitive rates from Fed-X, so UPS is about the only choice. The number is still to small to look at switching.

I agree about the customer counter comment. They want to open it, inspect it, and then never repack as well as you did. If you are a commercial shipper, and know how to pack, you will see very little trouble with UPS.

One hint: Always declare value to be $1000 or more...these packages are showns to supervisors at each offloading and these supers watch how they're handled. Most packages we ship really are over 1K in value. Got this straight from our route driver!

Shew

Because of the gun control act of 1968 guns are only shipped to licensed dealers, not to private parties. So it is pretty clear what is in the box leaving Sturm Ruger and addressed to Joes Discount Guns.

Pretty easy product to move on the street and easy to steal. I can see why a crook would want to take them. The real question becomes "how come they got so many crooks on the payroll."

>6KD6...It is the same socket and need adjustment of bias setting
>and adjustment of neutralization capacitors.
Another thing to watch out for is the Driver/Final Grid tuned
circuits. If the input capacitance of the new finals is significantly
different than the originally specified GE brand 6LB6s, there could
be trouble getting some of them to peak-up when aligning the rig.
I've had this trouble with non-GE 6LB6 replacements, and later
learned that not all manufacturers were very careful about keeping
the input cap to the standards.

Not sure why one would want to go to the trouble if sensitivity is
the issue. A properly working GT-550 is supposed to be good for
0.5microV for 10dB S/N ratio.

Ahh just wait until you have seen my white painted Collins 75a4 witth
pink knobs. It is soooooooo retro. I even put an 8 track in where that
stupid dial drun was....

I t looks really neat next to my lime green Valient with the flocking.

Why waste money on spray paint. We had latex houese trim paint left
over that brushed on in a few minutes. And since it is exterior paint
I can just leave the radio outrside...

Howdy, Folks.

This is an open invitation to browse http://hfradio.org, the NW7US Ham Radio and Shortwave Radio Resource Website.

This non-commercial site offers:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

From: zeitler@attglobal.net
Message-ID: <38107dd1_4@news1.prserv.net>
Source record: 77585
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have two Heathkit HD-1250 grid dip oscillators. One is 100% ready to go. The other has had the case removed because the black foam stuff on the inside of the case started to breakdown. When it breaks down is gets kind of sticky and this sticky stuff stuck to the case and to some of the coils. It does not effect the performance but, naturally, is a nuasance (sp?). So, you will need to take some time and not only clean the sticky stuff off of these coils and the case but would be a good idea to just remove the rest of it out of the inside of the case.

These units cover 1.6 to 250mhz. All coils for both units. They both work 100%. Price for both is $60 shipped. Yes, I have at least one complete manaul.

I have an MFJ speech processor model 525 for sale. Looks nice. Works good. Has four pin mic connector but you can change it to whatever you need. I used this with a Drake T4XC xmtr in the past and it really bumps up the audio punch. Had processing level and output level control and a VU meter on the front panel. Needs 12 vdc. This is an actual RF Speech Processor, not an audio unit. Converts the mic audio into an RF signal, processes it, then demodulates it back to audio, then sends it to the mic input to the xmtr. Price is $45 shipped.

I've seen this too. Although most seller do sell it complete, and a
few seller will have reasonable splits, selling the rig and power supply
separate, there are a few that take it to the extreme. One person I saw
going by the id of radiosale was selling a HW-10x.
HW-10x
Speaker
Manual
HP-23x
Manual
Power cable for the HP-23x to HW-10x

And he has done this type of sale for other things.

The manuals should be sold with the rig and separating the power cable
in my opinion was stupid.

Source record: 77445

Hi All,.

I've gota Yaesu FLDX400/FRDX400 and FL2000B, perfect condition and I love them to bits!
I have a problem though which we cannot get to the bottom of.

The FL2000N linear has developed a high SWR on input, >5:1 on some bands!

A friend of mine, Andy M0BXT, who is a valve but cannot find the problem though, so I'm now here!

Can anyone shed any light as to what would give a high SWR on input ?

The linear has full O/P but the SWR on input is too high and causes arcing on one of the wafers on the band select switch.

Any help, info or hints would be much appreciated!

Hello all,

I have a few questions about dynamotors.
If a dynamotor is rated for intermittent duty can it be used for continuous duty service at approximately 50% of its max current? Does the intermittent rating protect against thermal overload or mechanical wear? Is filtering the input/output of a dynamotor difficult? Finally, are they mechanically noisy?

Any help is greatly appreciated!

Rob

5094. FS: TV-3/TV-10/HIckock 752 Roll Chart

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-23 00:00:00 UTC
From: "Daniel J. Nelson" <djn@goodnet.com>
Message-ID: <38122E8D.332E@goodnet.com>
Source record: 77448

I have just had copied the roll charts for the TV-3/TV-10 dated May 1956
and Hickock 752/752A dated spring of 1972. The chart is on vellum and
fits the original roll mechanism.

$25 ea.

Also, in order to expand the roll chart availability, I make the
following offer:

I will copy your chart and return it and a copy for free. This will
allow you to archive or replace the original. Email me for details.

Regards,

Al --

I'll give you my opinion on what I feel the price levels are for an SX-111 today, based on my observations on ebay, talks with fellow BA enthusiasts, and from what I've observed at hamfests.

For rigs that require moderate cosmetic work and minor electrical work, I'd say around $100. For major electrical work, the price goes down.

For rigs that require minimal cosmetic work and basically work, but perhaps require an alignment and a good bath, around $140.

For rigs that are 9+ cosmetically and electrically, around $175.

Now, the seller of the ebay SX-111 indicates his rig is esentially a museum / collector quality unit, with original Hallicrafters tubes, box etc. I'd say a max price of around $200. I'm sure there are a lot of folks that would suggest changes to this price structure, and that's fine; as I said it's my opinion.

Finally, the market is driven by supply and demand. I haven't observed the SX-111 to be a rare radio, and I haven't observed the demand to be that great. Still, in my opinion, $350+ is WAY out of line, even if you add a fudge factor for higher costs on the east and west costs!!

I don't know for sure about the duty cycle issue, although I would guess that it is an issue of heat in the windings rather than mechanical wear. Filtering is not terribly difficult if you do it right. C-L-C Pi filters on the input and outputs will do the job. Remember that you are also filtering for brush arc noise so you need to pay attention to high frequency issues like shielding and inductance of your bypass caps.

They can be quite mechanically noisey, depending on their size and condition of bearings and brushes, but some are as quiet as a whisper fan.

Hi,
It could be the input switching relay contacts which may be pitted.If the output variable capacitors arcing, it can be traced to bad relay as well. I agree with Gary that the wafer of the band sswitch is not aligned to the output coil wafer. Good luck. Let us know what the problem is when you get it fixed.

Good point, Wayne. This rehab of an old near-junker is a long-standing but infrequently worked on project. No case, a very large (overkill) power transformer for the PS; but I do have the external VFO. It's basically something I redesign on paper once in a while. The receiver works. Since I last worked on it, I have aquired a URM-25G sig gen, so I should be able to tweak it better. The real issue is the PA. Although the tubes test ok, I haven't been able to get any kind of neutralization on 15 and 10. I think I'll just go ahead with the 6146 mod, since I have some on hand, and build up a smaller PS.

Thanks,
Ted W2ICV

The reason bidding is so high is that the general group of bidders are people who could not afford as a kid but now have a lot of dough. They also have an ego and do not like to lose - even if it is a bid for something overpriced. Losing a bid means a loss of self esteem. Winning is important - even if it is something that is not needed.

I sold a few BA items on e-bay that were described as in poor condition, yet sold them for 10 times more than they were worth. I had trouble sleeping, even though I had a fair description, and no longer sell on e-bay.

For many people, bidding is a sort of therapy - just a bit less expensive than seeing a real shrink.

I have a Hammarlund HQ110 for sale. This is the version with a 24 hour clock. Physical condition is good. Front panel is very good with all original knobs. The clock face has yellowed, however. Case has the usual bunch of paint chips and scratches but otherwise in good shape. The radio works, but I haven't had time to check it out fully. No manual. Would like to get $75.00 and you pay shipping.

Maybe so, but you forgot to factor in profits. Both of these companies are in business to make money.
As far as the junk-mail thing is concerned, bulk mail rates (for the really big guys who do carrier route pre-sorted mail) are ridiculously low. I'll bet snail-spam is not even break-even for the USPS. It was the flood of junk mail that forced the post office to buy all that high speed automated equipment that mangles and shreds letters. IMHO, the real political story is the pressure from the direct mail marketing industry that ruined the postal service.

Hi. Looking for a FT 747, 757, 757GX or 757GXII in good
cosmetic condition
with a non-functional transmitter. Must not be hacked up,
butchered or modified.
I plan on using it for a SWL receiver, but might correct the
TX problem at a later
date or if the finals are the problem, I might make it a QRP
rig.
I will be using it on my night stand so it has to be
presentable looking or the
XYL will be very unhappy!

Thanks,
Randy.

Clean Your Shack -- Empty The Packed Boxes -- Convince Yourself You're Finally Going to Get Organized, Make Room For Things You Will Buy At This AUCTION!! AND, let the Dallas Amateur Radio Club help with your project! DONATION and AUCTION information are included in this message.

It's that time of year again! The Dallas Amateur Radio Club is ready to
host another of its famous DARC Annual Auction events and is seeking donations to this event. More than 200 attended this auction in 1999. If you are located anywhere in the Dallas / Fort Worth metroplex and you have equipment to donate for the auction, please contact:

Bob Peters (leave a voice mail) at 877-753-9577 or email: soundimp@pobox.com; or Kim Walker at (pager) 214-816-2743 or email at W5TIT@w5fc.org

Donations will be accepted all the way through 8:00AM on the morning of the auction! Please call early, like NOW, to get your items picked up--we have warehouse room for storage!

***** ALL DONATIONS ARE TAX DEDUCTIBLE *****

Receipts will be available for your donation to this not-for-profit organization!

*****"CONSIGNMENT SALES"*****

We will auction your gear for 10% of the netted value!

*****NO COMPUTERS*****
We truly thank you for your thoughts but, please, no computers or computer equipment!

!! THEN, THE AUCTION !!

When: Saturday, Feb. 19, 1999
Time: Doors open at 6:00AM, AUCTION begins 8:00AM sharp.
Place: Calvary Family Church
Address: 801 W. Kearney, Mesquite, TX

This is the Dallas Amateur Radio Club's largest single fundraiser every year. Help us make this an even greater success than any other year!
Contact:

Bob Peters (leave a voice mail) at 877-753-9577 or email: soundimp@pobox.com; or Kim Walker at (pager) 214-816-2743 or email at W5TIT@w5fc.org

Phil -

I'm not surprised - only a handful of high-end Standard Signal
Generators go that low (my GR Type 805-C starts at 16 kHz, the more
common and more compact Type 1001-A at 5 kHz).

How about a wide-range audio oscillator like an HP 200CD or 202C, or
one of the solid-state units like the HP 651A or 652A?

Almost any function generator should also range high enough.

Following Phil's line of reasoning, 50 kHz is the second harmonic of 25 kHz...any older audio gen that isn't filtered all that well should have a second harmonic you could use.

Walt

Futher info on DRMS and Levy/Latham L.L.C. can be found at

www.drms.dla.mil

The arrangement between DRMS and Levy/Latham L.L.C. is termed a
Commercial Venture term sales contract with "proceeds sharing." Anyone
know what this means in English?

As long as you don't have to modulate it, many audio generators should
do the trick. My HP 200 CD that I bought at a hamfest for $8 goes up
to 60khz. An Eico 377 goes up to 200khz. Many function generators
will go even higher.

Are the Dentron (and subsequent companies) equipment cabinets
finished with black lacquer or flat black enamel? Getting set to "spruce" up a
few items and would like to come close to the original cabinet finish.

Thanks for any advice on refinishing.

Any decent audio generator will have very low distortion and thus
little in the way of usable harmonics.

5158. FS:Ten-Tec 234 Speech Processor $100 plus shipping

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-24 00:00:00 UTC
From: jvercellino@sprynet.COM
Message-ID: <199910242212.SAA24657@smtp4.mindspring.com>
Source record: 77412

The Model 234 is a high peformance rf-type speech processor designed to operate with most tranceiver systems. It will provide an average of 5 to 6 dB increase in average power output in SSB service. This power increase, coupled with its unique ability to tailor the speech passband, can make the difference between a solid contact and none when conditions are marginal. Unlike conventional clipper/compressor systems, Model 234 provides the capability to tailor the frequency response of the system for optimum processor punch.

$100.00 plus shipping from Chicago area.

I've realigned several SX-88s using a variable freq. function generator. Frankly though, the 50KHz realignment seemed to make no noticable difference, at least to me. I suspect we can attribute this to the highly stable IF coils Hallicrafters used in the -88. I think this was one of the best general coverage receivers they ever made.

5161. FS: Assorted sweep tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-24 00:00:00 UTC
From: ovrreactor@aol.com-nospam
Message-ID: <19991024191152.14045.00000548@ng-ce1.aol.com>
Source record: 77415

I am selling 61 assorted sweep tubes (list below).

I recently purchased a garage full of parts from a retired TV & radio repairman. I'm an audio guy and I don't use sweep tubes, so I'd like to sell them off. I was told by the seller that some were new, some were used, but he wasn't sure which were which, and most weren't even in their original cartons (some were loose). I have checked all of these tubes on a B&K 667, and have verified that all of the tubes listed below test LIKE NEW, have no grid emission/gas/leakage, and have no shorts. I have also re-boxed the loose tubes. (I rejected any questionable tubes during testing). During my testing, I made some judgements regarding the physical appearance of the tubes. The "rating system" that I used below ranges from "NEW-VG-GOOD-USED". The tubes marked "USED" may have discolored glass or significantly burned getters, but they STILL test "like new".

MAKE ME AN OFFER, I'm a motivated seller!!! Offers to buy the entire lot will be considered first, but I MIGHT consider breaking this lot up.

(FYI, if these tubes were purchased as NOS from that tube-selling place in Arizona, the cost would be over $1600...not that I'm expecting to actually GET that much.)

Interested buyers, please respond by email.

Regards,
Tom Mitchell

It seems to me that I can generate a very stable 50 KHz quite easily with a digital divider and a
good crystal source. I seem to remember my old receivers having 100 KHz crystal calibrators
when they didn't have easy TT logic to develop harmonics to light.
What's up with the focus on stable generators?
(Or am I too far gone on the NON-linear path?)

A long long time ago I used both the PE 101 and PE 103 dynamotors. The 101 had a high frequency mechanical whine. The 103 was installed in the trunk and required about 1 second to come up to speed. You could hear it wind up.

RF noise and filtering have already been mentioned. VG filtering is absolutely required.

I'm thinning out the collection some, and have the following stations for sale or trade. All have been in service in my station. I prefer trades, so what have you got?

1. B-Line: R-4B, T-4XB, AC-4, MS-4, Original Manuals, Drake Boxes.

This is a nice B-line and works great. It is in cosmetically Good to Very Good condition. It was back to Drake for service in the past 5 years. Front panel perfect on both rigs. No scratches on top or sides of cabinets. Some small chips on front edge of T-4XB. The R-4B calibrator does not work properly for some reason. I have not torn into it to see why. Everything else works as it should. Chassis are a little dusty, and have some pitting as is common with these rigs. The T-4XB works great and is putting out 90-100 watts on 40 meters.

Price: $500 plus shipping, or prefer trades (See List Below)

2. C-Line: R-4C, T-4XC, AC-4, MS-4, Original manuals.

This is my extra C-line and it is a nice one. The R-4C is one of the highly sought after early models that has a tube lineup similar to the R-4B (4position mode switch). It has extra crystals for 160, 17, 12 and 10 meters. The T-4XC has full output and has extra crystals also. Complete with AC-4, MS-4, original manuals and Interconnect cables. It is a great station.

Price: $600 plus shipping, or prefer trades (See List Below)

3. TR-4Cw, RV-4C, AC-4, Original Manual TR-4Cw, Copy of RV-4C manual

Very nice both cosmetically and electrically. Front edge of the TR-4Cw's cabinet has a few small nicks, but does not detract from the radio. The RV-4C is as close to mint that I have seen. Full output.

Price: $600 plus shipping, or prefer trades (See List Below)

I am interested in trading for any of the following: Collins S1-Line equipment, S3-Line equipment, 75A4, 30L1, KWM-2/2A. Kenwood 930Sat, 940Sat, 830S. Yaesu FT-900, FT-990. Hallicrafters SX-115. Drake L-4B, R-8. As you can see I am open to almost any HF gear. If you have something you want to trade, let me know.

Note on Shipping: I ship via UPS, and will ship each piece of equipment separately, double boxed. Lots of bubble wrap and peanuts. You will only pay what the UPS cost is. No "packing" charge.

You can see pictures of this gear in my shack on my web page below
<http://www.mindspring.com/~ekugrad/Index.html>

Clean Your Shack -- Empty The Packed Boxes -- Convince Yourself You're Finally Going to Get Organized, Make Room For Things You Will Buy At This AUCTION!! AND, let the Dallas Amateur Radio Club help with your project! DONATION and AUCTION information are included in this message.

It's that time of year again! The Dallas Amateur Radio Club is ready to
host another of its famous DARC Annual Auction events and is seeking donations to this event. More than 200 attended this auction in 1999. If you are located anywhere in the Dallas / Fort Worth metroplex and you have equipment to donate for the auction, please contact:

Bob Peters (leave a voice mail) at 877-753-9577 or email: soundimp@pobox.com; or Kim Walker at (pager) 214-816-2743 or email at W5TIT@w5fc.org

Donations will be accepted all the way through 8:00AM on the morning of the auction! Please call early, like NOW, to get your items picked up--we have warehouse room for storage!

***** ALL DONATIONS ARE TAX DEDUCTIBLE *****

Receipts will be available for your donation to this not-for-profit organization!

*****"CONSIGNMENT SALES"*****

We will auction your gear for 10% of the netted value!

*****NO COMPUTERS*****
We truly thank you for your thoughts but, please, no computers or computer equipment!

!! THEN, THE AUCTION !!

When: Saturday, Feb. 19, 2000
Time: Doors open at 6:00AM, AUCTION begins 8:00AM sharp.
Place: Calvary Family Church
Address: 801 W. Kearney, Mesquite, TX

This is the Dallas Amateur Radio Club's largest single fundraiser every year. Help us make this an even greater success than any other year!
Contact:

Bob Peters (leave a voice mail) at 877-753-9577 or email:
soundimp@pobox.com; or Kim Walker at (pager) 214-816-2743 or email at

5172. Ceramic terminal strips question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-24 00:00:00 UTC
From: Fred <fstewart@mediaone.net>
Message-ID: <3813C953.7EDF0EA4@mediaone.net>
Source record: 77426

I have a Hickok Electronic Marker Generator that is built upon ceramic terminal strips. These strips are supported away from the chassis by nylon standoffs. Can anyone give a clue to the terminally clueless as to what this connector system is?

There seems to be some variety in the capacity of the strips; my box has 1, 3 and 9 up component notches and 1/2" standoffs (some are 1/8").

The cut-away view of the ceramic connector looks as

```
/\
/ \
/ \
/ \
-- --
/ \
----
```

and the dovetail fits into the nylon standoff. I would like to get some fresh nylon standoffs. Any ideas?

Temporarily disconnect the output of the BFO and calibrate it to 50kc and use it as your source. The 50kc IF isn't touchy but it will make a difference in selectivity and U/L sideband tuning.

-Bill Meacham

Yeah, but when the return address is Ruger, Inc, or the address of a gun shop, it is easy to see how the thieves figure out the contents.

I think you are reading far more into this than is really there. UPS is a company with many problems, and an uncertain future. I agree that removing the thieves and putting better security in place is the better solution. Still, it appears UPS took this action because they were paying out a lot in claims to clients who shipped pistols through them.

Sounds like the input switching mechanism is not switching the proper circuits in relation to the amps output - for instance, 80 meter input switched in, but bandswitch is in 40 meter position...

5177. FS: Drake MN-75 and MS-4

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-24 00:00:00 UTC
From: k9sqg@aol.com
Message-ID: <19991023213503.20101.00000341@ng-cm1.aol.com>
Source record: 77460

Have for sale an MN-75 tuner. Excellent condition, a "9" I'd say. 1.8-30 Mhz including WARC. Rated at 200 watts but suspect it will take more. Includes built-in wattmeter and antenna switch. Inside is beautiful too, no arcing, pitting, or discoloration of contacts. $85 plus UPS shipping, conus only.

MS-4 has a beautiful front grill, but case has some scratches and could use a repaint. $40 plus UPS, conus only.

Thanks for reading the ad.

I have a Howard 430 communications receiver made about 1939 which I am trying to restore. It is in fair condition except the dial glass/plastic is missing. Does anyone know whether this receiver had glass or plastic covering the dial? If plastic, was it a fairly hard and rigid type, or was it the more flexible type. Was plastic even available for this use in 1939? All of my other radios of this vintage have a glass plate. Any "OT OPS" remember? Thanks. Robb WB8BHU

But the reality of it is that anyone can get new HF equipment, so it's rather irrelevant who gets R-390s or other surplus, at least from a national security standpoint.

If those other than hams are getting first choice on surplus, we need to take that up as a separate issue.

> industry that ruined the postal service.

Actually, I think you got it backwards. Most junk mail is "presort",
sometimes down to the individual carrier route! The PO loves that
'cause it takes as long to sort a bundle of the stuff (until it gets
to a carrier route) as it does a single piece of first class mail.
Presorts don't have to go thru the machinery that individually
sorts first class letters!

This doesn't just apply to junk mail. 2nd class mail (newspapers
& magazines) gets the presort treatment as well. I know this
'cause when I was a kid I did mail presorting at a newspaper.

In some cases the presorted mail bypasses nearly the entire postal
system and is dropped off the branch from which it is going
to be delivered. I think this applies to a lot of junk mail...could
you imagine every one of Publisher's Clearing House "You Just Won
$1,000,000" envelopes all being dropped off in one place?

What's more, bulk mailers deliver & drop off loads of mail with
postage affixed, as well as presorted, which saves the PO
loads of expensive time on counter clerks and box pickups.
Then, (with the exception of 2nd class mailers) if a piece of
bulk mail gets lost,not only does no one complain, the
undeliverable stuff goes in the dump, not on an expensive
return trip.

I heard by way of a couple of Californian aerospace engineers a few
years back that some surplus stuff is routinely loaded into 20 or 40
foot shipping containers thence transported to Russia and China at cheap
rates as salvage (just like used tires to South America and Africa).
Too much touble to deal with the public---just let the salvage yard fill
up then load and ship.

What is Levy-Leatham doing with it?

I got off my lazy backside and looked up the phone number and got directions.

Phone: 301-390-1020

Directions from Washington Beltway (I-495):
Take Rt. 50 west (exit 19A) toward Annapolis.
Exit at Rt. 197 and bear right (south).
In less than a mile, turn right at light on Mitchellville Rd.
Go about 2 miles; museum is on right in a two-story red house at corner of
Mitchellville and Mount Oak Rd. If you miss the turn-in on Mitchellville Rd.,
just turn right on Mount Oak and turn right at the first driveway, which gets
you to the same parking lot.

I believe Levy-Leatham is offering the surplus they are currently getting for sale or auction out of Stockton, CA. They may have worked out other deals I'm not sure. They were holding auctions at the bases where the DRMOs are offering the surplus.
As far as I know as of now the Radios & Transmitters are still a demilitarized item and haven't been offered publicly yet. If anyone has any up to date info on that subject please let us know. If they decide to change the Demil code on them then they will go to Levy-Letham or such.

5209. how to generate 50-khz signal for alignment

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-24 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <HYGQ3.345$iH6.4950@sea-read.news.verio.net>
Source record: 77492
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

After recapping my Hallicrafters SX-88, I turned to the alignment section and discovered that the second IF section is aligned at 50 khz (a little more about that IF on this page: http://antiqueradio.org/sx88manual.htm).

Needless to say, my flea market signal generator does not generate a 50-khz signal. I spent two hours at yesterday's Rickreall hamfest in Oregon, pawing through mountains of old test equipment, without finding any such critter.

Any clues on how to generate this signal?

The only idea I've had so far is to tune the generator to the lowest multiple of 50 (say, 200 khz) and try to align using a harmonic. My generator doesn't seem to work too well at that low frequency, however -- its signal becomes fuzzy and extremely weak . . .

I suppose I could pretend that the receiver is already correctly aligned. It works pretty well. But after replacing fifty caps you sort of assume it could use some tweaks.

Thanks.

Sounds like the same ceramic strips used in Tektronix 'scopes.

Besure to use silver solder to re-flow and re-solder these as rosin-core solder
will eventually de-laminate the "tinned" surface in the notches.

You can use solder tha has a silver content like 2% or so, not silver solder
that silversmiths use(d).

>> Second, I rather doubt
>> that anyone shipping a gun would advertise that fact by printing "ENCLOSED
>IS YOUR GUN"
>> on the side of the box. Thus, if UPS employees are swiping handguns off the
>delivery
>> truck, what they are *really* doing is stealing SMALL BOXES.

Actually, it is difficult for an UPS employee to seal ANYTHING! The package center in Louisville requires employees to pass through metal detectors TO and FROM work. Cameras are in place in the sorting warehouse, and their loss prevention people are "mutants" developed from the gene pools of SS officers, KBG agents, and IRS employees!! Well, not really mutants, but they keep a keen eye peeled.

The 2nd greatest threat of loss is if a driver stops for delivery and forgets to lock his or her truck when they go inside with the package

The greatest loss is "residental delivery". If you don't mark the package "adult signature required", it will be left at the front door!

UPS really hasn't lost that many guns. I think they are jsut trying to suck up to the present bunch of dunderheads in Washington.

Source record: 77345

>If a dynamotor is rated for intermittent duty can it be used for continuous
>duty service at approximately 50% of its max current? Does the
>intermittent rating protect against thermal overload or mechanical wear?

If rated for intermittent, they mean intermittant load. Probably a heating question, as the brushes and commutator obviously are selected for a certain ampacity, and one hour of that load continious wouldn't be any different than 2 half hour runs. Heating however, is the problem with wire swelling, cores and axles swelling, etc. You probably would be safer with a 25-30% degrading in load, maybe less.

No scientific evidence here, it depends upon how they designed the dyna in question.

>Is filtering the input/output of a dynamotor difficult? Finally, are they
>mechanically noisy?

LC filtering was commonly used. Clean brushes and commutators go a long way to cleaning up the output. They are less noisy mechanically if shockmounted. Most of us guys who love the old stuff, however, love to hear those old dyna's running!

Trade even up: Viking Valiant 1 for Hallicrafters SR-150 or 400 with power supply/speaker, in like condition.

Freshly tubed, solid state modules in place of 846's. Front panel is exceptionally
nice; nearly mint. A few scratches and minor knicks on the upper lip.
Only draw back, someone widened out the right hand manual/ptt
switch hole. An on/off flange hides the flaw nicely. All knobs and inserts intact and like new. Crystal knob cover is there. Lettering perfect. VFO is beautiful.
The maroon cabinet has been painted, not a perfect job, but not bad.
Has a transmit-receive relay built in.

Let me know what you have!

Regards,

Cary Fries

Not cut-down 654 legs- these are "the Real McCoy."
A partner and I have found legs for this highly desirable
WW-II radio. $40 for a set of four plus $4 shipping
anywhere in the U.S., actual elsewhere.
You're not going to find these again and when they're gone...

Thanks,
Dave Stinson

5230. Re: FEDEX--A Great Company to deal with!!!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-25 00:00:00 UTC
From: "George R. Gonzalez" <grg@umn.edu>
Message-ID: <7v2gmkdkt1@news1.tc.umn.edu>
Source record: 77363

One day last week I went to UPS to drop off a bunch of packages.
They've been saying lateley to pack stuff for a 3-foot drop, and 70 pounds
of pressure on any side. That helps, but what really got my attention
was when they left the door open to the back room, and you could
see a conveyor belt with a downward-spiraling section.

The packages were tumbling end-over end down this maybe 40
degree downslope! You not only have to pack for a 3-foot
drop, but also for dozens of tumbles and
crashes against other packages coming down conveyor belts!

Remember, UPS takes packages up to what, 150 pounds?
So just imagine your package getting hit from behind by a
tumbling 150lb package! Better double-box and use lots
of resilient packing.

Don't do like a well-meaning fella did when sending me a
boatanchor-- It arrived all smashed, as he used rigid
styrofoam on all sides. That just transmitted the shocks
directly to the chassis, bending it all to heck.

I have no problem with UPS, I just pack things for the worst
possible case, then pack some more. Boxes are cheap,
many boatanchors are irreplaceable. There's no excuse
for saving $2 on shipping by using a smaller box, but
wrecking some nice old radio.

-- George

Not meant to start another thread on ebay, but this type of thing is unscrupulous at best:

RARE HEATH HW-101 SB-101 CB 11 METER CRYSTAL!
Item #182756483
Expand the capabilities, value and resale value of your Heath HW-100, HW-101, SB-100, SB-101, SB-102 with this Magic Crystal. Simply remove the 10 meter crystal from your rig and install this crystal and you have 27 MHz operation (the 'beat' frequency of this crystal is
37.39500 MHz). You can transceive on SSB or CW on 11 Meters! Even install it to increase the resale value of the transceiver by magnitudes to a CB'er! Crystal is Brand New! Buyer prepays with shipping within 7 days of auction close.

I've sent a note to SafeHarbor@ebay.com about this, but wonder if anyone would like to comment
on the legalities of this.

Source record: 77376

Since the Vibrator power supply put out 300 volts at 90 ma., I would guess that the receiver current draw is on that order. Add up the filament currents (I estimate much less than 5 Amps without actually adding them up) to specify the filament transformer, use a silicon diode bridge for the rectifier on the output of a 290 volt transformer, and you are there.

The output transformer is a little harder since the cathode of the audio driver is returned through the secondary for negative feedback. 6V6's like to see 5 to 8K ohms load, and the original tranny had 2.5 ohms output, tapped for the feedback at an unknown impedance, but I'll bet it was around the center at < 1 ohm. This was probably done to slightly isolate the feedback from the highly variable (with frequency) speaker load. Multiple secondary or tapped secondary output transformers are getting rare, so some other feedback scheme may have to be developed.

Hi and thanks for reading;
I just purchased a Kenwood 820s with VFO except for the cable between the VFO unit and the HF unit went missing. I have the pin-outs for the Kenwood 820s side, but need the pin-outs for the 820VFO side. Or, is it a sraight through connection?
Can some one please help.
Thanks and '73

Perhaps you can use your audio generator tuned at 16,666.7 Hz
(use your frequency counter to get this frequency exactly :-)
and tune the IF circuits to the third harmonic.

Its probably not legal for CB. As I recall, CB gear has to be FCC
Type Accepted for the service & Heathkit ham gear was almost
certainly not. Also, there was a rule that CB gear could only be
serviced by repairmen certified for "type accepted" equipment work.
Obviously, slamming in a new converter XTAL busts those
considerations. But have you ever met a CBer that read the rule
book?

They left a Rolex watch next to my door on a Saturday that was for my neighbor... The UPS driver had no way of knowing what was in the box, but he delivered daily to my house, so figured any box with a Marlou Ct. address on it, was for me... We were gone for the weekend and my son just threw that days pile of boxes into my office before going out to get wasted with his buddies... Then it was a couple of more days before I opened the package, and looked at the label when my eyeballs went tilt... So I put the watch on my wrist, grabbed a couple of beers and went next door to show off my new Rolex... His wife was really frosted because it was a birthday present and two days too late to boot... She had been burning the phone lines to UPS, who claimed it had been delivered to "them"...
Hey, is this a great country or what?

Phil: this one's easy -- get an audio signal generator. They usually go
up to 100KHz or so.

I had the same dilemma with my Hammarlund HQ-180, with a 60KHz 3rd IF, and
my SX-100, which has a 50.5KHz 2nd IF. One spring I picked up a Heathkit
audio generator at Dayton -- I can't remember the model number, but it's
grey, with a large voltmeter on the front panel. I swapped out two of the
fixed resistors in the RC timing circuits for the 50KHz and 60KHz settings
with 10-turn trimmer pots, and calibrated them with a frequency counter for
50.5KHz and 60KHz as closely as possible. I don't use the generator for
anything else, so I did not see a problem with "permanently" setting 50 to
50.5. I use this to set the low IFs on these two receivers.

If I remember correctly, the alignment instructions for both indicated
that the signal be unmodulated for this step, which would mean that the
audio generator is up to the task. If the SX-88 requires it to be a
modulated signal, then I think you've got some searching to do...

Hi...I am looking for a manual for a Racal 6217 HF receiver. The exact model number of my receiver is RA 6217A (1w)8. I am assuming that the (1w)8 means that this radio has a 1 watt, 8 ohm output as well as the standard 600 ohm on the rear terminal strip. Please advise of price and copies are okay.....Also....Does anyone know where you can buy the dial lamps for this radio?

tnx Dave

Just purchased a used MK-1 memory keyer by Autek Research. Keyer
portion works fine but memories do not. When one of the message
buttons is pressed and released for either recording or playback the
memory operating light only comes on for as long as the message button
is held in. I tried swapping a few chips around with no luck. Has
anyone had a similar problem or does anyone have any ideas on where
the problem might lie ? Thanks.

I saw that too, and had to chuckle. It's not illegal to install
such a crystal, or to receive CB transmissions with the radio
once it's been modified. It's illegal to transmit, however.
Still, it's silly!

Whenever I ship a boatanchor I reinforce the sides of the box with cheap Masonite bought at home depot. Five bux buys a sheet big enough to reinforce all 6 sides of a box. I've NEVER had a complaint, and I've shipped several SP-600s this way (one of the heavier and bulkier BA receivers). Cheapo 1/8" plywood also works. But as George said you hafta cushion all sides with something relatively soft. I use peanuts, but I've recived radios packed with furnace filter material ("hair") that seems to work well also.

Hi,

I'm having a shack clearing exercise (well my wife is) and
I've an old boatanchor for sale.

It's a GEC BRT400 communications receiver (circa 40/50s).
Must surely be a collectors item and still works very well.
On a scale of ten it's overall condition must rate 8 - 9.
Performance is excellent, good sensitivity and selectivity,
(I copied Radio St. Helena on it a few evenings ago with
a simple antenna) and plenty of good quality audio output...

It comes with a spare set of new valves and the ORIGINAL
handbook plus a photocopy (so you don't mess up the original!)

Anyone interested in what must be a fairly rare receiver. I
understand these were used by the BBC for monitoring purposes.

Cheers,

John

It is with some regret that I must inform others of a less-than-honest fellow ham.

In March of this year, I contracted for a Hammarlund HQ-150 from Michael J. Harris, N9LIF, of 1000 Champagne St., Merrill WI, 54452.

The shipment was severly damaged en-route by UPS, and returned to sender. An e-mail in May/June informed me that UPS had settled and that my money would be returned. I sent a registered letter/ Ret. rec to him last week asking what the problem was and it was returned to me "REFUSED BY ADDRESSEE" by addressee. I am filing with the FED and his State Attorney General's office. We'll just have to see.

The Pioneer Valley's best amateur radio auction is just around the corner. Last year's auction had over 100 attendees. Lots of good stuff was bought and sold. If you would like to participate in this year's event, here's the particulars:

DATE: November 5th, 1999

TIME: 7:30 PM

PLACE: Feeding Hills Congregational Church
North Westfield Street
Feeding Hills, MA 01030
(next to Dunkin' Donuts)

RULES: Amateur radio, computer or electronic equipment only.
Mark each item with your name and call (if licensed)
10% of selling price goes to the HCRA
If it doesn't sell, you take it home!
Club donations are always welcome!

CONTACT: Jim, WA1ZUH (jmullen@rockys.com)
Irv, W6IS (w6is1@juno.com)

*** *** BONUS RAFFLE !!! *** ***

An ICOM IC-T8A, tri-band HT will be raffled off. Tickets are only $5 and no more than 200 tickets will be sold. $5 will get you a great chance to win a nice HT. Second prize is an ARRL Antenna Book CD. Tickets will be available during the auction, and the raffle will be drawn immediately after the auction. You need not be present to win.

Anyway, thanks for reading this and hope to CU at the auction.

Message-ID: <381795C3.A3C3C5F4@vbe.com>
Source record: 77204

Hi guys..... I picked up a "whatsit" in a sale. The guy I bought it from thought it was a signal generator but I'm not so sure. It is very well made (a bit dirty yet as I haven't cleaned it up yet) and contains some very nice components that are pretty much like new. It has a really nice vernier drive dial, contains a coil wound on a form, a 6AF11 tube, speaker, phone jack, two transformers, 3 jacks on the left side etc..... What is it ???

See pics of it at:

front : http://www.vbe.com/~badger/whatsit/front.jpg
left side : http://www.vbe.com/~badger/whatsit/left.jpg
right side : http://www.vbe.com/~badger/whatsit/right.jpg
inside : http://www.vbe.com/~badger/whatsit/inside.jpg
inside top : http://www.vbe.com/~badger/whatsit/top.jpg

Case is a "silver/gray hammertone" but I'm a challenged digital photographer so..... could this be a transmitter ??? Lets see who can figure this one out <grin>.

Thanks

Mike

I'm looking to acquire one of the 70's era S-100 bus computer systems like the Northstar Horizon or Ithaca InterSystems DPA-1. If you have an S-100 based unit like that please contact me and see what we can work out. Purchase only, I don't have a trade. Also would be interested in an S-100 based modem if you have one. You can contact me a chipsndips@snet.net.

Thanks

Message-ID: <19991027031446.10043.00001694@ng-fs1.aol.com>
Source record: 77248

Hey out there in radioland. Although I'm an audio guy, maybe
you guys can help me. I recently purchased a vintage pair of
DUOVAC VT2 triodes (205B). The only problem is that the
pin configuration is slighly different than the standard 4 pin socket.
The VT2 has 4 evenly spaced, even thickness male pins that do
not quite fit in my female tube sockets. I have heard through friends
that adapters exist. I would be willing to pay well for a pair of these
adapters. The "standard" 4 pin sockets I am referring to fit tubes like
2A3's, 10's, 45's, 300B's, etc.
My name is Tristan, and my E mail is DoralDJ@aol.com
Beeper (303) 201-6454

About 4 years ago
I was asked to move some rubbish
left over from building work by a local builder
In the rubbish in a black dust bin liner was
a RCA Victor Canadian 1943 19 set
I dusted the plaster off found out a
thing or two put 12 volts to it and it works.

FREE Found in rubbish beat that

Because of this find, it has sparked an
interest in radio / wire less and I have
got my first ham licence (novice)
I hope to be using, Morse by next year and then
my 19 set will rule the air waves
(honest) I have been told its only good for 5 watts.
Any one know the approximate output from my rig ?
thanks

Is the "19" set the same as the MK-II? Had both English and Russian script on the front? Or am I thinking of some other set? Anyway, as I recall, the output was an 807, which is good for about 50 watts in CW. Don't remember the internal power supply in the MK-II though - but I thought it was about 25 watts output using some kind of controlled carrier modulation.

5355. Re: Tube tektronix gear for parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-27 00:00:00 UTC
From: "George R. Gonzalez" <grg@umn.edu>
Message-ID: <7v77gv$r4c$1@news1.tc.umn.edu>
Source record: 77266

Which brings up a moral dilemma--

When I try to sell Old Tek scopes, they never sell, as it costs $50 to ship them,
and nobody will pay more than $14 for one.

So I've been forced to strip them for parts. The tubes, if there are any Mullards
or Telefunkens, will sell for much more than $15, and the shipping is $3.

The power trrannies I save for future tube projects. The precision
decade capacitor gets saved, as do the FP electrolytics.
Most everything else gets tossed.

Now am I a bad boatachorite? I don't have the room to store these things
forever, and the shed is full, and the attic floor is already buckling in
places.

Yep, its Got English & Russian script on the front.
It has a power supply, that is switch able from 12 to 24 volts.
It has RCA Victor written on a plate with,
M 111. The serial number,C-81251
has been stamped on the plate
1943 is the age on the plate.

I have managed to get a manual for the set,
In it I am told to expect on the A set, using an 8 foot rod
a range of 10 miles using mike, and 15 miles using CW.

On the B set, using a 20 inch rod,
1 mile max average reduced to 300 yards in built up area.

This of course is in a tank and
I expect you are advised to demolish any obstacles
that impair you transmissions.
If only we had the same privileges.

>On the B set, using a 20 inch rod,
>1 mile max average reduced to 300 yards in built up area.

The B set would be illegal to fire up in this country. It was a modulated oscillator with very poor frequency stability, and as I recall, was not located in any amateur band. Most of us that had those sets ripped out the B part and used the space for a better modulator.

>This of course is in a tank and
>I expect you are advised to demolish any obstacles
>that impair you transmissions.
>If only we had the same privileges.

Wouldn't it be nice. By the way, welcome to the ranks of amateur radio enthusiasts. I got my licence in 1955, but lost interest in 1965, when I couldn't compete with the "California Kilowatts." I got my licence back last year, and have restored some old Hallicrafters receivers, (SX-117, SX-28, S-36) and am in the process of building a transmitter - vacuum tubes of course.

Source record: 77282

I have just one mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the two "85"s to reply or call 334-347-5281.

I have a ts-450 in grate condition. It has always worked grate no complaints. I am selling so I can go racing so I need to sell 1 of my many radios. I also have the vs-2 voice board for the frequency read out, and the yk88sn-1. I will take $650 for the radio strait, and $45 for the vs-2, and $55 for the yk88sn-1 naro ssb filter. or $725 if you just want to by everything. I have the manuals for the radio and the vs-2 and the box for the vs-2. All are in good condition and work grate and I have all that come with them mic, power cord etc. If interested email racerjm3@aol.com prices do not include shipping

I have an SB-102 (since 71 or so). Had ordered an SB-101 but Heath
informed me of discontinuation, and shipped me the 102. The primary
difference was the LMO (VFO "linear master oscillator").
The SB-102's LMO is solid state and powered from the filament xformer,
it has it's own rectifier/filter on the 12v rail; the 101's LMO
had one or 2 tubes. Good receiver espec w the 500Hz CW filter.
No WARC band coverage.

It has already spread. AFAIK, it is illegal to listen to any transmission
that is encoded or encrypted in any way where the intent is to block
unauthorized reception. A good example is scrambled pay-TV broadcasts.
"Public Airwaves," my ass.

Source record: 77099

The differences I recall:

I built and still own the SB-102.

Believe the SB-100 and SB-101 had an LMO (Linear Master Oscillator (or VFO))
which used a vacuum tube. The SB-102 had a solid state LMO which was prebuilt
by TRW and had a bit better stability and linearity than its predecessors.

SB-102 also had a more sensitive receiver RF amp front end.

The 2 mtr transverter had a built in AC supply, but I never owned one.

From: DavidC <eDoc@netzero.net>
Message-ID: <s1i2n7itr0840@freenews.remarq.com>
Source record: 77101
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have acquired a small portable G.E. rig with the following identifying data on the plate:

Radio Combination: HF 11W
Option: (blank)
Serial: AO 6712
FCC Filing Type: ET-28A

It is 12" long, 4" wide and 9.5" deep.

It has volume and squelch controls, some sort of switch that one pulls in and out, a red and a gold lamp, and a 4-pin mic jack all on the face. There is also a 5-pin male jack on the side and a so-239 jack on the opposite end of the side with the controls.

Help please? Any info. is appreciated, a schematic and/or manual would be awesome!

Thanks! & 73, DavidC K1YP

Mike,
I'm only taking a guess at it but judging by what looks like a GE "Compactron " tube, and the oscillator coil; I'd venture to say it's a grid dip meter or possibly a regenerative receiver. I wouldn't rule out a signal generator though. Someone had a HV supply connected to it as witnssed by the male octal plug on the side. Interesting.....
Good Luck and 73.

Mike,
I would vote for Regenerative Receiver.
Main Dial = Tuning
Upper Left = Bandspread (small value variable paralleling main)
Lower Left = Regeneration
Upper Right = Volume
Can't see last control

Terminals on side are antenna connections, and ground. Do they connect
to the plug in coil?

Agree with compactron, am thinking triple triode. Are there three
structures within the tube?

Probably one section Regen Detector, transformer coupled to one section
audio, coupled to audio output stage.

Originally there was a similar box with a matching socket in the side
containing the power supply.

Nice looking unit, after cleaning it up, you might start tracing the
wiring out and learn what it is. Good hunting. . .

That's pretty close to how it was here until the cell phone companies bought &/or snowed enough congressmen to make it illegal to listen, even if the stupid phones aren't scrambled. The companies didn't want to have to buy the scramble technology but still wanted to assure buyers (falsely) they had "privacy" using these little radios. Frankly, I hope lots & lots of people are ignoring this ignorant legislation, perhaps it will go away one day. The real problem I have with it is that once the power to ban listening is granted, it is easily extended by the stroke of a mere beaurocrat's pen to cover any frequencies/stations deemed "dangerous" or "politically incorrect" etc. Not all that far from the Soviet Union banning Radio Free America, etc. "Civil disobedience" has its place.

From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <7v9c8h$78s$1@mailint03.im.hou.compaq.com>
Source record: 77220

I have a GRC 106A that I use without the Amplifier.
I have a number of problems with this set, one of problems (I think) is that the CW output is carrier only.
I have the technical manual and what the circuit description suggests is that the CW should be modulated with a 2 kHz tone. Am I right with this assumption or is the 2 kHz only used for side tone.
The side tone it self is working fine.

Should someone have a spare 1A5 module for the GRC 106A I�m interested in buying it because I also have lots of problems with the ALC circuit.

Boy ..... hams are a great bunch. I had posted my "whatsit" on this list as well as the qth.net homebrew, boatanchor and heathkit lists and did I ever get the replies ! As I had suspected many figured it was a receiver of some sort but I sure got some interesting other opinions <grin> too. Two OM actually said they remembered seeing a rig like this in an old GE Hobby Manual and I was surprised at how many actually suggested it was a regen..... God, I really feel young now <grin>.

But the definitive answer came from a ham on the homebrew list.... from of all places Spain ! In fact he not only identified it but he has the complete article from the 1965 GE Hobby Manual on his web page ! It's a "One Compactron Regenerative Receiver" that uses 4 plug-in coils and covers 250kc to 16mc.... quite a spread ! The site even has the plans for it's separate power supply ! Fine Business Indeed !! I'm told that it is a VERY hot receiver and really works great ! The few hams who knew exactly what it was told me I found a "treasure". Now..... to find 3 more coil forms (I only have the 1.75 - 6.1 mc) wind the other coils and build that power supply ! Who knows.... with all the talk here about regen's maybe one of you will build one too..... isn't the 'Net great !

Here is the site and info courtesy of Jose V. Gavila, EB5AGV !!!!

Hi Homebrewers!

I have the following Radio, and electronic equipment for sale. Will consider trades for Hand held Scanners with full 800 coverage. All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address. Thanks
EJ (KC5EPI)

All Tube Items:

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Non Tube Items:

HTX-202: Radio Shack 2 Meter HT. Works good. Slightly chipped where the battery slides in, but does not affect operation. No nicad or antenna, but I will include the AA Battery pack with the unit. $80

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $200

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $125 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

Realistic Patrolman-6: Portable AC/DC Receiver with AM, FM, air, High/Low VHF and UHF bands. The radio works fine but the dial cord must be disconnected. Dial not moving. AS $15

RS Pro 30 Scanner: Hand held 16 channel scanner. Looks & Works good, but the battery cover plate is missing. Make me a reasonable offer.

Source record: 77230

Hello All,

I'm looking for manual or schematic for a Philco Ford PS 400 power supply. This is a 1968 all solid state unit with 0-40v, 0-400v, and 0-(-100v) supplies plus AC filament taps. I've tried the usual sources for manuals without success. Any help is appreciated!

This may not qualify as a boatanchor but it sure is handy for repairing them!

Regards,
Rob

Message-ID: <WocYOOBDZCWGwexBckhMxNNs0n4e@4ax.com>
Source record: 77232

The subject DMM is a classic lab quality multimeter built in 1980 and finally out of calibration. Unfortunately I no longer have the manual and Optoelectronics doesn't EVEN have records on it any more. Does anyone here have a copyable manual? The November 1980 QST has way more information than the manufacturer does at this point.

Help!

5427. Heath SB-series questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-28 00:00:00 UTC
From: Steve M <steve@netfeed.com>
Message-ID: <HR0S3.1041$Ck2.19583@nuq-read.news.verio.net>
Source record: 77236

I have a few questions:

What are the differences between the SB-100, 101, and 102?

Does anyone know if the SB-650 freq. readout will work with the SB-110 (6M)?

What is the model of the SB series 6/10M to 2M transverter and what does it
use for a power supply?

I am interested in purchasing one of the above transceivers(100,101,or 102)
as well as the
transverter, I don't suppose anyone would have one of those transverters for
sale?

Thanks,

Steve, WA6VCR

Source record: 77238

Hello, and thanks for reading...

I have a Mosley TA-36 5-element triband yagi for sale (curently assembled
and on the ground, just took it down off the tower).

I bought it used a while back, it never has worked 100% for me, possibly a
bad trap, though they
all look OK (or maybe I just assembled it wrong!) ... It currently works
w/low swr on parts of 20 meters but has high swr on the other bands. I have
a new balun/feed obtained from Mosley, and the manual....

$75 and pickup in Denver NC, 22 miles north of Charlotte NC on highway 16,
on the west side of Lake Norman...

tnx and regards,

brian

FA on e-bay:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=189143047

WWII-era US Navy transmitter
ca. 1944
Made by Aircraft Radio Corporation

This great-looking 5.3-7MC transmitter is quite unique. It has one 1626, one 1629, and two 1625 tubes which all appear to be in good condition. The crystal socket is empty. There is a locking hinged hatch over the 1626 and 1629. It's missing a locking lift-off hatch over the pair of 1625's, the screws for the cover, and the base plate - but otherwise it's intact. Underneath the RF deck are three nice big air-variable capacitors. All instruction plates are clean and legible. Front-panel controls all have knobs beside them that, when twisted, lock the companion control. Controls are Frequency, Antenna Inductance, and Antenna Coupling.

The top front plate reads:
"T-21/ARC-5
28VOLTS DC
NXsa-32848 - 4652 CBY"

Stamped onto the back of the cover in yellow are
"RELEASED 2-44 US Navy"
and
"ARC #9311
5.3-7 MC.
AIRCRAFT RADIO CORPORATION 10-44"

Measurements are 7" high * 5 1/4" wide * 12" deep.

Creative advertising at work, eh? But, do remember, in other parts of the world, outside of the United States, it is perfectly legal to operate even that green stuff on 27 MHZ frequencies! And, of course, that xtal can be ordered by the thousands from a multitude of crystal manufacturers around the globe -- so much for the "rare" aspect. Selling/having it is certainly not illegal per se, but ......

Message-ID: <MPG.12839e744206d4dd989684@news.earthlink.net>
Source record: 77128
Cross-posted to: sci.electronics.equipment,sci.electronics.misc,misc.industry.electronics.marketplace,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

I recently fell into a great deal (I think...). Picked up a
Systron Donner SA for $25. It powers up, and responds to input, but
something is awry and I don't know enough about SAs to figure out if it's
me or the scope.
Anyway, I desperately need an Operator / Service manual for it,
and they are not available from the usual manual sources. The components
are:

712-1 Display
809-1 RF unit .01 - 12 GHz

and I *think* the overall combination is referred to as a 762-2A, or
something close.

Does anyone have the manual(s) that they can let go? Or any
advice on the unit, even if you don't have the manuals. Any and all
assistance is always welcome.

Thanks!

Date: 1999-10-29 00:00:00 UTC
From: wz1u@aol.com
Message-ID: <19991029164459.27582.00000071@ng-cj1.aol.com>
Source record: 77137

I have for sale a Ten Tec Centurion amplifier in Ecellent Condition.......It comes with the original manual and original shipping carton.........I have a brand new matched pair of 3-500ZGMP tubes by RF-parts which was bought 10/25/99 still sealed in the box with the bill of sale......So this amplifier is ready to go 100%....
The specifications for this amp is as follows:

1.8-2.0, 3.2-4.7, 6.5-9.0, 9.0-15.6, 16.4-24.0, 24.0-29.7 mhz and 10 meters has been modified

Power output: 1300 watts ssb, 1000 watts cw, 50% duty cycle. RTTY and SSTV 650 watts, 50% duty cycle, ten minute transmission limit.

Driving power required: 100 watts for full rated output

Primary power: 220-250 VAC @ 15A. 110-125 VAC@30A, 50/60hz For full power operation. It is wired at present for 220 VAC.

I will take $1200 plus shipping and can be reached at (508) 821-2993 or e-mail....

WZ1U Steve / Lakeville, Ma.

This is a beautiful small in size RF Deck using Three 4CX250Bs.
It has two Vac caps, with counters on both and really nicely
constructed. Dates back to the late 60s-70s. This was a military amp
tunable on all the bands. Matches the Collins KWM-1 in size and color.
Could use paint and a power supply. $250

From: Bob <bmiller@calweb.com>
Message-ID: <381a66ec_1@news.calweb.com>
Source record: 77158

Hi mates,

I've had an R390A for some years now and when I bought the rascal the fellow said that the unit had All the Sherwood Mods. I've never had much time to putter with it due to many other beengunnas and only recently have I peeked under the lid. the only thing I noticed from a quick look is that the 3TF7 has been removed socket and all and there appears to be a solid state fix under the IF chassis. The radio works extremely well and appears to be a late edition EAC model from the 1966 mfg run. It looks like a new unit and original, not an overhauled unit. My question is basically where would I find a list of what the Sherwood mods were/are and that's about it. Winter is coming on and I've sold enough junk to make room for this rascal at the operating bench and may want to see what the mods are and what they do. Having a modest collection of 390As to putter with, I'm just curious as to whether these mods are worth doing to the remaining 390A anchors in the garage

Tnx for the read.

Bob, KE6F

Source record: 77044

I picked up a very nice looking Johnson Messenger transceiver, model 242-128, the CB version today for $5. The owner didn't want to take it home again. Initial tests produced no smoke and it seems to work perfectly except for one dead receive crystal. It looks very clean inside and the cabinet cleaned up exceptionall well. It has the original microphone and all original tubes except one.
Now I need some info from all you knowledgeable Johnson people.

1. Can this model be made to work on 29 mhz without having to modify the coils?

2. Does anyone have a manual or a copy available? I will pay whatever cost are incurred to copy and mail one.

Thanks,
Mike VE3FGU

> mechanically noisy?

Like any engineer, I'll just say, "It all depends." The intermittent rating implies it was used in transmitter service, where the full power output was required only when the microphone button was pressed or key was used, providing a built-in duty cycle of considerably less than 100%. Your 50% figure might be perfectly fine, but it all depends on the temperature rise design parameters of the specific dynamotor. If you want to protect the dynamotor properly, a thermocouple operated overtemp relay inserted into the winding area, set for whatever the allowable temperature rise was (sometimes specified on the tag) is all you really need. If you want to go the cheap route, check the case every ten minutes or so of continuous operation and when it becomes uncomfortably warm to the touch, that'll be the practical time limit. Unless the dyno has an integral fan, removal of the end bells will also help. Failure mode is most often the insulation, which breaks down with the heat, though there are a host of possible second order magnitude effects like expansion of a too-full bearing grease chamber onto the commutator, frying the brushes, etc.

Filtering is fairly straightforward, and the filter design is a function of the product of RPM and number of commutator segments - you'll have to determine that with a scope or physical count. The effective ripple frequency is significantly above 60~ so the values are small compared to a conventional power supply. You can then use the usual tables to determine the filter constants required.

As to acoustic noise, it depends on the type. Up until well into WWII, most dynamotors were completely enclosed and operated at relatively low RPM. There were two things wrong with that approach from an operational standpoint - physical size and weight. About the beginning of 1944 you began to see the emergence of dynamotors and rotary inverters which used integral fans, drawing air through the machine for cooling (and contributed to acoustical noise, but in a B-17, so what...), and a trend toward higher rotational speeds for better power to weight ratios. I have an 800 cycle inverter whose end bell looks suspiciously like a siren, and will wake the dead running the Navy GO-9 (no wonder it was a CW-only transmitter...) :-)

Hi,

I have an Apache TX-1, Seems to work ok, But output power is lower, Probably needs new tudes. Its hard to find a tester in my area. I got it from a friend that didn't have room for it any more.

I have so many projects going on. I was wondering If there is an interest for this transmitter anymore. I would be will to sell if I could figure out what company would ship it. I wieghts so much.

Email me if you are interested.

Ken W.

5501. FA: Almost New Variable Transformer - NR

Newsgroup: rec.radio.amateur.boatanchors

5511. Seco dual-channel with alarm signal treacer schematic?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-30 00:00:00 UTC
From: "George R. Gonzalez" <grg1@flash.net>
Message-ID: <8StS3.4129$49.280657@news.flash.net>
Source record: 77168

Ooops, I've done it again. Couldnt resist at the estate sale
and got two SECO Seco dual-channel with alarm signal tracers.

These are funny boxes designed to make the repairman's job easier.

Somehow you hook it up to an ailing intermittent radio and set
the alarms to go off if the signal goes away.

But they're sick, and there are 8 tubes and 8 adjustment pots on the back.

Anybody have a manual for these beasts?

Regards,

George

5512. AVC Overloading Hint

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-30 00:00:00 UTC
From: wb0poz@prodigy.net
Message-ID: <7vdrj6$24le$1@newssvr03-int.news.prodigy.com>
Source record: 77169

Finally got to a sad NC-183D that's been lurking in the garage for way too long. Powered it up, totally dead, except for some good 60hz hum when the vol control ws rotated (indicating the audio amp was working, anyway). B+ fine - the problem was a disc cap had been pushed over onto itself shorting out the grid of one of the IF tubes.

The next problem was more interesting. The radio overloaded horribly, and the "S" meter was full scale on most signals. Worse, Radio Havana was mixing with just about everything - and WWV on 10 MHz was a mixture of WWV, Deutsch Welle, and some Christian blather station.

Had no schematic so I checked out the AVC circuit. No apparent shorts or opens, and the RF gain adjusted the grid bias OK. But the AVC negative bias coming out of the detector just didn't seem to be enough to cut the gain down to prevent overloading which was interesting since both RF tubes and all IF tubes seemed to connected to the AVC bus.

I remembered that the SX-28s have an IF transformer that needs to be dipped for resonance (it's the AVC xformer); R-390As have a similar arrangement. Sure enough, the NC-183D's AVC was derived thru 1/2 of a 6AL5 connected to a transformer that had no bottom core. Adjusting this transformer slug for maximum NEGATIVE voltage on the AVC line (which roughly corresponds to minimum S-meter reading) cured the problem. Some dumb ham had PEAKED this transformer during a misguided IF alignment attempt.

I don't know if any vintage BCB radios used this arrangement (probably not, as it needs another IF xformer and an extra diode section). But you may want to check this out if you have a Radio Havana problem on your boatanchor.

Now I gotta strip the cabinet, patch all the extra holes (probably drilled by the same knucklehead that did the IF alignment), and repaint it. Guess the fun part's done.

73 John

I have a filament transformer for sale;
7.5vac @ 21A. with CT, it runs 240/120 pri.
Good for those 4-1000A & 3-1000Z tubes
It's a good working unit, I don't need it for my use.
$50 shipped conus.

I have (2) KILOVAC KM-13 dpdt vac relays, theseare good for T/R in those
"BIG" amps. They are rated @ 12kv, 10amp contacts, normal op voltage is
5.5kv.
I have full data sheets on these.
The coils are 12vdc (non-continuous op)good T/R op.
(1) is new, never installed.
The other is used, but excellent condition.
I want $100 each shipped conus, or TRADE for Jennings 26.5vdc type
I need one SPST @ 12-15kv(RF10B) type
I need 1 DPDT 3.6-8kv(RB3)type, or 2 spdt 3.6(RJ1A) type.

5531. FS WE 451A 250W Radio Transmitter

For Sale. For Sale. For Sale.
Please take a seat. This one is one big giant humongus Western Electric

451A Radio Transmitter. It is housed it its very own original Western
Electric metal cabinet with
see through glass door. The glass door is even sand blasted in its full

glory
"Western Eletric" to discourage any imitations. The full metal cabinet
stands at a little
over 6 feet tall and about 24 inches wide and deep. The gross weight is

estimated
to be about 1800 lbs!!! Yes. 1800 lbs!!! (Or 818 kg.) Not a typo
error.
The frequency is from 550 to 2275 KC. Power Output is 250 Watts.
The tube complements are 242C's on top and middle row made by Machlett.
The bottom row are 4 x WE 350B's. The most bottom row has 3 tube
sockets
and there is no mention of the proper tube number. They are 4 pins tube

sockets.
The lower half of the transmitter has more transformers which the
previous owners
have disconnected. The transformers are there waiting to be mounted.
Because this is one historic piece, I am trying to generate a BEST OFFER

for
the package. You'll get what you see in the pictures. I have no way to

test this rig.
I'd be terrifed to! It will be sold "AS IS". From the condition it is
in, I doubt
anything inside is burnt. This is all the info I have.
It has manuals and original WE blue prints.
For pictures click below.
Terms of Sale: Cash or Certiified Funds.
Transportation/Delivery: YOU PICK UP.
Thank you.
Chong Ong in Va

For sale:

HEATH DX-60 with accessories - includes matching Heath HG-10 VFO,
Heath HM-15 SWR meter
and a nice straight key plus the DX-60 manual. Fine two tone vintage
green radio! All in excellent shape. Will sell for $185.00

= = = = =

Kenwood TS-520s in good condition. Comes with a Shure desk microphone
The top cover has some surface rust and needs painting. Front panel
looks good.
All original knobs. Operates on 120V AC or 13.9V DC.
Will sell for $240.00

= = = = =

Kenwood AT-130 Antenna tuner. Excellent condition, in original box
with special cable included. Will sell for $125.00

= = = = =

MFJ 941-D All-band HF 300 Watt antenna tuner with SWR built-in.
Excellent condition.
Will sell for $70.00

= = = = =

MFJ 484-B Grand Master Memory Keyer. Has 4 memories for excellent CW.
This keyer includes the AC power supply for 120V AC operation, and is
in very good working condition.
Will sell for $70.00

= = = = =

Globe Scout 680 AM-CW transmitter. Complete transmitter with all tubes
etc. Needs a little work, mostly with the paint. No dents, but needs
painting. Front panel is good, but top cover has some surface rust.
Will sell for $95.00

= = = = =

Galaxy 12V DC Power supply. This will work with the Galaxy III and
Galaxy V series
of HF transceivers etc. No cables, Will sell for $39.00

= = = = =

National VFO-62. This is the companion VFO to their line of VHF transmitters and transceivers. 120V AC supply is built-in. This one is complete and in great shape. It needs paint on the outer case, but the front panel is decent. Main tuning knob has some surface rust.

I would like to trade this for an HF vfo (any brand) or sell for $45.00

= = = = =

I had gone over the radio capital with Ron. I just assumed it was in order and never ask him if it was. I guess this would be an EFU on my part.

The WBNS-TV captial has been ordered by John O and Tom G. There are some mistakes in equipment (in my opinion) But that is what they want to bring to the table. So be prepared for some discussion.

Message-ID: <381bb627.96420763@news.snet.net>
Source record: 77002

My SX-28A is in the final stages of restorations and have some
questions for
those of you that may be familiar with this radio.

1. On strong signals it becomes microphonic. Is this the nature of the
beast ?

2. On higher frequency there is some instability. Should I add a
voltage regulator to the HF ocs. or will that be futile.

3. Top bands do not seem to track well. There is an error of several
hundred KCs.

4. Finally I am looking for a replacement main tuning dial as the one
I have is in poor shape.

Thanks and 73

Got some of these caps to replace old paper, tubular capacitors in a transmitter circuit.
Q: Some of the orange-drops have a black line at one end (-- evidently signifying the "outer" cap-plate lead?). Others of them have no such marking. Doesn't it make a difference which lead connects to which other components, or ground, as the case may be...? Can I tell which lead is which without the marking?

thanks

I have some loctal sockets, of various types. All prices are plus shipping.

Amphenol "MIP" type - molded brown Bakelite with flat metal mounting plate. Mount in 1 inch round hole, mounting centers 1-5/16 inch. Unused (never soldered to). Price $1.50 each. (Have 8)

Amphenol "RS" type - molded black Bakelite with groove for snap ring mounting in special keyed 1-1/8 inch round hole, or with mounting plate. Unused (have never been mounted or soldered to). Price $1.25 each. (Have 1)

Cinch "RS" type - molded brown Bakelite with groove for snap ring mounting in special keyed 1-1/8 inch round hole, or with mounting plate. Used (have been mounted and soldered to). Price $0.75 each. (Have 3)

Eby molded type 160 - molded black Bakelite with mounting ears (all bakelite except the contacts). Mounts in 1-1/16 inch round hole, mounting centers 1-5/16 inch. Unused (have never been mounted or soldered to). Price $1.25 each. (Have 1)

Various mfr. molded types - molded black Bakelite with crimped metal mounting plate. Mount in 1-1/8 inch round hole, mounting centers 1-5/16 inch. Used fair condition. Price $0.25 each. (Have 3)

Hope you can use some of these!

This sort of stuff still happens all the time.

I look at it this way - better it's rescued than trashed.

Best deal I ever got personally was a BC-342-N (made by Farnsworth!) for two bucks. Took it home and it worked right off. Still have it, still works.

More than 25 years ago my college EE lab was cleaning out the "back room". I got a near mint BC-348 for the price of carrying it home. Unfortunately, I did not recognize the NC-101 and HT-6 that were there, too. They probably wound up in the dumpster.

~5 years ago a local ham friend trashpicked a near mint unmodified BC-459 from a pile on the sidewalk. (No other radio gear there, oddly enough). He asked me what it was worth (he knew what it was, being an OT) and was dumbfounded when I said "$20-25". I shoulda kept quiet - he woulda given it to me!

Message-ID: <381C9372.F8B464FB@localnet.com>
Source record: 77013

--Looking for the following IERC tube shields
These are anodized black or deep purple and have an open top with a
series of tabs folded over a thin, octagonal
metal tube inserted longways inside the sheild. They are also labeled
plainly "IERC". They have a unique model number stamped on the outside
of the sheild denoting which size it is designed to fit. The following
is the list that I am looking for:

quant ierc number

7 6020-B
2 5015-B
13 5020-B
1 5025-B

That would be for all but the ballast tube and 26Z5W
which I don't have.

Watsa someone pleeze,

Jim n2go

1/2", 1", dia. etc. 4-6" long
Ceramic standoffs too, with threaded ends, any lengths.

5562. Re: CW from a GRC 106A; Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-31 00:00:00 UTC
From: Bob <bmiller@calweb.com>
Message-ID: <381c9a25_1@news.calweb.com>
Source record: 77015

Hi Nico,

Going from memory, my GRC-106A experience says that the output of the unit is supposed to be a CW signal, derived from a injected tone into the SSB system. I'll check my pile of prints later next week. When using the GRC106A on the air while in the military I remember it having a fairly high transmitter noise level around the Carrier frequency both on CW and on RTTY where data tones are injected into the SSB generator as well. Even more noise in diversity mode when multiple FSK tones were injected. Otherwise, a fun radio to putter with if you can deal with the USB only limitation.

Bob, KE6F

microphonics usually result from a tube with loose elements..
try tapping each one gently with a pencil that has an eraser..
the instablity could be a number of reasons..
from memory this rcvr has no xtals the frequency stability is determined
by LC ccts..
is it unstable after being on for several hours?
try heat or cooling around suspect components..
tapping lightly on supect parts might isolate also..
alignment may have to done several times..
each time working both ends of dial and splitting the difference..
good luck in finding a dial, junkers are around..

From: Brian Harrison <bharrison@apple.com>
Message-ID: <7viik7llq1@fir.prod.itd.earthlink.net>
Source record: 77029

Hello, and thanks for reading...

From an estate I have a Hallicrafters TO Keyer model HA-4. a
small, grey rectangular transistorized keyer with built-in speaker. I've
seen lots
of the HA-1 TO Keyers (tube models) over the years, but this is the first
HA-4 I've ever come across.
Draws 1.5 W @115VAC per the label on the bottom of the case. It needs some
cleaning up,
and the top case will probably need repainting (grey), but it looks to be
all there. Makes
noise when I turn it on, but will need some troubleshooting - nice and open
inside, nice and clean inside and looks easy to work on.

$20 pickup, or plus $5 boxing/shipping

tnx and regards,

brian

5583. Greenlee punches for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-10-31 00:00:00 UTC
From: hmn <w2ufo@banet.net>
Message-ID: <381CE944.94218F4@banet.net>
Source record: 77036

I have the following Greenlee punches in their original individual
packages. I will only sell these as a set. I WILL NOT break them up.

1 pc 2 3/4"
2 pcs 1 1/2"
2 pcs 1"
1 pc 1 1/4"
1 pc 2 1/4"
2 pcs 5/8" round
1 pc 5/8 " square
1 pc 7/8"
1 pc 1 1/8"
1 pc 3/4"

price for all above $250.00 + shipping. Please note the carton holding

all above is not very large but pretty heavy, so I suggest anyone
purchasing these should request UPS shipment (You pay the freight).
Payment accepted as bank check or postal money order only.

Message-ID: <C_6T3.355$Gd6.14843@news1.mts.net>
Source record: 77042

Hello Folks:

Now that I have your attention with the curious header...I am in need of a lead to the manufacturer of a pot that is made up of various sections stacked up with a switch on the rear. I am restoring a piece of broadcast equipment (Howe model 7000) and many of the rotary pots are worn out in the switch that takes audio into the cue system.

On the back is the info:

A-B
Mod Pot
Mexico

Can anyone tell me who made this, and if there is a website or address I could write to?

Regards,
Lee Smith

I have a Hallicrafters S40 that needs:

*alignment
*a new capacitor or two
*bfo repair
*and a digital readout would be nice too

I'm in Sacramento, and the only guy I know of who does repairs on old radios charges an arm and a leg and always has a 3 month backlog. I'm looking for somebody within a reasonable distance (say 100 miles) to repair my Halli. I'd do it myself but my coordination is so bad that I can't work with the small parts used in radios. I'm willing to pay for all parts and labor up to a reasonable amount (a couple hundred?). Let me know. I would appreciate email to (moo) (@) (midtown) (.) (net) (remove spamblockers to reply) or I will keep checking back here.

Hi guys.

DMOZ, the Open DIrectory Project, is creating a searchable database of Amateur Radio BOATANCHORS web sites, and other amateur radio categories.

So far, we have assembled well over 300 sites.

These will eventually be searchable through all of the major search engines which will use the Open Directory. This is a volunteer project, and we are making sure that all of the sites listed are CURRENT and WORKING!

If you know of more that could be added, you may submit them.

Whether you are able to do that or not, you are welcome to use the current directory (under construction at this time.) We are adding more sites daily.

Take a peek today:
http://dmoz.org/Recreation/Amateur_Radio/Boatanchors/

Let us know what you think!

5629. Help needed on DX-100 Restoration - Cold Solder Joints

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-01 00:00:00 UTC
From: William Brown <trainers@sympatico.ca>
Message-ID: <381E1B5F.B0DDEDE3@sympatico.ca>
Source record: 76896

I picked up a Heathkit DX-100 on the weekend (man what a hernia maker!), and apart from the fact that it was at one point subjected to water and is corroded a bit on the chassis, the 20-20-20 electrolytic capacitor is gone, it looks as though most if not all the solder joints are cold. (smooth surface on the solder, no lumps, but not the typical shine of a good connection.

In the process of restoring things, should I give these joints a re-heat, or should I leave well enough alone? This darling is a mystery, a combination deplated chassis, a little black on the line side inductors, a little rust, etc. I don't know if it caught fire and was doused with water, had a water pipe burst above or if it just gave up the ghost. Can't tell what happened to it exactly or why it wound up in the state it is in. But I guess forensics is part of the fun!

William

For what it's worth, I bought one of these a few years ago from Fair Radio Sales and can attest that they are very nice units. They are competitive with the much-pricier Millen dippers, and even more rugged. I am not selling any, nor am I associated with anyone who is... just offering an unsolicited opinion. Several have come up for sale recently, and I'd definitely recommend them to anyone looking for a good GDO.

I have a RBH -2 made by National Radio Company for sale. This radio is a simi restored radio . Still missing some parts I should say it is missing the Crystal Phasing unit the box inside the radio . This radio has all the tubes and it also has an extra RF stage built onto the back this is a factory deal not an add on by someone else. $75.00 + shipping from 92869. I have a picture if interested .
Thanks Matt Parkinson . If you don't know what this is it looks just like a NC-100 with a wider back end.

5649. Re: SX-28 Questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-01 00:00:00 UTC
From: bg998@FreeNet.Carleton.CA
Message-ID: <7vimri$4bu@freenet-news.carleton.ca>
Source record: 76955

Hi, Carl!

Can't answer all of your questions, but

1. No. In my experience with two different SX-28s, with good tubes installed microphonics are not a natural feature of this rcvr.

2. My father had modified both sets to add a VR-150 (or maybe 105) for the HF oscillator stability. He mounted the tube socket on a small bracket under the chassis and it worked fine.

3. As I recall from aligning my set (haven't turned it on for some years), the tracking on the highest freq band was tricky and some compromise at each end of the band was necessary. But it has been a long time and I have forgotten any details about "getting it right".

Good luck. The 28 is a fine rcvr when cared for properly. Using my Dad's SX-28 when I was just a teenager gave me an unrealistically high expectation of receivers in general until I became much older. I was truly spoiled by that set.

100's of winter projects at Harry's Homebrew Homepage http://sm0vpo.8m.com.

I have done a lot of updating recently and included a 4-watt AF amplifier as well as coil-winding using PCBs so that anyone can wind the same coil! Not an easy task, remember Harry's laws?:

1 - No two people can wind the same inductor with the same instructions and materials.
2 - Coil winding data is a constant that varies from person to person.

Of course, the article is illustrated with photographs of a 20uH inductor (+150pf = 4MHz).

There are loads of antenna projects, transmitters, receivers and even a little booze, if you think "homebrew" has another meaning.

I have my own message board which is in daily use by home constructors with problems or suggestions. If you could help to answer some of the questions there I would be eternally gratefull.

best regards from Harry - SM0VPO

The WS19 puts out 20-25W on CW. There is a large WS19 collectors' group on the East Coast - Northeast US and Canada. We have a weekly WS19 net.

You can read about the activities of the WS19 group on VE3BDB's web page dedicated to the WS19 at: http://www.qsl.net/ve3bdb .

And here are some of my "cheaper" finds: A National NC-1000 transceiver (500W) a local ham wanted to dump becouse of "no output after he lost his antenna in a storm". He blew the final, it works great, now...
I saved a Globe Champion 350 from a dumpster (works fine...).
I found a nice late model RBC receiver in an antique market - $35.
I found an SX-25 on the curb after a neighbor moved...

Things are still around - keep your eyes open.

Source record: 76964
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

to all,

Notice: AWA Election, meeting and Board meeting is Nov 7, 1999.

The meeting will start at 1:00 p.m. at the Thruway Marriott Inn in Henrrettia, NY. (The same place we have our annual meet.) This information was ommitted from the last OTB.

Several board members are not running again and their seats are open to be filled. If you are interested in being a Board Member you should try to attend the meeting or contact someone who is going to be there. There are 20 board members and at least two are not running again.

Unfortunatly, the ony way you can vote is to attend the meeting. This meeting lasts about 15 minutes. It is followed by the board meeting.

One of the good things about attending the board meeting is - you will hear the financial report. This report does not get placed in the OTB, or printed and distributed to regular AWA members. When asked about this at the AWA membership meeting last September, I was told President Bill Fizette answered, "What good would it do."

All-in-all the AWA has around 4,000 members but only about 20 to 25 attend the meeting and vote.

If it happens on just one band, you may have a cracked or loose trimmer cap
in the RF section.

Or it may not be microphonics. You may have a AVC circuit problem.
Does the S-Meter respond properly? If not the AVC circuit
may be not tuned up right.

>other components, or ground, as the case may be...? Can I tell which
>lead is which without the marking?

Convention is to run the "outside foil" to the ground side (I'm guessing that this is for the purpose of providing better shielding against noise). But in the majority of cases, I don't think that you'd notice any sort of difference if it were something like a blindfold test.

AES carries SBE "orange drop" capacitors that do not have an outside foil designation. I've used these to recap old receivers and have had good luck with them, not particularly paying attention to which way they were installed in the circuit. I *think* that if you are looking at one from the printing side of the case, the lead to the right is the outside foil (if I remember correctly, every Sprague unit I've ever seen has had that one marked with the black stripe).

I sure wish *I* had found it ;-).

It's a WW-II Army Airways transmitter, used in HF
air traffic control.
It is patterned after the Navy TDO.
It covers 2-18 MC, 250 watts AM/CW/RTTY,
VFO or crystal control in early models, VFO only in late models.
Runs on 220VAC single phase.

Better then a BC-610 in my book!

Try Antique Electronics in Tempe Arizona.
For an on line catalog, go to

http://www.tubesandmore.com

They sell everything for xtal sets, as well as complete kits.

5674. Re: how to generate 50-khz signal for alignment

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-01 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <1XjT3.250$RI1.5219@sea-read.news.verio.net>
Source record: 76980
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Well, I picked up an HP 200CD audio generator that solves the original problem (how to generate 50khz signal for aligning 1st IF). I would appreciate advice from anyone who has aligned an SX-88 before.

I am not getting the expected reading from the meter, with everything connected as per the manual.

The manual says to disconnect the lead from terminal 4 of transformer T3 (not easy to reach!) and connect it that lead to the signal lead of the generator. It also says to connect the multimeter probe to the "far" side of the detector (V9, 6AL5)) load resistor, which I also did. On the schematic, the detector load resistor is R88, 47K.

The ground leads were connected to chassis ground, of course. I am using a digital multimeter, set to read DC volts.

According to the manual, I should then adjust T6 - T13 for the maximum reading on the multimeter, maintaining about a positive 1 volt reading.

Instead of positive 1 volt, I got large *negative* voltage readings from the meter at the test point. Also, cautiously adjusting the transformers did not seem to affect the meter reading (or sound from the speaker) at all. After trying about three of them, I set them all back to the original setting as best I could, and called it a night.

Am I making some dumb mistake . . . ?

5675. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7vki2loqd1@news.hawaii.edu>
Source record: 76981
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

*rec.radio.broadcasting (devoted to the broadcast industry; moderated)*
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

*It's been sadly reported that the moderator was lost to us in an
automobile accident; the future of this newsgroup is not known. 73 Bill...

5678. FS WE 451A 250 Watt Radio Transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-01 00:00:00 UTC
From: Chong Ong <ongkt88@erols.com>
Message-ID: <381DD8AD.E29CD521@erols.com>
Source record: 76984
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.audio.tubes,rec.audio.marketplace

For Sale. For Sale. For Sale.
Please take a seat. This one is one big giant humongus Western Electric

451A Radio Transmitter. It is housed it its very own original Western Electric metal cabinet with
see through glass door. The glass door is even sand blasted in its full

glory "Western Electric" to discourage any imitations. The full metal cabinet
stands at a little over 6 feet tall and about 24 inches wide and deep. The gross weight is
estimated to be about 1800 lbs!!! Yes. 1800 lbs!!! (Or 818 kg.) Not a typo
error. The frequency is from 550 to 2275 KC. Power Output is 250 Watts.
The tube complements are 242C's on top and middle row made by Machlett. The bottom row are 4 x WE 350B's. The most bottom row has 3 tube sockets and there is no mention of the proper tube number. They are 4 pins tube
sockets. The lower half of the transmitter has more transformers which the
previous owners have disconnected. The transformers are there waiting to be mounted.
Because this is one historic piece, I am trying to generate a BEST OFFER

for the package. You'll get what you see in the pictures. I have no way to
test this rig. I'd be terrifed to! It will be sold "AS IS". From the condition it is
in, I doubt anything inside is burnt. This is all the info I have.
It has manuals and original WE blue prints.
For pictures click below.
Terms of Sale: Cash or Certiified Funds.
Transportation/Delivery: YOU PICK UP.
Thank you.

5679. Re: Hammarlund parts, paint

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-01 00:00:00 UTC
From: n4buq@aol.com
Message-ID: <19991101133512.02869.00000910@ng-ft1.aol.com>
Source record: 76985

Look for N0ALO's web page. He runs Radio Restoration and bought R&R's stock of paint. Lynn is a really nice guy to deal with!

73,
Barry - N4BUQ

There was a company called "R & R Designs" in either Madison or Marshall Wisconsin that used to carry parts, paint, etc. for old Hammarlund radios. The phone number that I had for them no long works and directory assistance cannot find a listing for them. Sounds like they are out of business. Does anyone know for sure? Is there another company around that sells used parts, matching paint, etc. for the Hammarlund's.?

Please copy reply by direct E-mail to: w4sm@cstone. net

Thanks,
Stacey/W4SM

Message-ID: <7vkvdd$h1u$1@news.smartworld.net>
Source record: 76990

I recently inherited an SB200 and it seems to be working well after I did a bit of work to it. Question is, what's normal output for this guy? I am using an MFJ 989C tuner to feed a CF Zepp and generally can get anything from about 400 watts (10 meters) up to about 700 watts (75 meters) on the meter of the tuner. Is that normal or should I expect more/less?

Also, any hints, tips or modifications that you would care to share with me would be greatly appreciated.

Allen-Bradley.

Mod Pot is a series of theirs where you can assemble a custom pot out of standard, stock sections. Find an A-B distributor and sweet talk them into sampling you the sections you need. Maybe if you offer to take one of their outside guys to lunch he will bring you a sample kit and you can go wild.

I would suggest you try these sites:
http://www.hallicrafters.org/
http://dmoz.org/Recreation/Amateur_Radio/Boatanchors/
http://www.qth.com/stamper/search/bafoof.htm

Plus you may wish to join the Hallicrafters discussion list and
ask there. Go to http://www.qth.net/ and sign up for free.

BTW: I *may* be interested if you decide to part with it, I'd
like a reliable phone patch and having one that has the Hallicrafters
name on it would look nice in my shack. Perhaps we could work a
swap of some sort. I have no idea what it is worth, if it is a collectors
item I am not interested as I don't have those kinds of spare funds.

"Pulled" Collins 70K-2 PTO. Purchased about a year ago
from a reputable Collins Collector who said that it was
tested and worked fine. I was repairing a Collins
receiver, but turned out I didn't need to replace the
PTO, so now it's for sale.

I'll ship it in CONUS for $125. If interested, please
send email to me at: sereikas@yahoo.com

Thanks and 73!

5689. Re: how to generate 50-khz signal for alignment

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-02 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <IyFT3.361$RI1.6995@sea-read.news.verio.net>
Source record: 76845
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Maybe the generator is overpowering the receiver.

In normal operation, I measure small negative voltages at the test point (far side of the detector load resistor R88). The test point measures barely negative at no signal. It swings up to from -1 to about -3 volts DC on strong stations.

When I hook up the HP 200CD, set for lowest output, the test point shoots past -50 volts DC!

I don't have an external decade attenuator. Perhaps I could try making a little voltage divider between the generator's signal lead and ground . . .

Source record: 76848

Hi All,
I am restoring a Hallicrafters SX11 and according to the manual it has 2 6L6's. Will I get better audio if I substitute 6L6G's? Did they use 6L6's because they were metal and self-shielding? Or weren't glass 6L6's around back then? Would there be any drawbacks to using the 6L6g's? I have both kinds od tubes so it doesn't present a problem, but I wanted to get the best audio possible. Any advice/information would be greatly appreciated. Please respond directly to: nc183d@aol.com

Date: 1999-11-02 00:00:00 UTC
From: richard d'avy <rdavy@delrio.com>
Message-ID: <exHT3.859$sR5.7755@newsfeed.slurp.net>
Source record: 76849
Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.packet,alt.ham-radio.vhf-uhf,rec.ham-radio,rec.ham-radio.packet,rec.ham-radio.swap,rec.radio.amateur.boatanchors

I have for sale a GE ExecII radio 100 watts out. The radio has been tuned down into the ham band and is presently tuned to 147 MHz and has been modified for 9600 baud packet. It can also be used for 1200 baud packet by changing a few connections, or could also be used as a 2 meter repeater. Radio comes with a partial repro manual, tells how to use for 9600 baud, 1200 baud or how to use as a repeater, and one set of elements. This unit is in excellent condition, I'm getting out of packet, not enough activity in my area - so can't stand to just let it set here. First $150.00 plus $10.00 for shipping gets it. Please respond via email.

Richard

>and apart from the fact that it was at one point subjected to water and
>is corroded a bit on the chassis, the 20-20-20 electrolytic capacitor is
>gone, it looks as though most if not all the solder joints are cold.
>(smooth surface on the solder, no lumps, but not the typical shine of a
>good connection.

>In the process of restoring things, should I give these joints a
>re-heat, or should I leave well enough alone? This darling is a
>mystery, a combination deplated chassis, a little black on the line side
>inductors, a little rust, etc. I don't know if it caught fire and was
>doused with water, had a water pipe burst above or if it just gave up
>the ghost. Can't tell what happened to it exactly or why it wound up
>in the state it is in. But I guess forensics is part of the fun!

If it were me, I'd redo them all, just to eliminate it as a potential
source for trouble.

One thing that I've found to be extremely helpful in situations like
this is liquid rosin flux, sold in bottles by GC Electronics (I think
that Antique Electronic Supply carries it). The cap has a fine brush
mounted on the underside, and you can dab a small drop to the solder
joint to assist in the solder reflow/resetting when you heat it up
with the iron. Works like a champ for me. It also helps desoldering
braid to more efficiently pick up liquid solder if you are doing that
to the connection.

C.K.

5698. Re: Johnson Valiant tubes

According to MIL-HDBK-213A, "the 5763 is a beam power VHF amp, transmitting version of the 6AQ5." The 5763 is not rare, at all. A fair number of rigs used it as the driver tube, as does the Valiant. The HBK also lists a sub as a A4541H. (NATO?) Hope this sheds some light.

dslosty wrote:

> The Valiant uses a type 5763 tube.

Thank you for the input. The overwhelming consensus, including a friend who eyeballed the situation is to re-solder. I have the braid and the rosin and the hot iron - God help us all!

William

Various year and partial years of magazine above. Some in binders.
I am located north of New Orleans area. Will sell only whole years
or partial years, no single copies.
Will consider trades for older equipment (boatanchors) or ARRL/Jones
"Handbooks". What I have is excess to my needs.

Hey Harry,

You ever hear anything more from that lunatic who was threatening to report you to the "internet authorities" {sic} for refusing to design and furnish him with a schematic and construction plans for the multi-KW RF generator for drying firewood? You sure attract some odd ones, he he. Keep up the good work, I love your site, and soon will build the complete Cigar Box RX/TX pair (have the RX done).

John,
This output seems to be within the "normal range."
Mods I would consider are from Harbach....replacement caps, "soft start",
and "soft key" (if you are using a modern rig to key it.)
Tom
N2LDE
John - KI4RO wrote in message <7vkvdd$h1u$1@news.smartworld.net>...
I recently inherited an SB200 and it seems to be working well after I
did a bit of work to it. Question is, what's normal output for this guy? I
am using an MFJ 989C tuner to feed a CF Zepp and generally can get anything
from about 400 watts (10 meters) up to about 700 watts (75 meters) on the
meter of the tuner. Is that normal or should I expect more/less?

Also, any hints, tips or modifications that you would care to share with
me would be greatly appreciated.

Not sure which Lysco but the Transmaster 500/600 was reviewed in the Aug or Sept 1950 CQ, they liked the rig. We had a copy in our tech library but its now gone(???) so just a heads-up on an article with schemo. I guess Lysco built mobile equipment too but I have a model 150 ant tuner for use with the 500/600 and an inverted 'L' and its OK..much like the Heath AC-1.

DON'T attempt a solid state replacement - unless you ALSO install a
dropping resistor to comphensate for the increased voltage, otherwise
you may damage parts, and make erroneous test readings...

Been there, done that...

FA on e-bay:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=189143047

WWII-era US Navy transmitter
ca. 1944
Made by Aircraft Radio Corporation

This great-looking 5.3-7MC transmitter is quite unique. It has one 1626, one 1629, and two 1625 tubes which all appear to be in good condition. The crystal socket is empty. There is a locking hinged hatch over the 1626 and 1629. It's missing a locking lift-off hatch over the pair of 1625's, the screws for the cover, and the base plate - but otherwise it's intact. Underneath the RF deck are three nice big air-variable capacitors. All instruction plates are clean and legible. Front-panel controls all have knobs beside them that, when twisted, lock the companion control. Controls are Frequency, Antenna Inductance, and Antenna Coupling.

The top front plate reads:
"T-21/ARC-5
28VOLTS DC

From: dslosty@pipeline.com
Message-ID: <381ea30e.2268339@news.pipeline.com>
Source record: 76922

The Valiant uses a type 5763 tube.
It's a miniature 9 pin pentode, with a seemingly unusual pin layout.
Is there an equivalent tube? Anyone have the specs on this tube?
It seems similar to a 6BQ5/6CL6/6AQ5 or other typical pentode.
None of my literature has the specs for it.

Also someone has installed a type 5746 in place of the factory spec
12AU7. Is the 5746 an industrial equivalent?

Tnx es 73,
Doug/WA1TUT

Hello,

I’ve been offered a batch of radio equipment also containing an Ecolex encryption installation made by Philips. It consists of 4 not to big modules and is complete with cabling as I’ve been told (I have not yet seen it). It was originally used in an SSB radio truck.
I would like to know if I can sell or trade this Item before I buy the whole batch because this kind of equipment is not of interest to me. I’m interested in Larkspur/Clansman equipment.

>In the process of restoring things, should I give these joints a
>re-heat, or should I leave well enough alone?

Depends. Are they cold joints, or just oxidized on the surface from poor storage? In either case, the best thing to do is re-solder.

The procedure that works for me is to heat the joint with a little new solder, then when hot, use a solder-sucker to pull most of it, then re-solder. Joints that look bad from environmental conditions won't pick up heat from the iron very well without a little help from new solder.

I know this will be time-consuming, but in the long run will be less frustrating than "finishing" the restore, only to have to unbutton the unit and fix something next week.

Cross-posted to: sci.electronics.equipment,rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

For sale:

Hewlett Packard HP-180 scope with HP-1801 dual amplifier module
and HP-1822 time base module. Has blue screen filter in a pouch
with it. Powers up, lights, and has trace. Beyond that I haven't
a clue as to condition. It looks fine and came from a working
AV repair bench auction lot I purchased from a school district.
Missing the carry handle and has ID markings on it on the sides.
Overall it appears to be in good condition. All the knobs and
switches work and are there, and it's not dinged up.

Can email jpegs to serious inquiries.

This unit is a bit out of my realm, so I haven't a clue as to
pricing. Please make an offer. Will be shipped double boxed
via US Mail. Not all that heavy, so should ship fine.

Indeed it is. It was common for a 6146 (or pair) to be used in commercial VHF gear in the 150-175MHz range! Soory no schematics BUT, if someone has a manual on an old Hammarlund, Motorola, or Sonar VHF amp (they all made them with 6146s), that would be your ticket!

5751. Q: Know a welder for my 75A-4???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-03 00:00:00 UTC
From: cccacutts@mindspring.com
Message-ID: <7vphd3$82e$1@nntp5.atl.mindspring.net>
Source record: 76795

All,

Does any one know or can recommend a welder that can close up holes in my 75A-4 front panel? There are a total of 25 additional holes that need to be welded closed so that I can get the front panel repainted and silk screened. Keep in mind that the front panel is made of aluminum.

The 25 holes were added to the 75A-4 for additional circuitry by the previous owner.

If you would like to see the radio in "as found" condition, try the following address:

http://www.mindspring.com/~cacutts/item/75a4a.jpg

and

http://www.mindspring.com/~cacutts/item/75a4b.jpg

As bad as this radio looks, there just might be hope for it. The one good bit of news about it is that it still receives! "Takes a licking and keeps on ticking!"

Thanks for all your help and I hope to add some photos soon after I get this receiver restored.

I have manuals that show a 6146 used in the Motorola mobile and
base station radio we used on 162.00 MHz. Would you like the
PA section scanned and sent to you ?

If the lettering is not engraved, as your mention of silkscreen suggests, I would look to having a new panel punched. Assuming it has no folds, it would be a fairly simple job and you would end up with a blemish free surface, front and back. Welding can introduce warping, and getting the surface back to the original smoothness can be a problem.

Looks interesting!

I'd recommend an alternative to welding - think auto body repair putty. Obviously, the set will need to be repainted post-repair, so I wouldn't be afraid of needing to do some sanding. Strip that thing, find an auto body repair guy, and see what you can do.

Good Luck!

Omigawd! This is the worst thing I've ever seen happen to a piece of
commercial gear...well, maybe close second - first was some misguided
dude that mounted a wall toggle lightswitch complete with ivory switch-
plate on his converted 450 MHz radio to turn his subaudible on and off.

5779. Re: how to generate 50-khz signal for alignment

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-03 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <tI1U3.459$RI1.8913@sea-read.news.verio.net>
Source record: 76823
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Phew. I think I got it. To attenuate the generator's output, I connected a potentiometer between the generator's ground and signal lead, then took the signal from the pot's wiper. That allowed me to keep the measured voltage at the receiver's test point around -1 volt, and I could still see measurable differences when tweaking the IFs.

No job is complete without a last-minute panic, however. After finishing the alignment, I hooked up the receiver for normal operation and was horrified to see that the S-meter had died. No amount of adjusting, rechecking connections, etc., would resurrect it.

After a while, I discovered that the 1st RF amp tube was dead. Go figure. Replacing that tube immediately brought the S-meter back to life, and the SX-88 now plays like a champ. (Don't ask me why the RF tube chose that moment to die. I don't think I fried it by injecting too strong a signal -- it lies upstream of the injection point in the signal path.)

Was it worth all that hassle? Opinions might differ. I think it's performing better now. It certainly beats the pants off my restored SX-42 in SW bands. But it played pretty well before. For the record, all of the IFs seemed to need *some* adjustment. The overall improvement was not a huge one, but at least I can say that the receiver is working as well as I can manage.

Thx for all the good advice, and special thanks to Bruce Stock for helping me figure out how to use my "new" HP 200CD properly. Maybe I should learn to do some audio work, to get my money's worth out of this nice audio generator :-)

Phil

5786. T/R switches and antenna relays

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-03 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <7vqfl1kjo1@ash.prod.itd.earthlink.net>
Source record: 76830

There seems to be some confusion these days about what a T/R switch is and what it is not. In many cases, items being discussed as T/R Switches are actually just antenna relays, usually of the coaxial type, such as Dow-Key. A T/R switch (of the boatanchor period) is a vacuum tube device that connects in the antenna line coming out of the transmitter or amplifier. It provides an antenna connector for the receiver and couples the receiver to the antenna in such a way that the receiver is not damaged by the output of the transmitter. The T/R switch was commonly a broadband device, but at least one common model had a bandswitch. E. F. Johnson and B&W made T/R switches, and there may have been others.

Obviously, if the receiver is connected to the transmitter output at all times, any noise generated by the transmitter finals will be coupled to the receiver. For example, a transmitter such as the Hallicrafters HT-37 has an idling plate current when the transmitter is not being keyed on CW. That will be heard in the receiver as "hash" or white noise that can mask the signals. Also, the tuning of the final stage in the transmitter can affect the sensitivity of the receiver. Use of an antenna relay avoids these problems.

If your transmitter final is biased to cut-off when the CW key is up or the VOX/PTT relay is not keyed, then you can achieve true break-in operation using a T/R switch, provided that your boatanchor receiver doesn't block with the transmitted signal.

I believe it was in this newsgroup that someone posted, about a month ago, requesting data on the 1698 monoscope tube. I have come across a rather complete data sheet on this tube and a schematic for a "simple" tube-based circuit for using it. I'll be happy to supply a photocopy.

From: Bismarck Wichy <wichy@dallas.net>
Message-ID: <s21kq2i224249@corp.supernews.com>
Source record: 76834

Quite correct. In fact, vendors state you have to mount the T/R switch a close as you can to the transmitter as possible to work correctly.

Dow-Key did make an electronic T/R switch as well. You will find it at:

ftp://bama.sbc.edu/downloads/dowkey/

I have one. Works OK (correctly)... If you - WANT - QSK... IMHO - Frankly, it's a bit overrated.
PTT or rather STCW (Switch to CW) works much better in high QRN es QRM levels.

Hi Will,

No, he has been remarkably quite. No doubt he tried to use his "wasta" to do something but failled. I should have copied him the Heathkit linear and HF TX and charged him for it!

Interesting that I have had yet another request from a different source, the guy wanted electronic info to build an induction fornace. He said it would be of benefit to us "hams" since we could then make custom aloys. In all my years in hamradio I have always tried to avoid melting metals in my shack - success rate approaching 99%! You can read this yourself if you look at the message board.

From: Jim <w7ls@blarg.net>
Message-ID: <381FED63.16CBACBC@blarg.net>
Source record: 76888

Hi. Still cleaning out the shack and have a nonworking Heathkit HW-99 and matching speaker. It was built very well, with no solder blobs or other visible problems. Doesn't transmit and doesn't receive. It does have a sidetone. Condition of the case is very nice, but has some scratches. 4 screws on the side are not the black ones, but are shiny replacements. It doesn't look new, but it isn't very far from it.
The HW-99 was sold as a novice radio. It covers 80, 40, 15, and 10 meters only. Power output is rated at 50 watts and is adjustable down to pretty close to zilch (is that a proper term??). It is CW-only. Color is the modern brown, like the HW-9.
There is a sticker inside that indicates that it was serviced by Heathkit in 1986, it looks like. I could be wrong, and it may only indicate that it was built in 1986. Not sure about that. I have most of the manual for it, but lack the schematic. There is tuneup info in the manual info that I have.
I'll sell them separately, but only if the speaker goes first. I don't have time to deal with this now, so I'll offer the speaker for $35 and the transceiver for $150, or the pair for $175. Thanks. Jim W7LS.

Hello:
I have a nice Drake TR-7, RV-7 & PS-75 station for sale/swap.
The TR-7, has the digital freq readout and general coverage rec option. Case - cabinet is as new from Drake. Last fired up on 40 meters about a month ago, and worked just fine. The rig is probably a 9 plus, as to condition.
The RV-7 is a VFO, works fine wiht theTR-7. Has one or two pin marks on the face, otherwise nice.
The PS works fine and powers up the rig. Good condition. Not banged up.
For the package, will not split it up, $500 PLUS shipping. I am in CT. and can meet someone, within a 100 miles or so if need be.
Will consider trades, Military or high end communications receivers, such as Racal, WJ, Mackay, etc.
Can contact me via Email at ke2wg@aol.com
or call during business hours at 800 961 1121 ext 3205
I am Nick Blades. references available, as I have sold-swapped my gear on rec. radio, etc.
THANKS

5818. HCRA Annual Auction - 11/5 - Feeding Hills, MA

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-04 00:00:00 UTC
From: Jim Mullen <jmullen@rockys.com>
Message-ID: <38217ac5_9@news.newsfeeds.com>
Source record: 76743

The Pioneer Valley's best amateur radio auction is just around the corner. Last year's auction had over 100 attendees. Lots of good stuff was bought and sold. If you would like to participate in this year's event, here's the particulars:

DATE: November 5th, 1999

TIME: 7:30 PM

PLACE: Feeding Hills Congregational Church
North Westfield Street
Feeding Hills, MA 01030
(next to Dunkin' Donuts)

RULES: Amateur radio, computer or electronic equipment only.
Mark each item with your name and call (if licensed)
10% of selling price goes to the HCRA
If it doesn't sell, you take it home!
Club donations are always welcome!

CONTACT: Jim, WA1ZUH (jmullen@rockys.com)
Irv, W6IS (w6is1@juno.com)

*** *** BONUS RAFFLE !!! *** ***

An ICOM IC-T8A, tri-band HT will be raffled off. Tickets are only $5 and no more than 200 tickets will be sold. $5 will get you a great chance to win a nice HT. Second prize is an ARRL Antenna Book CD. Tickets will be available during the auction, and the raffle will be drawn immediately after the auction. You need not be present to win.

Anyway, thanks for reading this and hope to CU at the auction.

'73...
Jim Mullen - WA1ZUH
144 Tower Hill Road

Heard on Radio Havana Cuba (RHC) on 11/13/1999 between 0345 and 0400 UTC @ 6000 kHz :

Their DX Unlimited Listeners show described in great detail the modification of a 1947 SP400 for Mediuam and SWL ...

1) Audio stage updated to solid state
2) IF stage updated to solid state
3) front end still tubes
4) Rectifier replaced with diode
5) Power transformed smoked ... then re-wound

Spoke of continuing pleasure using the set daily. Freely admitted that a collector would frown on the restoration, but his objective was to having access to a great performing set.

Reminded me of how Cubans keep their '57 Chevys running after all these years.

- Bob

I HAVE 1L6 SUBSTITUTES, ITS A 1LA6 WITH A SOCKET ADAPTOR. SAME TUBE AS THE 1L6, WORKS JUST AS WELL, WORKS FAR BETTER THAN THE 1R5 USUALLY USED AS A REPLACEMENT. ADDS ONLY 3/4" TO LEADS, $16 FOR TUBE AND ADAPTOR, HALF WHAT THE 1L6 COSTS.

I HAVE 6E5, 6U5,6G5 SUBSTITUTES. ITS A 12 VOLT 6E5 WITH AN ADAPTOR TO SUPPLY 12 VOLTS FROM THE 6.3 SOURCE. PLUG TUBE BASE DIAMETER ADAPTOR INTO THE CABLE, PLUG THE TUBE INTO THE 1 3/4" LONG ADAPTOR. NEW TUBE AND THE ADAPTOR FOR $16 POSTAGE PAID.

I HAVE SOLID STATE SUBSTITUTES FOR THE 83 MERCURY VAPOR RECTIFIERS USED IN TUBE TESTERS. SAME CALIBRATION. PLUGS IN THE SOCKET. $8.00 POSTAGE PAID

disregard caps, visual problem

Heheheh now there's a blast from the past LOL. I remember using those test sets and scope 35 years ago, at my first job with AT&T as a TD2 microwave radio tech. I do remember putting an antenna on the 37B and using it as a half-a$$$$ radio receiver :)

Ah mmemories :)

For Sale,

RME 6900 receiver and 6901 matching speaker.

It covers 80, 40, 20, 15 and 10 meters plus WWV from 10 to 11 Mhz.

Both are in excellent condition except the receiver has two very small holes under each side of the BFO pitch control where a vernier was previously mounted.

Otherwise, everthing else excellent.

A manual photocopy is included.

$300 US plus shipping.

Please reply to csc@smartt.com if interested.

From: martyt@pobox.com
Message-ID: <38220e52.203626108@nntp.grapevine.net>
Source record: 76764

I have the following items for sale:

Drake TR-3 - Needs some minor work. Receives well but the s-meter doesn't deflect. Has problems on 40m with some kind of self-oscillation while tuning up. I've checked it over and a couple of the tubes are not exactly what it calls for so maybe that's the problem. Face plate is nearly perfect; case could stand to be stripped and re-painted but it's not too bad as is. Chassis is the usual tarnished copper but otherwise fairly clean. $125 shipped UPS Ground.

Drake MS-3 - Case is a little scratched but grill is very nice. Does not have the "MS-3" logo on the front panel (never did have it as far as I can tell). $50 shipped UPS Ground

Drake AC-3 works fine. Currently installed in the MS-3 so won't have the bottom panel or feet or anything. Original caps as far as I can tell. $50 shipped UPS Ground

Take all three for $210 shipped or take the MS-3/AC-3 combo for $90 shipped.

Reply via e-mail if interested. I'm Looking to move this stuff ASAP to pay for some other stuff the XYL doesn't know about... Help me out here!

5845. FS or Trade: SBE 1A HF amp beutiful

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-04 00:00:00 UTC
From: Lane Zeitler Ku7i <Ku7i@worldnet.att.net>
Message-ID: <7vt9oa$28n$1@bgtnsc03.worldnet.att.net>
Source record: 76770
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Super nice SBE 1A HF amp. Covers 80,40,20,17, and 15 meters (17 is covered on the 15 m band position). Front panel is excellent. Overall cabinet is very very clean. Works great. Uses six 6JE6 tubes. Output is 500 watts into a Bird 43.

Sell for $175 plus shipping (weighs 40 pounds) or trade for:

nice receiver
SB-200 or similar amp minus tubes
?????

Source record: 76771

Any welding shop with TIG or MIG can weld aluminum, but making the surface flat enough afterwards to pass inspection will be a real challenge. The hardness will be wildly variable, and machining it perceptibly flat will be difficult. Are there any nuts or studs pressed into the back, or are all the originals through holes? If only holes are involved, I agree with the suggestion of a new piece of aluminum, as it will be homogeneous and will take paint smoothly.

Glenn,

It was used in the BC-610 transmitter (also the HT-4 I think.)
1939-1948 or so. It was used in a lot of home-brew transmitters too.

> 1) Audio stage updated to solid state

Why? The audio is one of the best aspects of that receiver.

> 2) IF stage updated to solid state

Again, why? Stages have plenty of gain, relatively low noise. The
only "weak" spot, by modern standards, is the mixer, which could be
better.

> 3) front end still tubes
> 4) Rectifier replaced with diode
> 5) Power transformed smoked ... then re-wound

Gotta do what ya gotta do.

I would be interested to see if there was any real improvement in
performance.

According to the BC-610 tech manual, the final tube is a 250-TH, not TL.
In this series of tubes the H and L refer to Mu, with the -TH indicating a
high Mu tube where the -TL is low Mu.

Source record: 76717

Hi,
I bought a Henry 4K ultra amp and found that the time delay and flasher
is listed in the manual as 120 sec. delay time. but the actual parts are
90 sec. delay. Is it O.K. to use 90 sec. parts in this amp ? This amp
uses 8877 single tube at 4KV plate voltage. Would appreciate any help.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-05 00:00:00 UTC
From: William Brown <trainers@sympatico.ca>
Message-ID: <38226285.B3D6BF0F@sympatico.ca>
Source record: 76790

I have the following tubes for sale. These are loose used tubes. All
come with a 30 day warranty. I am helping a family settle their father's

estate, and as such this is
the first list of several to come.

These prices are in Canadian Dollars, and as our American cousins know,
your dollar stretches 1.5 time further north of the 49th. Prices do not

include postage. Email me with your order, or if there is a tube you
are
looking for that's not here, let me know and I'll check to see if I
have it.

Hi There,

I have a few 833 triodes, 350 watts, pulls.
Big glass tube, 2 top caps, 2 pins for the heater.
About 5 inches diameter and about 6 inches high.
Don't know what emission they have and have no way
of testing them. The filament is continuous
and there are no shorts.

I'll trade for SCR-274N or ARC-5 Command parts,
especially control boxes, racks, connectors,
TN-6 antenna tuner, O-4 crystal oscillator,
T-15, T-16 transmitter, FT-260, FT-310, C-24, MX-19 adapters,
or make a suggestion.
I have a list of wants at:
http://www.shlrc.mq.edu.au/~robinson/museum/wants_trades.html

Regards
Ray vk2ilv

If you have one that does not work you should know that eimac will rebuild tubes god as new. The tube should be worth at least $600 new to make the rebuild worthwhile.

I often wonder why this tube was not more popular if only because it is different and a good number of us are hardware junkies anyway

Dear Group: There is another way to etch crystals that I have used for 40 some years: buy some ammonium bi-floride (dry powder) ; when mixed in water, it disassociates into a weak HF acid if above about 70 F; place crystal into solution (I used an old ice tray); remove periodically, shake in water, dry with alcohol, test frequency, stop when near. Store unused portion in fridge.
Regards, Mac N8TT

Message-ID: <3824E8D2.6715@nbnet.nb.ca>
Source record: 76600

Howdy Al....though any reputable welding shop doing aluminum mig or tig could likely do that job for you, the shear number of holes might present a problem with warpage, and in any even would result in a LOT of grinding/sanding etc to feather this out. My suggestion, would be to strip that panel and fill the holes with a good quality epoxy, letting it puddle a little on one side and back up the other side on a smooth surface. NOW the cleanup will be to merely sand flat (the last step of the weldup job anyway) and repaint (which is what you were going to do). The side benefit will be no warpage. No matter what you do, it won't be "as original" so you're better off with the epoxy.

73 - Keep on Tinkering.....THAT.....is REAL HAM RADIO

5905. Heathkit HW-101's For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-06 00:00:00 UTC
From: W4DAS <dcb@ecqual.net>
Message-ID: <3824b46d@nntp-out.newsnerds.com>
Source record: 76601

Hello,
I have two HW-101's for sale:

1. First is in very good condition. Some paint chipped on top of case and around screws. No modifications that I can see. It has the optional CW filter. Includes original manual in excellent condition. I just replaced the three tuning belts inside. I have not tested it for operation yet. Asking $100 plus shipping.

2. Second is nicer than first but has two modifications. It has a BNC connector for the antenna. It also has a small toggle switch below the meter that has an unknown function. It was done very well. This one also has CW filter and original manual. Asking $100 plus shipping.

3. PS-23 power supply (identical to the HP-23C) in excellent condition with original manual and cable to attach to HW-101. $65 plus shipping

5906. Hewlett Packard 400 DR Voltmeter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-06 00:00:00 UTC
From: William Brown <trainers@sympatico.ca>
Message-ID: <3824B83D.474061CD@sympatico.ca>
Source record: 76602

Any body ever hear of them? If so where can I get information or an operation manual. Just acquired one today, and all I know is that it measures RMS voltage up to 300V, but don't know what kind of frequencies, etc. I know I know, I sound like I'm as bright as a box of dirt, but at my age the voltage rise in the learning curve is not instantaneous! :-)

All help is received with gratitude.

William

5917. Swan 350C, I need (1) page from manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-06 00:00:00 UTC
From: Bill Bird <billbird@mo.net>
Message-ID: <Ph7V3.1035$N4.6737752@typhoon.stlnet.com>
Source record: 76613

Hi,

I noticed that on page 13 of my Swan 350C manual (I just got rig and manual!) that there are no tube or coil callouts on the Figure 4 Top View or Figure 5 Bottom view. In fact there are no callouts of any parts on these diagrams. I looked at a friends Swan 350 manual and that manual had callouts and arrows on these two diagrams - but of course the 350 and 350C are two different models.

Hopefully my Swan 350C manual was an early edition that was corrected or at least somehow some hams got the diagrams with callouts for the 350C.

If you have the diagrams and can copy the page and mail it to me, or fax it, or email a scanned image to me I will very much appreciate it. Thanks and 73.

5933. Re: Q: Know a welder for my 75A-4???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-06 00:00:00 UTC
From: Robert Leamy <rleamy@alltel.net>
Message-ID: <3823C84A.20A26FAD@alltel.net>
Source record: 76728

I would suggest going the auto body filler route. I used this method on a old hallicrafters s-40 which had, of all things, a toggle switch to turn the panel lights off and on. I used a can of auto body putty I got from a Target store and did the job myself. I put a small disc of screening in the hole to provide more surface for the putty. After sanding smooth, feathering the edges, and repainting the whole panel, it was impossible to see the repair. I don't know how it would work with a wrinkle finish. Good luck with the restoration.

5941. FS: Collins 180U-2 Antenna Tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-06 00:00:00 UTC
From: mc@REMOVE.sover.net
Message-ID: <3824568e.16601277@news2.sover.net>
Source record: 76736

This is a nice compact antenna tuner from the KWT-6 transmitter. It is very light and extremely well built. Uses a combination of fixed and variable capacitances along with a nice roller inductor. Front panel has the same multi-turn knob as the KWM-1. Is rated conservatively at 100 Watts Carrier (AM/CW key down) which translates to about 175 Watts SSB.

The cabinet has been repainted (black), feet have been added and a ground post has been mounted in a spare hole on the rear panel. These mods are 100% reversable if desired.

Price is $65.00 plus UPS. If interested please reply by e-mail.

73,

Michael Crestohl

Hey Gang:

In response to numerous requests we will re-broadcast RealRadio Shows 1 and 2 over the next two weekends. Show #1 will be tonight at 7:30PM EST.

Enjoy!

MrMike & The Timtron......
Starting this Saturday evening at 7:30 Eastern Daylight Time (2330Z) a new weekly radio show will debut on WBCQ The Planet which broadcasts on 7415 Kilocycles. It will focus on tube-type radio communication equipment discussions, interviews, guests, tapes from the past, ham radio music & folklore, great tunes from the 70s and 80s, the odd commercial and just plain fun. In other words, we're gonna play radio!!!!

The new program is called REAL RADIO. Mr Mike, W1RC and The Timtron, WA1HLR are the show hosts.

This week's program will feature some very important news that is sure to be of great interest to everyone interested in military and government radio equipment. Also featured will be a special surprise guest. Mark your calendar and don't miss it!

We actively encourage input from you the shortwave listener. A special e-mail address has been set up to receive correspondence - RealRadio@usa.net! A .mp3 version of each program will eventually be posted to a suitable Internet Newsgroup or Web site for downloading.

See ya!

73,

MrMike, W1RC
The Timtron, WA1HLR

5943. 15 meter coil for HRO

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-06 00:00:00 UTC
From: Joel Levine <joelbmh@worldnet.att.net>
Message-ID: <801narfaj1@bgtnsc01.worldnet.att.net>
Source record: 76738

A friend of mine who does not have access to this newsgroup asked me if there is information available to convert a pre-war HRO coil to 15 meters. National did not manufacture this coil because 15 meters became a ham band only after the war.

Thanks

Joel WB2BMH

Source record: 76742
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Full ouput of the Yaesu FL2100 80 to 10 meters. Pair of Cetron 572Bs (American). Abt 650 watts out. 120 or 240 vac input. Have manual.

SBE 1A uses six 6JE6 tubes. Output is abt 500 watts. Covers 80 to 15 meters. No manual. Very near collector quality. Easily a 9 out of 10. No mods.

Trade both amps for an amp using the 3-500Z tube(s). SB-220, LK-500, AL-80A, SB-1000, etc. Will consider an amp with no tubes depending on what it is and what you are after in trade.

RICK: The 83 is 5 volt 3.0 amp heated rectifier with fairly heavy ratings for a receiver rectifier tube.It has a 4 pin UX-4 base?
I always felt the 83 was a forerunner of the 5U4 (octal base tube). Maybe you could use get and use a 5U4. Have to change the tube base though
Another alternative is to solder two solid state diode rectifiers into an old UX-4 tube base and plug that in. However the full voltage will come on the HT rail immediately you switch on. That may be OK or you could add a bit of resitance into the circuit. Again you may be able to do that on the substitute rectifier tube base itself and not interfere with the units wiring at all.
You mention this is for a tube 'tester'. In that case it may not have any filter capacitors to worry about when putting the full (peak) rectified voltage onto the HT rail.
Just a few thoughts. Also try searching on <duncanamps> for info on the 83.
Regards. Terry S. Torbay, Newfoundland Canada.

Hi
I am curious as to why you would want to change the audio on a 5100-B?
I don't think there are many radios out there that can match B&W audio
quality. Just my opinion. And yes I have several. I'm even thinking
of selling one and a 51SB.

5975. Heathkit Equipment for Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-07 00:00:00 UTC
From: Art <kr4jo@coastalnet.com>
Message-ID: <38258BF0.2F7D@coastalnet.com>
Source record: 76646

Hi everyone,

I have a bunch of Heathkit equipment that I have been asked to
dispose of for a Ham that is no longer able to use it. This is
a long list and I do not have any prices on it due to time to
type it in. Any interested parties may email me with offers.

HW-101 transmitter with P/S, HD-15 phone patch.
SB-10 SSB Adapter
TX-1 Apache transmitter
AM-2 RF power bridge
IM-2410 Freq counter
IM-13 VTVM
IM-103 Voltage Monitor
TC-2 Tube Checker
ET-3100 Trainer This appears to be new in box and is some type
of training aid.
HA-202A Amplifier This appears to be a mobile, poss 2-meter.

The following have no model numbers that I have found so far but
all are Heathkit equipment.

RF signal generator
Signal tracer
extra new probe for above signal tracer

I have not checked this equipment for operation yet, but will before
shipping if needed. I think that I have the manuals for all.
This was a ham shack in the old way. Stuff everywhere and I have
not found everything.

You can email me at either of two addresses: cn1639@coastalnet.com
or cn1039@coastalnet.com

I can provide pics if wanted.

5983. Buying and Selling Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-07 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3825AD01.1AA60237@ix.netcom.com>
Source record: 76654

Several people over the last few months have asked me
about judging the value of tubes they were thinking of
buying or selling. I've been buying and selling them for
the last few years, so I've put together the pointers
I use and copied them to the list
in hopes it will be helpful.
Others may have differing opinions. Dave S.

You have to be very careful buying and selling tubes.
A few are worth a great deal but even more are nearly worthless.
Now, when I say "worthless-" you can always find a hobbyist or
two who will take them off your hands. I mean "worthless" as in
you can't get enough money to justify the time, effort and shelf
space expended on them.

In both buying and selling, you need a realistic
guide to resale value.
Here are some basic value guidelines
that will cover 95% of the tubes you'll find-

Tubes not worth your money or time:
"Series filament" 7- and 9-pin miniature tubes used in televisions-
typical numbers are things like 5AQ5, 4GH8, 3AK5- are utterly
worthless, even if NOS. Don't waste your time or shelf space
(exception- TV power sweep tubes are usually worth saving
regardless of their filament voltage.
24LQ6, for example, is valuable).
TV damper diodes like 6AD4 or high voltage rectifiers
like 1B3 and 1K3, even NOS, have no value. Toss them.
Compactrons other then those used in Heathkit and other
such ham gear are also worthless.

Tubes generally worth saving (though not always very valuable):
Any six or twelve volt filament tube other then those defined above.
Any two-digit tube or three-digit tube (24A, 301A).
Any tubes produced before 1939.
Any triode or dual triode (2A3, 6SN7, 6DJ8, 12AX7 etc.).
Any audio power tube (6L6, 6V6, 45 etc.).
Any transmitting tube.
Any voltage rectifier other then those defined above.
Any "odd" or "collectable" tubes (acorns, pencil, microwave).
X-ray or Cooledge tubes.
Nuvistors.

Figuring dollar value of your tubes-
Value can vary with buyer, seller and, apparently, the wind.
Many are worth less then a dollar- some are worth hundreds.
There are a few sign posts to guide you along.
The most important factor in fixing dollar value for your tubes
is how quickly you want to move them.
Second is their condition.

If you don't mind letting them sit on your shelf
(which costs you time-value against your investment and will
eventually erode away that value), then price them
close to the price in the AES catalog (I hope you
really like tubes because you're going to have them
for a long, long time).
If you want to get your money out of them more quickly,
price them between 40% and 60% of AES new tube prices.

This is assuming, of course, that we're talking about
tubes that are 'new in box" (NIB). If your tubes are white boxed
or "loose-" even if you swear on your mother's name that
they're new- they're USED. Sorry.
Used tubes that are uncommon and test "good"
will usually have a maximum value of 25% to 30% of NIB.
Used common audio tubes like dual triodes 12AX7 and 6SN7
bring about $2 each, so you get even less here.
Certain brand names or physical traits can add value to
a "used" tube, such as being an Amperex "Bugle Boy" or
an RCA "Black Plate" tube. Research current prices for
new tubes of these types. Value these used tubes at
about 20%-25% of NIB prices.
Rare tubes are exceptions to the NIB rule, of course,
but will still bring far less then NIB.

There is a way to get a reasonable value for your tubes
within in a reasonable time.
The E*b*a*y haters are going to get all squirmy,
but if they want to be stuck with tubes for which they can't
get a decent price, it's nothing to me.
If you want to sell tubes and get a decent return,
follow these steps:

Catalog the tubes you have and their condition.
Take a decent photograph of the lot.
Get the AES catalog and set a value on the lower
side of the guidelines above- the lower value you set,
the more likely you are to sell them.
List the tubes on Ebay. Be absolutely and brutally honest
in your description if you ever want to sell anything else-
the market is unforgiving of those that intentionally mislead.
You must post a photograph of the lot if you want the best price.

Set the reserve price for your lot at the value
you have calculated and open the bidding at $1.

The reserve protects your investment against the unforeseen
and market fluctuations. The $1 opening overcomes the human
reluctance to be the first person to make a large bid.
Post on the three news groups who's charters permit
sale posts: rec.radio.swap, rec.radio.amateur.boatanchors,
rec.audio.tubes. Be absolutely certain to put

FA: (whatever tubes)

in the subject line of your post. This has become the
standard courtesy to those who wish to filter out auction posts.
You can expect one or two horses-asses to make smart remarks
about your perfectly legitimate post. This comes with the
territory. If they get nasty, report them to their ISP.
I've gotten three users who were old enough to know better
suspended for this and they don't mess with me anymore.

I hope this helps-
Best of luck on your ventures!

Re: Time value of storage space and tubes to toss in the dumpster.

Based on current history of junk to jewels and great shades of 300 dollar Ocean Hoppers, I would suggest that anyone with ANY kind of tube, no matter what technology or era it came from, keep said tube in storage somewhere. Yes, even those odd compactrons and 3 volt TV tubes will be valuable to some collector or nostalgia buff in years to come. To suggest otherwise would be folly on the part of the tosser and ahistorical.
Now I am not suggesting that the 3CB6 or 6BF11 will become cash cows like the 6550 or 2A3 or 7591, but in the next decade when folks are restoring old Tube TVs and other American entertainment jetsom and flotsom, the quest for a 6DW4 damper tube may be is harried as the impossibe mission to find a Genelex KT88.
If I only had the current market value for every VT4C I tossed back in the 50s I'd be living on my own tropical island with a mint julep in one hand and gawd only knows in the other.
So enough of the rant for now. Dave's economic are not that off base, just too narrow.

For sale:

Tempo VFO-ONE Remote VFO for the TEMPO ONE. Silver face with manual.
Rare piece. Very hard to find. Just needs cable (7-pin) to connect
to transceiver. Will work with either the black-face or silver face
Tempo One, for split operation, memorizing two frequencies etc.
Includes switch to determine which one will control both transmit,
receive or split. Manual included. Will sell for $45.00
= = = = =

Globe Scout 680 AM-CW transmitter. Covers 80, 40, 20, 15, 10 and 6m.
6146 final with 6L6 modulator. Complete transmitter with
all tubes etc. The case just needs paint. Front panel is good.
Will sell for $95.00
= = = = =

Radio Shack DX-160 receiver with matching speaker, and external DC
cable.
Very good working condition. 120V AC or 12V DC operation. Includes
partial manual.
Will sell for $95.00
= = = = =

Kenwood TS-520s with SP-520 matching speaker in good condition.
Comes with a Shure desk microphone. Front panel very good.
Has all the original knobs. Operates on 120V AC or 12V DC.
Will sell for $285.00
= = = = =

Drake TV-1000LP 1000 Watt Low Pass filter, in excellent condition
$25.00
= = = = =

Drake TV-5200LP 1000 Watt Low Pass filter for up to 6 meters, in
mint condition. Will sell for $35.00
= = = = =

NYE VIKING 1000 Watt Low Pass Filter with original documentation, spec
sheet. In mint condition. Will sell for $25.00
= = = = =

National VFO-62. This is the companion VFO to their line of
VHF transmitters and transceivers. 120V AC supply is built-in.
This one is complete and in great shape. It needs paint on the
outer case, but the front panel is decent. Main tuning knob
has some surface rust.

I would like to trade this for an HF vfo (any brand)
or sell for $45.00
= = = = =

MFJ 941-D All-band HF 300 Watt antenna tuner with SWR built-in.
Excellent condition.
Will sell for $70.00

I recently purchased a Knight R-100 receiver in mint condition ($20). It came with the original manual but other than telling how to install the 100kc crystal calibrator it does not tell how to use it and says refer to the crystal calibrator manual which I do not have. Anyone know how to use it? Whats it for?

Thanks

Tony

There should be a variable capacitor (or slug coil, I don't remember which) on the crystal calibrator assembly which (if required) can be adjusted to "zero beat" WWV at 5/10/15MHz.

Then, whenever the crystal calibrator is engaged, you can adjust the nearest 100KHz mark on the radio dial to "zero beat" that mark. In this manner, the dial will be as accurate as you can have it when receiving.

I built one of these in 1960 and used it for a few years. A piece of nostalgia. At $20 invested and in good shape I am sure you can make 5-6 time your money selling the receiver to someone wanting a piece of their past. Personally, I'm not that much into nostalgia but, many people are!

I totally forgot about battery tubes!
The ones you list aren't series-filament TV tubes,
but battery radio tubes. They are all worth saving, of course!
And I also stated that compactrons used in our radios were
worth the effort to save as well.

> How can you tell somebody to throw away good tubes? IMHO, that is
> completely contrary to the spirit of our hobby....
Because I was writing about practical marketing of tubes-
not tube hobby ethics. That's a matter of personal convictions.
"Good tubes" within the context of what I wrote
are defined as tubes which you could sell for a return
that would cover your expenses in keeping and marketing them.
I did write at the outset that there might be hobbyist who want
things like 3AK5 and 4BQ8, and that they might take them for free.
That is, in effect, "tossing" them.
I must tell you that I have on many occasions attempted to
GIVE AWAY hordes of these type tubes. I had exactly ONE
person offer to take them if I paid the shipping!!
Needless to say, they went to the dump. I don't have space
or time to mess with these type tubes. I'll dedicate my
space to those tubes people actually need.

6008. Re: How do I use Crystal Calibrator built into radio?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-07 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19991107171910.02488.00001743@ng-ca1.aol.com>
Source record: 76679

The frequency markings on the radio's dial will be only "approximate." To help you adjust the dial, or mentally compensate, the Crystal Calibrator produces an accurate frequency that your receiver will receive loudly. That's the "crystal" part. In your rig, the output of the calibrator will be found at every 100 KHz.

Now you have to figure out which control on your receiver turns the Calibrator On and OFF. Typically there will be a control labeled "Cal," "Calib," or some other abbreviation. Turning that On, and tuning very slowly around, say 3.85 MHz(M.C. on tou receiver), you should hear a loud carrier being produced by the Calibrator. Compare the point where you tune the Calibrator signal in such a way as to produce a tone going down in frequency (a lower pitch) until it is gone. Now you are "zero beat" with the calibrator, and your receiver should show a frequency near the 3.85 mark.

Hi everyone,

I have four tubes that I am looking to sell.

They are Eimac 4-400A glass power tetrode tubes

1- New in box, I opened box myself to check tube.
1- New wrapped in original wrapping
1- Poss New not sure
1- Used

I am selling these for a ham that cannot operate his station anymore.
The family needs the money to support him.

I have found new listings for this tube at approx. 140-150 dollars New

I will take the best offer over 275.00 or will consider other offers.

Tnx for reading,

You can reach me at cn1639@coastalnet.com or cn1039@coastalnet.com

6021. Swan 350C, need (1) page from manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-07 00:00:00 UTC
From: Bill Bird <billbird@mo.net>
Message-ID: <O5sV3.1116$N4.7359104@typhoon.stlnet.com>
Source record: 76692

Hi,

(I am reposting this as I made a mistake last time)

I noticed that on page 13 of my Swan 350C manual (I just got rig and manual!) that there are no tube or coil callouts on the Figure 4 Top View or Figure 5 Bottom view. In fact there are no callouts of any parts on these diagrams. I looked at a friends Swan 350 manual and that manual had callouts and arrows on these two diagrams - but of course the 350 and 350C are two different models.

Hopefully my Swan 350C manual was an early edition that was corrected or at least somehow some hams got the diagrams with callouts for the 350C.

If you have the diagrams and can copy the page and mail it to me, or fax it, or email a scanned image to me I will very much appreciate it. Thanks and 73.

Lane,
You can try several trucking companies like Yellow truck but their rate is very expensive, ususally asking about $1 per LB. There are some consolidated trucking companies that charge $.50 per LB. Let me check tomorrow and I will let you know.

Hello all,

I have a BUNCH of test gear for sale, ranging from tube-type signal
generators to B&K semiconductor testers. LOTS of equipment.
All of it came from a local high school AV repair shop, and all is
in good shape and I believe it to be working. Most has ID markings
of some sort (engraving, paint stencils, etc.) but otherwise is in
great shape. Most pieces have the original manuals.

Too much to list here, so go to this link:

http://www.greatsurplus.com

Then click on 'Electronic test equipment'. There is quite a bit of stuff
there right now, and I will be adding more over time.

Thank you, and take care.

Dave

6031. Attn: Hammarlund Collectors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-08 00:00:00 UTC
From: tech <tech@dp.net>
Message-ID: <Pine.BSI.4.05L.9911081611510.15164-100000@home.dp.net>
Source record: 76502

Hello Hammarlund Collectors,

I have a few parts here for some Hammarlund equipment. Not sure which models they are for or anything else. I got them in a bunch of other miscellaneous equipment and parts I bought from an estate.

If you think you might be interested in what I have, make me an offer. Otherwise, let me know if you would, what these may be worth. I'm not looking to get rich off of them, but would like a fair price for them. I'm a bit too young to be familiar with the brand or their value or the parts therefore. I've only heard about them and some comments about their use and quality.

A couple of them came in what look to be original parts boxes. Unsure if these are the parts to match the numbers found on the boxes.

Part numbers that are on the boxes are:

1 - Transmitter Coil Form Code TCF-5 with a packet of hardware of some sort. (No wire on it)

1 - Coil Form Code SWF-4 (with wire wound on it and hand stamped for 80 meters).

1 - Coil Form similar to the SWF-4 no wire on it.

2 - spools of wire unknown exact length. With thread covering(?) looks to be copper. Enough to wrap a coil or two probably.

5 - coils as described below. But ALL are copper(?) and about the guage of about #8 or bigger. I'll list them as Coil Number 1-5 (CN#). ALL of them have a flattened mounting flange on each end.

CN# 1 3 T 2.5" dia.
CN# 2 4 T 1.75" dia.
CN# 3 7 T 1.75" dia.
CN# 4 12 T 2.5" dia. USES about #6 size conductor - slightly bigger and longer than CN# 5.

CN# 5 12 T 2.5" dia. USES about #8 size conductor

Not sure if CN# 1-5 are Hammarlund or not, but they came with the Hammarlund parts.

ALSO have 8 smaller procelain/glass(?) insulators with mounting holes and screw posts with nuts. Maybe for trasmitters or linears.

Even if these coils or insulators are not a part of the Hammarlund collection of parts, I'm sure they were made for a reason to transmit or

receive with.

I'll take reasonable offers for these too.

ALL parts are NOT including shipping or 6 % Sales Tax (if a PA resident).
ALL parts sold first come first served. U.S. Postal Money Order only.
Orders shipped with in 24 hours of receipt of money order. Most shipped
same day!

E-Mail me if interested. If you DO plan to buy them, let me know ASAP by
e-mailing me your shipping address and that you are in fact sending
the payment and I'll go ahead and get them packed up awaiting payment.
Mail comes in at 10:30 AM and goes out at 3:30. UPS goes out at 3-3:30
pm. So, I can get them out the same day in most cases.

Thanks,

6034. Re: How do I use Crystal Calibrator built into radio?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-08 00:00:00 UTC
From: Gord Skiffington <skiffing@nbnet.nb.ca>
Message-ID: <3825C220.4855@nbnet.nb.ca>
Source record: 76545

a little info missing in the couple of explanations you got Tony.
The crystal calibrator is used to CORRECT your dial such as to be reasonably accurate over more or less of your dial (the amount of the dial that stays accurate will have a bearing on how well the last alignment went or whether anything has changed in the tuning elements of your receiver). So, how do ya use it.....You turn your dial to the closest 100 khz calibration point nearest the frequency you'd like to be accurate on.....say 3800 khz and you'd like to be accurate near 3810....now switch on the calibrator and listen for its beat tone to be heard.....zero beat this tone by tuning the dial until you are at the center of the point where no tone is heard (tuning either side will produce the tone). At this point, look at the face of your dial....there ought to be a means of physically moving the dial cursor so that this zero beat point now makes 3800 (or whatever point you chose) to "line up" with the dial.....turn the calibrator off and tune around as normal.

You'll get the feel for it real quick.....and for example will be able to see whether aligning the dial say on 3800 khz will keep its alignment to 3900 khz. When you find yourself in the predicament whereby you'd like to be accurate on say 3850 and the dial just won't stay in agreement over even a 100 khz range, you can "split the difference" with your movement of the graticule.....say up a little at 3800 which might result in being down the same physical amount at 3900.....that'll put ya pretty close at 3850 when tuned center! All kinds of tricks lost on the synthesized and digital-is-more-accurate crowd nowadays!

You can or will see after getting the hang of it, that you can even use your crystal calibrator to assist in re-alignment of the tuning element part of an alignment.....should you feel inclined to try that at some point.

A last note.....regards the mention made of a tuning slug or trimmer capacitor on or in the crystal calibrator circuit itself....this is used of course on a rare basis to align the calibrator itself against an outside standard....or a station on a known accurate frequency which falls on an even 100 khz point.....typically used is WWV (and its variations) on typically 2.5, 5.0, 10.0, 15.0, 20.0 Mhz (there's others).
Pick a frequency that has the best signal if possible....tune your receiver IN THE AM MODE and switch on that crystal calibrator.....if any beat note is heard between the 2 signals, adjust your calibrator CAREFULLY to cause the beat note to be zero. Reason for using AM MODE here is so that you're only comparing your calibrator against the desired standard and not your BFO as well heheh.

Good Radio too. Have one in the 'lab' which is always 'On' (Standby
mode of course.) Builet it in '67 and have used it as My only HF rig
since. (SWL not HAM) Has every accessory the thing was offered with in
'66. (Christmas present from Me.)

Less out there worth listening to now, but still fun.

Good Signals... LCM

You're thinking of the military option 323 models. They go for about
half that price, and they're built into a death-defyingly yellow armored
box with potential overheating problems. The military models weigh a
great deal more than the commercial model and lack one or two of its
features (e.g., the phase-lock stabilizer).

That is a decent price for a commercial 8640B, if it's in good shape.

Looking for the following stuff:

Drake:
- 8 KHz AM filter for R-4C
- Accessory crystal cover for R-4C
- Accessory crystals for 4-line, what do you have?
- 2AC crystal calibrator

Heath:
- DX-40 power transformer (or suitable substitute)
- 400 Hz CW filter for SB- and HW- rigs
- Frequency dial for VF-1 vfo

Thanks and 73,
Dean / K5DH http://www.qsl.net/k5dh

Hi, all. I'm looking for manuals for the following items:

Heathkit FM deviation meter, model IM-4180

Heathkit solid state dip meter, model HD-1250

Lafayette antenna impedance analyzer, 99-33094

I also need the "green" 13-25MHz plugin coil for the dip meter.

Thanks!

6053. Re: Need Info on HTX-202 lithium backup battery

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-08 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <806rcg$9in$1@holly.prod.itd.earthlink.net>
Source record: 76564
Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.packet,alt.ham-radio.vhf-uhf,alt.radio.scanner,rec.ham-radio,rec.ham-radio.packet,rec.ham-radio.swap,rec.radio.amateur.boatanchors

I just installed a 'generic' battery. Something like $3 at RS. I clipped
off the old battery leads, and soldered right to the new one. I just picked one that had about the right voltage and encased it in a piece of heat shrink.

I forget which one I used. I bought my HTX-202 used, and the battery died about a month after I got it. This was about 4 or 5 years ago I think. Anyway, That new battery has been in ever since. Not a single glitch until just last week. And that was when I plugged in this aftermarket 8-cell AA pack that came with another HTX-202 I had picked up. Turned out the alkalines in the pack were quite low, and when I tried to run the radio, it 'glitched' and gave me the dreaded ER1 message. I had to hard reset to get out of it. So maybe my internal is getting low... Maybe time for the SECOND swap.

By the way, does ANYONE know where to get more screws that hold the case together? I suppose I can get more from Maxon, if not RS. RS list a 'screw kit', but I don't know if that's what I need or not.

Subject: Frederick Oliver Hammond - VE3HC "SK"

It is with deep regret that Radio Amateurs of Canada announces the loss
of a great friend to amateur radio. Fred Hammond (1913 - 1999) died Nov
7 at 10 AM following a debilitating stroke last year. Visitation will be
at Wall-Custance Funeral Home, 206 Norfolk St., Guelph, ON Tue 7-9, Wed
2-4 and 7-9. Funeral Thursday Nov. 11 at 2pm in the chapel. Reception to
follow in the Wall-Custance Family Reception Centre.

Fred was a holder of both "Member of the Canadian Amateur Radio Hall of
Fame" and "Canadian Radio Amateur of the Year" awards. His contributions
to amateur radio and amateur radio causes are legendary. A favourite
personal project, the Hammond Amateur Radio Museum, has recently been
```

reorganized and reopened at the family-owned Hammond Manufacturing
Company facility in Guelph, Ontario.

> [...] Knight R-100 receiver ... 100kc crystal calibrator
> Tony

Tony,

One more thing to add to the others. When adjusting the frequency of the calibrator onto a WWV signal, be sure to do it during a time when the WWV tone is off. When there are just the ticks (not the digital buzz). It is possible (if the crystal will go that far) to mistakenly zero beat to one of the tone sidebands rather than the carrier.

Regards, K9DCI

From: Charlie Vaughn <cvaughn3@bellsouth.net>
Message-ID: <V0FV3.689$I23.3159@news1.atl>
Source record: 76569

Several years ago I had an excellent HRO-60 which I sold along with the original manual to a ham in California. In cleaning up the shack recently I came across a very good copy of that manual. Its about 50 pages, includes the schematic, section 6, the XCU-50-2 Crystal Calibrator, the NFM-83-50 Narrow Band F.M. Adaptor and type 650S Vibrator Power Supply material. The accessory section has schematics too.

I will ship it to the first person responding for $10.

This a very good copy of the manual, front and back copied, but it is a copy, NOT THE ORIGINAL.

E-mail me @ cvaughn3@bellsouth.net

All prices plus shipping from 07657.

1.) RCA 810 triode. JAN type CRC-810. Pull from unused equipment. $45
--With Johnson socket and Triad F-33U filament tranny $60

2.) Penta Labs PL-254W Triode. Pull from unused equipment. $25

3.) Pair of Japanese WW2 vintage 807 tubes. Manufacturer logo unknown (I

can't read Japanese:)) Type number UY-807A Nicely made, obviously
military (ceramic/metal bases, heavy duty structure, straight bulb).
Person I got them from pulled them out of a captured radio in '45 Test
like new. $30

4.) Pair of GE 7027. Test good in GE boxes--appear to be somewhat used.
$20

5.) 3 Pcs Amperex "Bugle Boy" 12AX7/ECC83 NOS/NIB The originals--not the
Richardson knock-offs. $30 each or 3 for $75

6.) General Radio (manufactured by Tektronix) X-Y display scope. Great
for checking phase shift, plotting output of a curve tracer, or just
hooking up to your system for the "trippy" lissajou display.:) Great
condition--VERY bright CRT with no burns. $40

7.) HP 651A Audio Oscillator. 10Hz-10MHz sine wave. 19" Rack Mountable
Good condition. $85

8.) Boonton Radio (HP) 202H RF generator 54-216 MHz AM/FM Rack Mount
Good condition $65

9.) Tektronix R5103 oscilloscope. Mainframe is in good working
condition. Accepts all 5000 series plugins. Comes with 5A16 dual trace
amp and 5B10 timebase. Plugins need work. $40

10.) A bunch of NOS tubes. Mostly RCA, GE, Sylvania. Many industrial
types.Want to sell them as a lot. $300 for the lot (191 pcs) Types and

6067. Market value of HRO dial and right angle drive?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-08 00:00:00 UTC
From: k9sqg@aol.com
Message-ID: <19991108185437.06169.00003502@ng-fa1.aol.com>
Source record: 76578

Thinking about selling a National dial from an HRO series of receiver, has the large metal skirt with the windows containing the digits, and also have the right angle drive that controlled the capacitors. Would like to know market value for either posting an ad or going Ebay. Might even keep it for nostalgia but don't know market value.

Thanks for reading this posting.

I am looking at purchasing a power xmfr that weighs 170 pounds. Measures around 14 by 14 by 20 inches tall. Anyone know of a way to get it (name of compnay? phone number?) from Blairstown, NJ zip 07825 to San Diego CA zip 92139?

Any help greatly appreciated. It exceeds the weight limits of UPS. FedEX and Airborne not an option either.

Lane --

I had the same problem several years ago when I shipped my old tower to a buddy in Texas. On the drive into work, I simply jotted down the names of various freight firms from the trucks I passed on the highway, and called them. If they're national, they'll be able to tell you the nearest freight office in Blairstown, as well as pricing etc.

Also, I'd build a wooden crate for the puppy...

Try calling the manufacturers of the iron. The usual steel companies, like Armco, etc. They can refer you to sources of laminations and give you catalogs. Who knows, they might even give you samples.

My wife loves old radios and at last weekend's Livermore swapmeet she spied what turned out to be a Hallicrafters SX-28. By the time she found me and the family wallet, she was heartbroken to find the fine old receiver had just been sold.

We've got a wedding anniversary coming up and I would love to be able to surprise her with an SX-28, preferably operable.

Can anyone help me?

No offense to Mr. Dahl, I'm sure he builds an excellent product. As any of you know, HV transformers are getting like hens teeth to find. Even Fair Radio Sales has only a small selection any more.

Other than cannibalizing old transformers, does any one know of a source for "E" and "I" pieces for the core of a transformer? I would like to try my hand at winding transformers. I did it as a teenager and got pretty good at it.

Many thanks in advance.

Check with a moving van line. We often carried single piece items
among the houshold or two or three we prime loaded. Rates will be
cheaper too. (my rates guess is based on '76 rate. I have not run
'bedbug express' since then)

good Luck... LCM

I have wound loads of them. I find that some of the cheaper mains "auto transformers" of the kind that transform 115v to 230v or 230v to 115v are dirt cheap. The sort I usually get are about US$6, made in Spain. Undo the two bolts and the whole lot almost falls apart.

there's hardly any wire on the things, so you can strip it down in a few minutes and have a perfect plastic bobbin to fit the E and I laminations. Just two small words of warning:

1. Don't consider re-using the wire or using it as a ready-wound primary. The last few I bought in Saudi did not even use copper wire!!
2. Lightly varnish one side of the laminations with a decent spray varnish. They are usually lousy insulators and the txfmr tends to run hot if you don't.

The transformers I make all run stone-cold. if you want to see a 50-watt transformer in a project then i have one on the web. Take a look at http://sm0vpo.8m.com/tx/2tubetx.htm the third picture down the page. Sorry the picture quality is so lousy, but - a) it does the job - b) its free.

Hey!

While mobiling around, and working those rare DX stations, I have found it rather frustrating to scramble for paper and pen. I don't have an easy way to install a laptop in the car, either.

So, I thought, "I can use my Palm Pilot" and create a memo. But that was a bit of a pain. What to do?

Create a log program! That's what I did. It is now version 0.1 -- and works ok.

You have a Palm Pilot? Wanna use this logger? Come download the free Application at:

http://hfradio.org/softdown.html#hflog

I have been using it during my jaunts. Helps. It is very simple, and very basic.

Send comments to: hflog AT hfradio DOT org (you can figure out the address)

In other news: The NW ARRL (Northwest Section of the ARRL) website is now hosted at http://hfradio.org/nwarrl/ - and I have been appointed as new Webmaster. If you are in the NW, and have updates, etc., please let me know. If you are interested in the NW Activity, etc., come check it out.

Also, I am still offering free websites for HAM and SWL sites. Want to make your own page? Come and fill out the form.

Don't forget: http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you

are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Just a caution based on my experience with similar shipments.

Trucking companies may charge considerably more if you want the shipment delivered to a residence. If it's feasible, you can save money by having it dropped off at their nearest terminal, and you arrange to pick it up there.

What do you think about finding a junk welder to get the transformer core out of? They are large and have few turns of large wire to remove. I have one, and someday.....
Mike

One source of cores that may be good subjects for winding are industrial isolation transformers.

They come in various KVA ratings - starting around 1 KVA and going up. They are complete with both primary and secondary wings and may be 1 to 1 or 2 to 1 or higher. You may find them at a dealer that handles industrial surplus.

They have an advantage in that you know they can handle the power and they already have the primary (you have to make sure that the secondary is on the outside) so there's less work to get the final output voltage you want.

Hi All. I am new to the tube world so go easy on me (Hi Hi). I have an amperex 7753 thbe with a very nicely manufactured socket that I will sell and cover shipping, best offer, unsure of value. Socket and tube appear to be in good cond. Pulled from scientific equiupment. I will probably be posting some doorknob caps, vacuum caps, air variable caps and hv transformers in the next day. I do not have the capacity to test this tube so make offers accordingly. Tnx, Will, N1PXA

I have a like new condition Wireless set 19 MkII. It includes the
variometer,
hf antenna mount, uhf antenna, cable and mount, one control box and
cable,
one original key, one set of headphones (mike removed), and a simple AC
power supply to operate the receiver portion mounted in the supply unit
#1 case.
The receiver works great I have not tested the TX portion.

Like to trade it for solid state HF gear miltary or commercial or might
sell.

I shipped a Collins KWS-1 and 75A-4 from California to Kansas via
moving van without any problems. They just wrap the item in ship-
ping blankets and wait for a truck going to the desired destination.

SORRY, BUT THIS ITEM HAS BEEN SOLD......
Charlie Vaughn <cvaughn3@bellsouth.net> wrote in message
news:V0FV3.689$l23.3159@news1.atl...
Several years ago I had an excellent HRO-60 which I sold along with the original manual to a ham in California. In cleaning up the shack recently I came across a very good copy of that manual. Its about 50 pages, includes the schematic, section 6, the XCU-50-2 Crystal Calibrator, the NFM-83-50 Narrow Band F.M. Adaptor and type 650S Vibrator Power Supply material. The accessory section has schematics too.

I will ship it to the first person responding for $10.

This a very good copy of the manual, front and back copied, but it is a copy, NOT THE ORIGINAL.

E-mail me @ cvaughn3@bellsouth.net

73,

Charlie

I guess by now it's obvious that I am "really cleaning out the shack" from all the listings I have been doing on this board. I confess, that's true. The idea is to pass on to those that are collecting, those things I collected for many years. So here are the last of the Collins manuals.

THESE ARE COPIES, GOOD COPIES, BUT NOT ORIGINALS.

I have left the following:

1. Instruction Book on the 312B-4 and 312B-5 Station Controls.

2. A complete 75A-4 Instruction Book

3. Instruction Book on the KWM-2A

4. Instruction Book on the 32S-3 Transmitter

5. Instruction Book on the 30L-1

6. An original February 1, 1965 Collins Amateur Radio Equipment price list. (small)

7. Instruction sheet on the 516F-2 Power Supply

8. Instruction Book on the 75S-3B and 75S-3C receivers

I am looking for offers on these items. First come, first served, via e-mail. cvaughn3@bellsouth.net

73,

Charlie

Unless it's an antique or something very unique, I wouldn't even consider shipping something like that. You should be able to buy a power transformer from any local electrical supply for less than you'd spend on shipping.

Hi Fellas;
This is the probably my last posting as i only have few of these left.
Please do not say you want one and not follow thru, last time there were a
few that did so!
I have for SALE:
A Bunch of 40 meter cw Qrpp transmitter circuit boards, all complete and just
require a 40 mtr xtal, power and antenna. They come with a schematic and are
new!
They are 3 transistor, 2-2n2222, 1-2n3053, have toroid output, some may differ
slightly and all require 12 vdc.
Maybe can be used as a driver? Experimental? Power out is Very low, My
wattmeter hardly moves.
Please do not ask technical questions as I am not technically oriented.
I have placed a .JPG picture of it on my site so if you have questions or
want to see it, heres the URL>>
http://member.aol.com/rlucch2098/qrpp.jpg
Some may vary slightly from this picture.
Price is $13.20 ea. ppd Priority mail.
Thanks es 73....Rich WA2RQY (1961)

6139. "Just a Common Soldier"

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-10 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <80assbfrf1@news.hawaii.edu>
Source record: 76457
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.boatanchors,rec.radio.amateur.policy

"Just a Common Soldier"

He was getting old and paunchy and
His hair was falling fast;
And he sat around the Legion, telling
Stories of the past.
Of the war that he had fought in and
The deeds that he done,
In the exploits with his buddies, they
Were heroes everyone.
And tho' sometimes to his neighbors,
His tales became a joke,
All his Legion buddies listened, for
They knew whereof he spoke.
But we'll hear his tales no longer,
For old Bill has passed away;
And the world's a little poorer, for a
Soldier died today.
He'll not be mourned by many,
Just his children and his wife,
For he lived an ordinary and quiet,
Uneventful life.
He held a job and raised a family,
Quietly going his own way.
And the world won't note his passing,
Though a soldier died today.
When the politicians leave this earth,
Their bodies lie in state,
And thousands note their passing
And proclaim that they were great.
Newspapers tell their life stories,
From the time that they young,
But the passing of a simple soldier
Goes unnoticed and unsung.

Is the greatest contribution to the
Welfare of our land,
A person who breaks promises and
Cons his fellow man;
Or the ordinary fellow who in times
Of war and strife,
Goes off to serve his country an
Offers up his life?
It's so crazy to forget them,

For it was not so long ago,
That the "Old Bills" of our country
Went to battle, but we know,
It was not the politicians with their
Compromises and ploys,
Who won for us the freedom that
Out country now enjoys.
He was just a "Common Soldier"
And his ranks are growing thin,
But his presence should remind us,
We may need his like again.
For when countries are in conflict,
Then we find the soldier's part,
Is to clean up all the troubles that
Others often start.
If we cannot give him honor, while
He's here to hear the praise,
Then at least, let's give him homage,
At the ending of his days.
Perhaps a simple notice
In the paper that would say,
"Our country is in mourning,
Cause a soldier passed away."

Unknown

At at the National Memorial Cemetary of the Pacific ("The Arlington of the Pacific") we'll have our annual Massing of the Colors which includes an Army 21-cannon salute and an Air Force Missing-Man flyover. I hope you all will also take time out at "... the 11th hour of the 11th day of the 11th month..." to salute and give thanks to those who've kept us and continue to keep us safe. We owe them so much.

Looking to buy a used 3300 to 3500 plate xmfr at 1 amp or greater. Must be shippable by UPS (ergo, under 150 pounds boxed and ready to go). Or you must be within 2 hours of San Diego CA.

240 primary a must. 120/240 volt primary okay. A center tapped unit is okay, such as 6600 volts center tapped, etc.

Well Done Jeff
Reminded me of the bugle call TAPS.
According to legend (not sure if it is true):

A Memorial Day Tribute
The origin of "TAPS"
Author unknown - received via e-mail from Mac McClendon

In case you ever wondered where "Taps" came from and the words
to it. We have all heard it many times but few know it's origin or
the
words. In 1862 during the Civil War, Union Army Capt. Robert
Ellicombe was with his men near Harrison's Landing, VA. The
Confederate Army was on the other side of this narrow strip of
land.
During the night, Capt. Ellicombe heard the moan of a soldier who
lay wounded on the field.

Crawling on his stomach through the gun fire, the captain reached
the stricken soldier and began pulling him toward his encampment.
When he finally reached his own lines he discovered it was actually

a Confederate soldier - but the soldier had died.

Suddenly, the captain went numb with shock. In the dim light he
saw the face of the soldier - his own son. The boy had been
studying
music in the South when the war broke out and, without telling his
father, enlisted in the Confederate Army.

The heartbroken father asked if he could have a group of Army band
members play a funeral dirge for his son at the funeral. That
request
was turned down because the soldier was a Confederate.

Out of respect for the father, however, they said they would give
him
one musician. He chose a bugler, whom he asked to play a series of
musical notes he had found on a piece of paper in the pocket of the

dead youth's uniform. That music was the haunting bugle melody we
now know as "Taps".

Day is done. Gone the sun,
from the lake, from the hill, from the sky.
All is well. Safely rest,
God is nigh.

Thanks and praise, for our days,
'neath the sun,'neath the stars, 'neath the sky.
As we go, this we know.
God is nigh.

I have had ancestors in every war since 1861 several KIA, so yes we do and
will remember.

I have an HW-100 and an HW-32 that I started to restore, but haven't finished. Cosmetically both radios are ok. The HW-100 works on receive, and I started to replace some of the capacitors in the final amplifier. The HW-32 doesn't have all of the original knobs. I also have a Heathkit AC-1 antenna tuner that I'll add to the package. I have the manuals, or copies of them, plus an HP-23 power supply. I'd like to sell the whole thing as a package. Asking price is 135.00 and we can split shipping. I can be reached here or at 520-790-8361.
Thanks,
Spencer KC2TX/7

Looks like a pretty common x-ray tube to me, probably a pull with either a bad filament, or a puncture arc and the tube as filled with air. These things are collectors items? How many would you like?

Just retubed my TS830s with a new pair of 6146W's. After setting
bias to 60mA per the manual, found that there was no RF output.
Should bias be set differently for the W's, and are there any other
mods required for these ruggedized power-pentodes.

Want to trade my GPR90RX receiver for some Collins or Drake equipment or will sell for $550 plus shipping. The GPR is in good condition and works well. It has the front panel data plate. S/N 1XXX.

I already have the C-line, TR4-C and a 51S-1.

Email me what you have and condition. I can send you a pic of the GPR.

6171. 1955 2 valve / tube kit of parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-10 00:00:00 UTC
From: Bob <merryprankster@cwcon.net>
Message-ID: <EunW3.552$C4.26262@news1-hme0>
Source record: 76489

Hello All, Bob here. I am in N/West UK.
I have just (last night) Bought at a silent key sale,
a 2 tube wireless, kit of parts.

It is for a two tube set, its complete...
Apart from the building /assembly instructions.
It has a list of parts, and the list is complete.
I want to build this kit, as I have been wanting
to 'get into' Tube / Valves for ages.

Have you a schematic, for a 2 tube AM /MW receiver.
Or possibly ? If I tell you of the components,
could you point me in the right directions.

It was made by E.M.I Institutes in 1955

The main bits are, as follows.--------

The 2 tubes.
1, is a Marconi. N 17 / 3S4
2, is a Marconi. W17 / DF91
It says, or equivalent, but I have the stated tubes.

It has 6 Resisters, 2 x 47 K, 2 x 2.2 M,
1 x 100 K, 1 x 680, all 10%.
1x 1/2 meg volume control

It has, 6 waxy / looks like ceramic type,
1/2 in square Caps, 3 x 100 pfd. 1 x 500 pfd.
1 x .01 mfd. 1 x .1mfd.
And 1x 25 mfd 25 V Elec. cap.
And 1 x 500 pfd Variable.

1x Double range coil.

Have Any of you, a schematic that fits these components ?
I know the variable is for the tuning.
I have built transistor radios, RX and TX,
I have U.K. Novice licence.
I have had NO experience, with Tubes, in any way.
Can you recommend a book, about the very basics of such ?
Thanks Bob

Mark,
It is almost impossible to find this low freq. crystals these days. You may want to use FT241 crystals which is still available from some old timers. Brown colored FT241 fundamental freq. is marked freq divided by 72 (for 438KHZ, closest channel freq is 31.0 MHZ) and black color FT241 is divided by 54. (for 438 KHZ, it is 23.7 MHZ) For 472 KHZ, use channel 34.0 MHZ for brown and use 25.5 MHZ for black color. You have to use adaptor for mounting into HC-6. as FT241 is same as FT243 for pin spacing and size.

You can also disconnect the old can and leave it in place for aesthetic reasons, then wire the new individual capacitors under the chassis. Nobody will be the wiser unless they sneak behind your back and pull the restored radio out of its cabinet :-) Be sure to secure the new ones so they're not floppin' around.

Tom -

I took 20 18,000 ohm 5 watt carbon resistors and paralleled them between two pieces of perf board for spacing, placed them in a tupperware type container for waterproofing. It worked out great. I made two of them to terminate a 20 meter sloping inverted 'V" with 100' legs (7dBd gain wire antenna).

Are there any problems using ferrite cores for power transformers? Amidon lists a number of E cores and bobbins. Come to think of it, I put a few projects on hold cuz I couldn't find a large enough transformer for the power supply. Never thought to wind my own, even though I recall now watching my father painstakingly stack little iron pieces...

Michael.

Source record: 76397

The 1A1 Plug In Pre-Amplifier was used in the old 545 series CRO's back in the early 1960's. There were 2 versions of the pre amp, one which was largely solid state (used a couple of Nuvistors) and the other version which was all solid state.
A friend of mine (VK4CI, not on the Internet) has the all solid state version but the manual is for the earlier partly solid state model.
Looking for a circuit (or handbook) of the fully solid state version of the 1A1 Plug In.

Source record: 76403

Obviously not. But I have a DX-100 that I am restoring and there is a 20-20-20 mfd capacitor that does. Now from what I have read on this newsgroup, the word is not to trust old electrolytics but rather replace them. Problem is, the price of this Astron EYT 1040 after US-Can exchange, duty, shipping and our GST is going to cost me nearly Fifty bucks - Canadian that is.

While I really want to keep original in the restoration, this one can hurt.

Does any one have a used and tested Astron 20-20-20 mfd @450 WVDC to sell that won't cost me my arm or leg? Or is there an alternative route I can go?

William

Open up the can, remove the old caps and place individual electrolytics
inside. I do this all the time on antique radios.

6197. For sale: Gonset GSB-101 linear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-11 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <382a914b.6012502@news.pipeline.com>
Source record: 76407

For sale: a Gonset GSB-101 linear in excellent condition.
All original except that the T/R relay has been modified for modern
transceive operation (bypasses amp for receive in standby postision).

The unit uses four 811A tubes with an RF output of 600 - 800 watts,
depending on loading and how hard you want ot work the tubes.
Cosmetics are very good to excellent.

I'd rather not ship the unit due to its heavy weight. Asking $250.
I'll include some spare 811A's.

My QTH is in Connecticut.

73,
Doug/WA1TUT

Well that's great, Mark! If I'd known about you five years ago,
you'd have a barn full of these tubes by now.
Assuming you're serious and will pay shipping charges,
you're the first one I've found (except for Compactrons-
I did find a couple of people who will take them).
I'd be far happier to give these
to someone rather then throw them away. I will file your
email and contact you the next time I have a pile.

Previous owner attempted to convert the 10 meter tap to 6 meters. No tubes. Power supply checks out at 2340 vdc and the filaments in another set of tubes I had dropped in lit up (this one does not come with tubes however). T/R relay engages as it should. All is their to put it back to stock configuration. Overall condx around an 8/10. Have manual.

I was going to drop in a pair of 8874s or 4CX400s (same filament voltage as the 572Bs) but decided I already have enough projects.

$150 + UPS charges on 42 pounds from San Diego 92139

This outstanding and hard-to-find book
covers the equipment of the Signal Corps in 1916.
Covers telegraph, telephone, undersea telegraph cable, etc.
It does not cover radios
but I included it because so many people here
are interested in early telegraphy and telephony.

Now $150 + UPS charges on this six tube amp running six 6JE6 tubes. 500 watts into my Bird 43. 80 to 15 meters. Very small and compact. Near collector quality. You will not be disappointed. No manual.

Add UPS charges on 40 pounds from San Diego 92139.

I have at least 20 squirrel cage type blowers, still sealed in original foil wrap, military surplus. They run on 200 VAC, 3-phase 400 Hz, and at 6000 rpm. Unit is about 6" long (motor and blower housing) and has a 2" square air output port. May be useable on older military tube type radios. Made by Western Gear Corp, Applied Technology Division. FSN is 4140-00-899-7750. $6.00 each or 4/$20. NOTE: Please REMOVE the two "88"s to reply or call 334-347-5281 day/eve/wknd.

Source record: 76435

Hello All, Bob here. I am in N/West UK.
I have just (last night) Bought at a silent key sale,
a 2 tube wireless, kit of parts.

It is for a two tube set, its complete...
Apart from the building /assembly instructions.
It has a list of parts, and the list is complete.
I want to build this kit, as I have been wanting
to 'get into' Tube / Valves for ages.

Have you a schematic, for a 2 tube AM /MW receiver.
Or possibly ? If I tell you of the components,
could you point me in the right directions.

It was made by E.M.I Institutes in 1955

The main bits are, as follows.--------

The 2 tubes.
1, is a Marconi. N 17 / 3S4
2, is a Marconi. W17 / DF91
It says, or equivalent, but I have the stated tubes.

It has 6 Resisters, 2 x 47 K, 2 x 2.2 M,
1 x 100 K, 1 x 680, all 10%.
1x 1/2 meg volume control

It has, 6 waxy / looks like ceramic type,
1/2 in square Caps, 3 x 100 pfd. 1 x 500 pfd.
1 x .01 mfd. 1 x .1mfd.
And 1x 25 mfd 25 V Elec. cap.
And 1 x 500 pfd Variable.

1x Double range coil.

Have Any of you, a schematic that fits these components ?
I know the variable is for the tuning.
I have built transistor radios, RX and TX,
I have U.K. Novice licence.
I have had NO experience, with Tubes, in any way.
Can you recommend a book, about the very basics of such ?
Thanks Bob

I recently acquired a Drake TR4-C that had been stored in a dusty environment for a couple of years. What is the best approach to cleaning the accumulated dirt and grime from the top of the interior of this radio. I am assuming that a great deal of the grime entered through the perforations in the top cabinet. Thanks in advance and 73

Looking to identify " odd tube items", that's how they were described on
e-bay, so I bought them out of pure curiosity.
Appears to be some sort of crystal tuner set. Two pieces. One has power
supply and various taps for capicatance and inductance. Other has crystal,
mV meter, 6V6 tube, taps for H,H,B+,B-. Has large variable coil of some sort
with two taps on it. Numbers on units are; AF10-49-16-0-2874-105 and
AF10-49-16-0-2848-3. Any body have any ideas??
Any comments would be appreciated as I know absolutely nothing about this
type of equipment.
Thanks
Andy

Ed --

Isopropyl (sp) alcohol works fine, as well as a mild solution of Murphy's Oil Soap in warm water, followed by just plain warm water. Use Q-Tips for those hard to get places. Use caution when rubbing over things like Quality Control stamps, tube names etc; them may come off; so experiment carefully first.

Hi,

I have forsale a Heathkit DX-60B and a Heathkit HG-10B. Both units are complete, and I have a partial manual for the DX-60B (reproduction).

The DX-60B is in good condition (dusty) with original knobs, clean front panel, and no modifications. The HG-10B is clean, however, the exterior case was repainted a dark green. The dial drum is in good shape with no visable cracks.

Price for both is $65 US plus shipping from Clarksville, Maryland 21029.

Thanks and 73,
Michael

6248. FS: SHARP! Drake TR-4, MS-4, AC-4

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-12 00:00:00 UTC
From: W4DAS <dcb@ecqual.net>
Message-ID: <382ce1b6@nntp-out.newsnerds.com>
Source record: 76308

I have an excellent condition Drake TR-4 for sale. It is a 9+. The copper chassis is bright with minimal tarnishing. The case is almost like new. The front panel is very nice - lettering is sharp and no scratches. Includes noise blanker board. And it works. I have the MS-4 speaker and AC-4 power supply in matching condition. Original boxes and factory service records for all three pieces. Original manual for TR-4 which also covers AC-4 and MS-4. Also have unused Drake logbook from 1974. A superb rig - best I have seen in a long time. Asking $350 plus shipping from Stuart, Florida 34996

6251. Wanted: "Hammarlund"

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-12 00:00:00 UTC
From: inthewoods@olympus.net
Message-ID: <inthewoods-1211992205070001@ptpm068.olympus.net>
Source record: 76311

To give my Hammarlund HQ 180 a perfect face once again, I need the name "Hammarlund" to replace the broken "Hamm...lund" So, before you really do try to secure your boat to the bottom with your Hammarlund shortwave, I'd really appreciate your removing the name first. Thanks.

6252. So much for the capacitor problem - cause by shorted main transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-12 00:00:00 UTC
From: William Brown <trainers@sympatico.ca>
Message-ID: <382B683F.4CE6CFC1@sympatico.ca>
Source record: 76354

I bought a DX-100 with the intent of restoring it. I just fired it up
and discovered that the main transformer (54-31) smokes more than I
do.

Are there suppliers or is there anyone who would have such a beast, or
can I substitute
it for smaller, close approximation transformers?

Any help is appreciated.

William

6253. FS: BC-221

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-12 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19991111201722.16003.00000187@ngol07.aol.com>
Source record: 76355

Hello Folks,

I have for sale a BC-221-M, serial number 379. This unit uses 6K8, 6SJ7-Y, and 6SJ7 tubes. The metal case has been repainted a gray-green, (looks like a nice repaint job) but the internal front panel is the original black. Has the calibration book, but the nameplate is missing, so there is no way to tell for sure. Zeroes on all check points except those at the extremes of the ranges. Crystal still zeroes with WWV. Works very well.

This unit has the following modifications:

1) The original output connector was replaced by a red plastic 5 way binding post (takes banana plug, phone-tip, spade lug, bare wire, or alligator clip). Easily replaced with output connector of your choice. (The original was gone when I got this unit).

2) Power on-off switch was removed and wires sleeved together. Will include a matching DPST toggle switch, if you want to return it to original condition. (The original switch was gone when I got this unit).

3) A homebrew, filtered, regulated, transformer operated power supply with for 120 VAC is installed in the battery compartment in the base of the unit. The power supply is mounted on the hinged rear door of the battery compartment for easy access. It uses a 6X4 rectifier and 0C3 regulator tube, and is fused, but there is no power switch. I installed this supply several years ago, to eliminate the need for dragging around an external one. Runs cool, even after many hours. Can be easily removed if you don't like it.

A complete set of tested spare tubes is included.

I'm asking $50 plus shipping from 19087. I've had it so long I'm not sure when I got it - more than 20 years ago, for sure. I have used it for testing and calibrating many homebrew rigs over the years, and also tried it out in the FMT with a BC-348, back when the FMT was still being done. (Did pretty well, too - average error under 60 ppm).

My reasons for selling are two: First, a few years ago I got a really nice LM-20, which is smaller and can do both modulated and unmodulated output. (no, the LM is not for sale!) Also have several junker LMs to keep it going for a long time. Second, I have moved to a house with less room for radio stuff, and I have to reduce "basement boatanchor inventory" as much as possible.

Please save this classic from eBay!

Walter;

On this NG, it is better to use FA than FS when an auction is involved. That way, people who don't want to do the EBAY thing don't have to plow through irrelevant e-mail, they can filter on "FA".

regards,

Jon P

Does anyone have any info (apart from the operating instructions on the back of the case) for an 'AVO Test Bridge'. This is a capacitance bridge that uses a single 6B8G (pentode double diode). I have one which is working but needs calibration. There are two obvious adjustment pots inside the case, but the whole thing is a little cramped and the circuit will be very difficult to trace without disassembling the whole thing. It is about the same size as an ordinary AVO multimeter, with a large dial calibrated in capacitance and resistance and a small (2" scale) meter. Any info appreciated.

Andy Cowley

Ya need good old iron for low frequency.
Ferrite is only good for high frequencies.
I'm sure others can suggest the minimum
frequency for ferrite, but is's not 60Hz.

6271. APS-104 radar modulator unit

Source record: 76373

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the two "88"s to reply or call 334-347-5281 day/eve/wknd.

I have replaced the lithuim battery with a coin cell holder using a #32
coin type. Had to run a small twisted wire back to the board. No
problems. Now I just change the coin wafer out of a permanenet holder
mounted inside the radio.

You could try accessing the website of Mauritron and checking them out. I've had spectacularly good results from them on every circuit or handbook I've enquired about and they are pretty reasonably priced too!
http://www.mauritron.co.uk/mauritron/

Good luck de Ken

I hope that you plan to find out why the transformer smoked before putting a new one in. It would be a good idea to replace the filter caps and bring the unit up with a variac while monitoring the current drawn by the transmitter.

6290. FS: Delay Relay Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-12 00:00:00 UTC
From: ovrreactor@aol.com-nospam
Message-ID: <19991112172102.28415.00000195@ng-bx1.aol.com>
Source record: 76392

I am selling 29 assorted delay relay tubes. These were included with a bunch of tubes that I recently bought from a retired repair guy. He claimed that these are all new/unused, but have been reboxed into plain white cartons. They appear new, but since my tube hobbyist activities are limited to audio, I have no way to test or verify them, therefore I must sell them "as-is".

I would prefer to sell the whole lot to a single buyer to make things easy, but I will consider breaking the lot up if I can't find a home for the whole pile. The list is at the end of this post.

Please make offers by EMAIL (do not post).

Regards,
Tom Mitchell

Looking for a transformer for an otherwise serviceable GLA-1000B. Original transformer is 110/220VAC Primary and 800VAC (1 amp?), 12VAC, 6.3VAC secondaries.

The 800VAC is the most important.

Dahl has it but at about $170 shipped, it is more than the amp is worth!

Look in your "someday project" box...

For sale: a Gonset GSB-101 linear in excellent condition.
All original except that the T/R relay has been modified for modern
transceive operation (bypasses amp for receive in standby postision).

The unit uses four 811A tubes with an RF output of 600 - 800 watts,
depending on loading and how hard you want ot work the tubes.
Cosmetics are very good to excellent.

I'd rather not ship the unit due to its heavy weight. Asking $250.
I'll include some spare 811A's.

My QTH is in Connecticut.

Hello !

I would like to buy a Knob for the Attenuator
(for the 1db/Step),
from the Tektronix "Tracking Generator TR 503".
Part Number for the Knob is 366-1645-00, which is obselete/
no longer available at Tek.

If there is anywhwere outside in the world this part
waiting in a dusty corner and wants to change the owner,
please let me knew.

Thank you,

Jorgen

6311. Need info on Johnson Matchbox

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-13 00:00:00 UTC
From: k9sqg@aol.com
Message-ID: <19991113095156.08589.00000775@ng-bj1.aol.com>
Source record: 76324

Does anybody have a picture of the old Johnson Matchboxes? I'm interested in one for the 275 watt and 1,000 watt models. My interest is to determine what type of knobs are used for the swr forward/reverse and set functions. I have three Matchboxes and they all have different knobs. The instruction sheets don't have any pictures, and the Johnson catalog that I have has a picture that is too small to determine the type of knobs. Thanks.

Source record: 76330

Thanks to all that contributed their ideas about the odd
12-volt ART-13. While there was no definative information,
the best speculations suggest a commercial post-war
modification for use in maritime or airline applications.
A lot of that went on 1945-1955.

TNX OM DE Dave Stinson AB5S

I have a 735, non working for a parts , or project radio.
The outer cabinet is in poor condition, the front panel is missing the plastic door, but otherwise front panel is in good condition.
Electronically, the meter kicks upon turn on, and the display is different everytime. No RX or TX.
I have no history on it, but the interior looks good, including the SSB filter standard setup.
Part out, or fix, it's your choice. Shipped for $120 73, K4GJ

6342. FS: 1929 Atwater Kent sales poster

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-14 00:00:00 UTC
From: mavn@www.com
Message-ID: <38301090.613445318@news.concentric.net>
Source record: 76205

It's 9 3/4" wide by 14" long, wrapped in plastic with a piece of cardboard. I don't know if it's originals, but the date 1929 is written on the back in pencil. Here's what it says:

"Choose the Atwater Kent Screen-Gred Set for distinguished performance. Choose the cabinet to harmonize with your furniture and hangings. This is easily done with Atwater Kent Radio - for more than a score of the finest furniture designers are creating cabinets expressly for it. The Variety of their treatments gives you freedom of choice in style and price. Now YOU, with your own good taste, determine how your radio shall look.
Thus modern radio appeals to both the ear and the eye. For the radio within the cabinet - the instrument that brings you entertainment from the blue distance - is the Atwater Kent Screen-Grid - greatest of a long line of famous receivers - the radio that does what every radio would like to do.

On the air - Atwater Kent Radio Hour, Sunday Evenings, 9:15 (eastern time) WEAF network of N.B.C.
Atwater Kent Mid-Week Program, Thursday evenings, 10:00 (Eastern time) WJZ network of N.B.C.

Atwater Kent Manufacturing Company - A. Atwater Kent president - 4765 Wissahickon Ave., Philadelphia, PA."

The picture shows some affluent people relaxing in riding attire and top hats around a big "tallboy" radio. Had I a scanner I would post it for you to examine. If you have any questions please let me know. I'm open to offers, and will expect payment by money order before shipping.

Do you have one to sell for $100? You must be thinking of a different radio or perhaps it's time for your next dose of medication.

73,
Steve W2ZR

I do not have any for sale. I have 2 of them and both are in use,
along with the matching transmitters. One 1051 cost me 50 dollars
and the other cost me 75 dollars...both in perfect condition.
Also, I am not on any medication. However, if you want to pay
550 dollars for a 1051 then you must think it is worth it.
God bless.

Hey Guys,

I think the last "going" price on "as is" 1051's was when
murphy was selling them for $125 last summer. Their gone now
and most of em needed work. The shock mounts are $25 and available
everywhere brand new. Ceavets: The het osc xtal for the 15
mhz band was bad on all 3 of mine, The reference osc can
be cranky(let it warm up for a day before digging in) and
I had two dead motors out of the 4 rigs I worked on(one was for
a buddy). They do weigh about 80 lb. and I think it cost
about $165 to get one to Cleveland from Murphy's (125 for the rig
and 40 for the UPS man). The manual will cost you about $50
and you'll probably need it. The connectors for the audio out and the
line cord will run you $25 as will the shock mount. Once I got mine
going I would have to say that I would not part with them for
less than about $375 without the manual. Mine are NOT for sale!
So I guess $550 may be a bit high but if someone went out
and replaced the $47 dial lamps, who's to say.

Just my 2 cents worth.

In article <80mi01$a37$1@nnrp1.deja.com>, ed_engelken@my-deja.com says...

>I have been using Go-Jo hand cleaner for both chassis and cabinet
>cleaning. Use the plain, white Go-Jo without the pumice, perfume, etc.
>Go-Jo removes grease, dirt, and grime of all kinds and can be safely
>used indoors. Best of all, your hands are clean when you are finished!

>Apply with an old toothbrush and wipe off with paper towels.

Go-Jo ranks right up there with Sprague "Orange Drop" film capacitors
on that list of simple, yet inherently beautifully perfect manufactured
products... :^)

I like the other poster's idea of shaping the toothbrush into an "L".
I'm going to try that, and this, on the next cleanup/restoration job.

I've previously had fairly good luck using 409 on cotton swabs for the
usual accumulation of dust on chassis tops... but have always been a
little concerned about the water base promoting rust on any steel parts,
if it dribbles into a spot where you can't dry it off right away.

C.K.

Today at a swapmeet I found a canoe anchor/lunch hook from GE. It is model 260, broadcast and shortwave with loctal tubes and built in Willard wet cell. The case is aluminum painted grey/green hammer tone. Does anyone have info on this set?? My guess is late '40s-early '50s. Is no lightweight for a portable battery/AC set so pushes the edge of BAism . Thanks for any help.

I modified mine for PTT (and also use of a footswitch on CW) by adding a small relay under the chassis. The contacts are in parallel with the transmit switch, and the coil runs off the filament voltage. A small connector out the back of the chassis controls the relay.

I bought and used a BRAND NEW RAL-7 back before I was first licensed
in the 50's - it was a super-regenerative job, built like a
battleship, and tuned from somewhere down around the BC band up to
around 18 mhz as I recall...

Hey Hobbes,
It depends on what the dirt is. Dust is a different problem than cigarette smoke stains. Try blowing it out first with an air compressor. After that, I have had good luck with Windex, 409 and other mild cleaners. My preferred applicator is a used toothbrush with the head heated a bit and bent back to make the bristles point out like the letter L with a fuzzy bottom.
Good luck,
-- John

Gee,
I know the cost of labor today is high,
but $285 is about the worth of a Valiant.

I recently paid $300 for a Valiant with a vitually perfect
front panel/bezel/xtal knob, although the cabinet has a few
scratches.

If we in the hobby start paying these rates for restoration services,
it would cost $1000 to restore a Valiant that could be sold for $500
(if one is lucky).

Sort of like paying $15000 to restore your 1985 Chevy that would be
worth $2500 after restoration.

Great little radio, works great, has its own internal vfo, or you can use
the crystal to get you on the 6m Am frequency.
comes with D104. You just "plug and play". It has its own pwr supply, so
everything is right there, just add your antenna and have fun on 6m AM.
$150+ shipping of $10. gheath1@nycap.rr.com or 518-383-8655

Hi Doug,
Sounds like you got a very good deal on the Valiant. Repainting the cabinet is fairly easy but the front panel is something else. If your front panel is perfect, you're lucky.
The cost of restoring a car or a radio (one needing restoration) exceeds the value of the restored car or radio every time. If a person wants to have a perfect Valiant on their desk, they pay for it. In the future, the $300 will probably seem cheap.

73,
Steve W2ZR

I have been using Go-Jo hand cleaner for both chassis and cabinet
cleaning. Use the plain, white Go-Jo without the pumice, perfume, etc.
Go-Jo removes grease, dirt, and grime of all kinds and can be safely
used indoors. Best of all, your hands are clean when you are finished!

Apply with an old toothbrush and wipe off with paper towels.

Source record: 76280

Hello:

Have for sale the original Collins shipping carton for a 75S-3B receiver.
According to the box, the rig was serial # 16518. Box is properly marked,
COLLINS Radio Co. etc.
Rig was shipped to Hatry of Hartford, from Collins of Cedar Rapids, Iowa.
Not sure how this box ended up in my garage. Figure it was via a garage sale or
yard sale and someone passed it to me, to pack my purchases in. Or maybe I
bought a piece of gear and the box was used to pack and item sent to me.
Anyway, I'll take the BEST OFFER for this vintage & collectable box. No joke.
Send same to me via Email. I am not looking for the moon here and prefer to
sell this to the owner of the actual unit.
THANKS

Might anyone be able to help with an original or photocopy of the manual
for the Rycom R-1655 VLF receiver? Rycom still has them but wants $100
for one! I'd be glad to cover reasonable costs.

Jim Mandaville, KF7A, Tucson, AZ

6409. WTT: Icom IC-730 for IC-740

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-14 00:00:00 UTC
From: W4UDX <W4UDX@juno.com>
Message-ID: <382EE40F.6FC31887@juno.com>
Source record: 76288

Want to Trade:
Icom IC-730 mobile HF for Icom IC-740 Base HF radio.

IC-730 HF mobile is in super near-mint condition with original
pre-amplified hand mike and owners manuals,
power cable and original box. It works beautifully with 100 watts + out
on all bands. Includes WARC bands. It is
basically the mobile version of the IC-740 radio and even looks very
similar only smaller. I got it with the intention
of trying HF mobile, but my old little Honda Civic is just too small for
such a feat.

Would like to trade for the Icom IC-740. Must be working properly and
in at least good condition (cabinet
scratches OK, but no front panel scratches or missing lettering or
un-original knobs). It need not have the internal
power supply. Must include mike, manual and power cord or I can keep
mine.

E-mail W4UDX@juno.com Thanks.......Mark

6410. FS: Mastercrafters 24 hour World Clock

Newsgroup: rec.radio.amateur.boatanchors

GoJo really works well on cigarette smoke infested radios. I just reworked a NC-183 that had belonged to a 5-pack-a-day-smoker. That explains why I survived to get the radio - I don't smoke! The GoJo did a nice job on the cabinet and chassis. Try GoJo and let us know how it works for you.

A few months ago I broke up and listed a complete Heathkit station.
Everything sold except for the 301/600 combo, which I appearantly
priced too high. I have slashed 100 dollars from that price and had
my friend list it on Ebay. This gear was believed factory assembled with
seals, owned by ONE NON SMOKING ham and seldom used but only
exeersiced. It really is a good deal ,, perhaps you should take a 2nd
look at this new reduced price. Thanks all !

6435. HELP!!! Wanted: Motorola FMTR-40V(D)1 Tube portable

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-15 00:00:00 UTC
From: mark@kelltech.com
Message-ID: <38306335$0$2477@news.en.com>
Source record: 76114

I desperately need a Motorola FMTR-40V(D)1 tube two way portable radio unit. This was part of the "research line" from the late forties to mid fifties. This particular unit was used on police motorcycles during that period. I need this for a 1952 Harley Davidson Police bike that I'm restoring. These units were typically removed from the bikes before the bike was sold at auction. I am interested in ANY pre 1970 police motorcycle radio since I can use it as trading fodder for things I need for this bike. I hope somebody can help me.

6436. FS R-1051B Military Receiver

I have an R1051B in very good condition for $450. For jpgs just ask.

From Ostermans:
Built from 1960 to 1981 by General Dynamics (some by Stewart-Warner), designed by Bendix for military use (many replaced the r-390s). Used by U.S. Navy and is optimized for independent sideband reception. Double conversion on low freqs.
Read out is decadic digital knobs. Weighs around 75 lbs (more when some accessories are added.
Current Osterman's value is given in the range of $300 to $550.

Radio Shack used to sell 20 watt, 8 ohm non inductive resistors.
They go for about $2 each. 6 in series will yield 48 volts but
the resistors are +/- 5% tolerance, hence, it was easy to cherry
pick to get an exact 52 ohm load. Price was $12 and works great
up to a hundred watts for limited time periods.

Joe

There's a limit to how far you can/should etch. I don't know for
sure how far it is. Dad did his own grinding and in his materials I
believe it says it is just the last 100-200 KHz. The powders in Dad's
stuff have no distinguishing markings. They are just gray powders.
A few weeks ago a poster said he used auto rubbing compound on
crystals with success. Tooth paste also is a fine abrasive. It polishes
plastic very well. However I don't know the effect of such smooth
surfaces on crystals.

Hi all

I have a nice Marconi Atalanta that works perfectly however I have a friend who has one that is not.

He thinks it needs re-aligning but has no trimming tool. Does anyone have one they wish to donate or sell to me?

Failing that a drawing of one for me to copy.

Many thanks

Simon

I have seen what this "BEWARE" stuff can do to a NG. Just take a look at the dying rec.radio.swap. Nothing on that group anymore of any value. Lets keep this one clean. If you have a problem with someone the chances are that it can be worked out. Otherwise use the normal procedures but don't clutter this NG up with that stuff.

thanks.

Now....flame away all !

Source record: 76131

Yep - Sure this is a pretty common mod. The switch bypasses the xtal filter on the RX board to give it about 6 Mc selectivity. This was useful for 15 meters as a novice calls CQ - he can listen for replies without doing to much knob tuning. Back then, Novices were required to use fixed freq crystals.

This mod required that you use coax and a single pole single throw switch. Using regular hookup wire would not allow enough signal isolation and would affect the selectivity.

If you plan to actually USE this rig - you might want to think about this... -ALL- HW-16's had nasty chirps. The reason for this is that:

(1) The power supply which was shared by the RX was unregulated.

(2) The B+ line is used and tied together batween the OSC - DRIVE and FINAL PA sections of the TX. When keyed down the voltage would drop on the OSC causing a chirp.

What I did on mine was (1) Remove the B+ in the OSC section. (2) Drilled a hole and installed a OA2 voltage regulator in a small space to the right of the 6GE5 tube. (3) Tie the B+ of the RX into this OA2 and then tie the tube into the OSC section so the B+ voltage to the OSC is always regulated.

Result is a very nice T-9 signal.

Even when tripled (15M)

Hope that helps...

WD0HCO 7.045 Mc - Early mornings

Hi folks I posted a new condition DX-394 General Coverage rcvr with original box, packing, antenna
all papers, Kiwa AM-SSB filters, B upgrade, not one scratch.
Prestine condition original owner.$150
Guess what !
About 15 big Ebay people called about this item with the same story.
"I dont care how good your Ebay response records are NO COD's, Checks, Donate it for Jesus, ect"
Furthermore NO I will not go down to $75 *because its an 8 year old radio* tactic
only to see it pimped on Ebay for $225

$75 !.............. some of you people piss me off.
Just my opinion regarding *some* characters.

The original intent of the mod was to allow SSB and AM reception on 40 meters. It did work... to some extent.

However, your comment abt ALL rigs hving chirp is incorrect. For some reason, the 1970 datecode rig I have (my original novice rig) never gave out chirpy signals. Chirp depended on crystal activity. Older crystals (ground for a higher freq) generally did not chirp much but those xtals with pencil lead (graphite) for a lower freq usually chirped or didnt oscillate at all.. THe HW-16 I have now has never chirped, xtal or VFO, 80m or 15m.

6466. Re: Info needed on crystal grinding

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-15 00:00:00 UTC
From: larryc@northwest.com
Message-ID: <3830EC86.7B7@northwest.com>
Source record: 76145

when i was a novice in the early 70's, i used 600 grit wet-and-dry sandpaper.

grinding the crystal in a figure-8 manner, light pressure, would move the xtal quite a ways. I would re-pack the xtal, after washing it off, and tune up for the xmit birdie. if i ground too far, then i'd rub pencil lead on the xtal face to lower the frequency.

hope this historical stuff helps...

Collins Winged Emblem KWM-2 with Collins Noise Blanker.CCA Very Good condition. It is working perfectly with new finals and full output. Good audio reports. The front panel looks great with no scratches or wear marks.The rig has been aligned.It has the COLLINS NOISE BLANKER installed. The Noise Blanker has new tubes also. All other tubes have been checked and weak or poor were replaced.The rig has been mobile & has signs of wear on the cabinet but there are are no dents. The paint looks good. Manual copy. $725 plus Shipping.

From Ostermans:
Built from 1960 to 1981 by General Dynamics (some by Stewart-Warner), designed by Bendix for military use (many replaced the r-390s). Used by U.S. Navy and is optimized for independent sideband reception. Double conversion on low freqs.

Read out is decadic digital knobs. Weighs around 75 lbs (more when some accessories are added.)

Current Osterman's value is given in the range of $300 to $550.

I don't understand the datasheet filament specs...it says:

"The 8974 has a two section thoriated tungsten filament mounted on water-
cooled supports. The two sections may be fed in quadrature to reduce hum
contributed by an arc ac power source.

Huh? Filament quadrature feed? Does this mean I and Q filament supplies?
...And what's this arc ac power source?

Quadrature feed refers to feeding the 2 filament sections from a centertapped transformer, so that the voltages/currents end up 180 degrees out of phase, and the resultant hum will cancel.

The "arc" appears to be a typo. It does not appear in my Eimac printed catalog.

quadrature does mean 90 out of phase, effectively "doubling" the freq that the filament operates at.. (2 pulses 180 out for each phase) As for arc, I would imagine (at that power level) they are referring to a mercury arc type rectifier. They were avaliable in a number of single and polyphase configurations. (The single unit would be an "Ignitron")

Yep, and they do a fine job of keeping the bench from moving in strong winds. They do just fine with a 35ft wire mounted just under the garage ridge beam @ about 15 ft. I've used other ant.s and plan a loop but that wire seems all they need.

Good luck and Happy BoatAnchoring!!

i have a few items that i will sell or trade. making room in the shack.

1. mint mororola radius P-200 with key pad HT. large style drop in charger,and two new unopened spare 9.6volt 1000mah batteries. this is a UHF UNIT. used maybe 3 times. asking $250

2. H.P. 7550A color ink pin plotter I bought for a work project that never happened. I have 20 extral pins for the unit. with all books. this is a 9 pin unit. asking $275

3. ROCK-0-LA Juke box. Model 424 serial # 294654 100 selection 117volt. this is a 205 watt unit that will drive up to 12 wall box units. this is a 70's unit which i bought as my wife deciede she wanted it in the den then changed her mind ??????(i know this has never happened to anyone else). has set for 5 yrs in my workshop. I live in central ky and would drive this thing very heavy 200 miles to meet you or you pick up.
some slight pitting on chrome. unit lights up and record pickup starts to retreave records but stops i think gear grease is dirt are the problem.
will trade for collins 32v2 or 32v3. or globe champion 350A or king 400 / 500 with vfo and all coils. cash offers considered.

4. MFJ MODEL 407B deluxe keyer mint . used maybe a dozen time . but i have misplaced the manuel.
asking $50 for trade for JT 30 Mic with stand or HG-10B vfo.

I collect hallicrafters knight kit and WRL and will have more as i work my way into the back of the work shop.

6514. West Instruments Corp Meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-16 00:00:00 UTC
From: Ralph Cameron <ralphc@igs.net>
Message-ID: <80s3kp$p3q$1@news.igs.net>
Source record: 76175

I have aacquired a West Instruments Corp large scale analog meter. It appears to record temperature and has a place for a 1.5V DC battery nd screw terminals for a resistance bulb. The input can be 230/115 and there is a trip point or set point on the front which is done by a mechanical linkage.

West don't appear on the web so may be long out of business and as this meter may have been a type of recording thermometer,. I'd like to get it working. Anyone familiar with this instrument from the mid 60's?

Thanks

Ralph Cameron

6515. WANTED: VACUUM CAPS (FIXED)

I need some large fixed-value vacuum caps.
These are about six inches long and two inches in diameter
with metal end caps for snapping into a big holder
on each end (looks like a big fuse).
Need 50, 100, 150, 200 and/or 250 PF.
I have lots to trade- please state your interests.
Can also purchase.

Thanks!
Dave AB5S

From what I understand, yes, they are no longer showing up on their web site. I don't know if this is permanent, no demand, or temporary, market temporarily saturated. An alternative I have heard is 572B.

6521. What to do with this RF generator?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-16 00:00:00 UTC
From: "George R. Gonzalez" <grg@umn.edu>
Message-ID: <80sb7q$4f8$1@news1.tc.umn.edu>
Source record: 76182

At a used industrial supply place I found a "Technics" (not Panasonic) RF generator. It has a 13.5Mc crystal
driving a 6AU6, driving a 6AQ5, driving what looks like a heat-sunk 8122. After the 8122
there are two pi-networks, apparently to match the wild kinds of inductive loops
often used for RF heating.

It does light up a 150watt bulb with RF with no problems. No more info on this beast.
I hate to part it out as it does work and the construction and parts quality is top rate.

Any ideas what this could be good for?

The tuning will probably reach 20 meters, but
it probably doesnt have enough B+ filtering to run CW.

Any ideas appreciated.

- George

Ebay Lover, while scurrying in the shadows, anonymously squeeked:
>
> Dave,
>
> Looking for some more inventory for EBAY?

Nope.
I've got some very large (over 6 feet tall)
Marconi ship to shore transmitters
here that use vacuum caps
and I'd like to bring them back to life.
Beautiful rigs from the mid 1940s.
I and some friends rescued them
from an old barn in central Texas.
If you'd like to see what they look like, click-

http://www.arc5.com/misc/marconi1.jpg

Speaking of life- I've got a brain, a spine
and a name here in my inventory for you-
slightly used but in good shape.
The previous owner took them out to play with on occasion,
so they should fit you well.
When you decide you want to get a life, let me know.
I believe in charity for the mentally challenged
so will only ask that you pay shipping on them.

Kind Regards,
Dave Stinson

charset="iso-8859-1"

I recently picked up a small military receiver at a local radio club
raffle. I was hoping that someone on the list could help me identify what
model it is by my description. There are no model markings on it of any
kind. It looks to be part of a larger, modular unit. There is a date on
the back associated with the date of fungicide treatment, December 1944.
The radio is 9 in long, 5 in. high, and 4.5 in. deep, olive drab front
panel with white lettering. Frequency coverage = 3.8 to 6.6 Mhz. Tube
lineup: 1L4, 1R5, 1L4, 1S5, 3Q4, and 1R5. It has 3 IF transformers.
Controls on the front are labelled: "Dial Light push", "Tuning",
"Phone-CW-Net-Cal." (selector switch), "volume", "Sensitivity" (hi-med-lo
selectable), and has 2 phone jacks with the spring loaded cover caps on
them. There is a small switch on the back, labelled "impedance- 250/4000".
Below this is a male power connector with 6 prongs, looks like a Jones
connector. Overall a neat little receiver.

Any ideas?

73,

Mark, AB0CW

i have 2 marconi AM transmitters with 110 ac volts power supply for
sale. i also have a 32 volts dynamotot power supply
they put 60 watts on ten channels between 1.5 mhz and 5 mhz. two 6159's
modulated by two 6159's. real clean and nice construction. you can buy
it now and i will deliver to milton vermont or at rochester n.h. hoss
trader next spring. it is heavy with the power supply. they were
manufactured around 1950. the plate mentions 1939-1956 or 1943-1960. it
uses 10 crystals and the if is 465 khz. it also has 10 variables air cap
for tuning the 10 channels.
asking $150 usd delivery included to the mentioned hamfest. luc ve2lgj

No problem... its the receiver from the BC-1306, the predecessor to the AN/GRC-9 (Angry-Nine). The '1306 receiver only covered 75 meters, unlike the GRC-9 which covers 40m, too. It runs on 1.5 and 105 vdc. What I don't remember is whether the 1306 receiver requires a small 4.5 volt bias battery.. the GRC-9 receiver does. It plugs into a tube-socket like plug on the center rear of the chassis. I use 3 AAA batteries on my GRC-9. Any help?
Regards de Jeep/K3HVG

I have one 50pf 32KV and one 75pf 30KV. I have also a variable vacuum
capacitor of 75pf 45KV.
These are NOS caps. I don't think they have ever been used. They
really look excellent.
I have had them for many years, and I really don't know their value.
Give me a decent price, and they are yours.

Best regards,

Arnold Goks yr

I have an Halicrafter SX-62 communicatios reciever. When you frist turn it on the audio is fine. After ten minutes or so, the aud io starts ot get distorted. It keeps getting worse as the radio heats up. I am new to electrons and I figure amateur radio operators know a lot about this stuff. Please. I love this old radio and I would like to keep it working. Can anyone help me on this. Thank you.

Richard..

By "Quadrature" I think they meant the more general meaning of
the word, meaning "at right angles", not the color TV implication.

By feeding one half of the filament with AC that's 90 degrees
out of phase with the other half, the peak voltage on one will
coincide with the zero of the other, keeping the average temperature
more constant. A biggish choke could provide the phase shift.

Maybe "arc" is a typo?

What's the output frequency? I don't know whether they are still being
used, but diathermy machines were common for medical use. Of course,
they used to be self-excited, not crystal controlled, and lacked
good power supplies, so they'd drift up the band with a horrible noise.
There was a slot for them around 27 MHz. I don't know if they used
other frequencies too.

Amd while the power seems too much, I once spent some time building
epilation machines that used RF to do away with unwanted hair. I
can't remember what frequency they operated on, though until thinking
about it now, I would have said around the same frequency. They were
crystal controlled, and I can picture CB type crystals in them, though
it was twenty years ago.

Part it out and be done with it. Although it could be converted to a 20 meter rig, it would be obsolete.

Recycle the metal, save the parts you need and junk the rest. The chassis would be better served as someone's new Yugo.

Colin

6559. AM and Shortwave Tube Radio Kits

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-17 00:00:00 UTC
From: weathrship@aol.com
Message-ID: <19991117123636.12366.00000229@ng-fk1.aol.com>
Source record: 76077

Hello,
Mediumwave Associates is offering AM and Shortwave Tube Radio Kits
for kitbuilders and experimenters. Based on the AA5 circuit, all NOS or
new parts, used or new or no tubes, optional coil winding bobbins to convert
the RF and Osc coils to different wavelengths. 455kc IF, handcrafted IF coils,
RF and Osc. Enclosed in save, see-thru clear acrylic, clear blue or clear red.

Good platform for adding S-meter, BFO/Gain, calculating and winding coils etc..

See url: http://hometown.aol.com/weathrship/myhomepage/business.html

Let us supply the parts, you build and modify it! Construction manual similar
to the old H-kits, approx 55 pages w/color photos.

For sale from family estate:

Heathkit Model HW-30 2m "twoer". Works (lights and sound) but handle is missing Has original microphone - no manual.

Heathkit Model AC-1 Antenna Coupler no mods to it, but finish needs touchups. SOLD

Heathkit Model GD-125 Q-multiplier. Looks like a factory built job, not sure, Heathkit label with serial # on back.

Heathkit Model HD-15 Hybrid Phone Patch. Comes with all cables and Manual

Heathkit Model HD-15 Assembly manual (there are two manuals for the HD-15, why, I don't know.) SOLD

Yaesu Model FT-270R 2m transceiver. Comes with manual, roof top antennae, bracket, and Hammond power supply (for inside use) - 25W output.

Yaesu Model 200R Mobile Transceiver Sigmasizer 146 - 148 Mhz

Yaesu Model FV 101Z External VFO

CDE Model Ham II/CD44 Antenna Rotation Control (this is so you too can "TWIST AND SHOUT")

That's it for now, looking also to sell a couple of CB's one is a Johnson tube type Messenger the other is a Midland, and a bunch of other paraphernalia.

email me with your offer or questions or whatever.

6567. Need Toyota Radio Speaker Wiring

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-17 00:00:00 UTC
From: putnam.delete@broadcom.com
Message-ID: <80vcha$6a$1@sunset.broadcom.com>
Source record: 76085

I would like to obtain a list of the connections on a Toyota car radio in order to connect power and the speakers. There are about 18 wires protruding from three connectors on the back of the radio, so guesswork seems inappropriate.

The radio is from a Toyota of 1990 vintage and says "electronic AM/FM stereo receiver" on the cassette door. It was made by Fujitsu Ten Limited and carries model number 86120-x4660, where the digit represented by the "x" is obliterated.

Please remove the".delete" in my mail address before replying.

Thanks,
Peter

I have a Radio Shack HTX 100 and I like to work CW mobile. The filter that comes with the radio attenuates the recieve to a level that is almost unreadable. I prefer to recieve in the USB mode when working CW because even though the frequency response is wider, I recieve a lot better. Is there a modification that will allow my recieve to be routed through the SSB filter during recieve in the CW Mode?Does anyone out there have the service manual or schematic of this little rig for sale?

Patrick Green....KC5WCC
Beaumont, Texas

If you shop eBay, be extra cautious bidding on merchandise offered by 1rich aka Rich Schneider, KF2GG. On 4 separate occasions with 4 different hams he has shipped high $$$ ham gear that arrives DOA but is never advertised as such. Use eBay's escrow service if you must buy from him - on these 4 occasions (L4B, 30L1, 32S3 and TR7) he screwed fellow hams. DO NOT READ HIS ADS AT FACE VALUE!

West Instrument Corporation made industrial process oven and kiln controllers and temperature logging recorders. I believe the plant was located in Des Plaines, Illinois (west Chicago suburb). (Do not confuse with Weston, who made electrical meters.) West was bought by Gulton Industries circa 1968, and operated as West Instrument Division of Gulton for a while. Gulton also bought Rustrak Instruments (in East Providence[?] Rhode Island). Eventually, West and Rustrak got merged into an Instruments Division of Gulton. Gulton dissolved around 1976, going into private ownership as, IIRC, Mark IV Industries. It's possible that the West brand still survives, maybe at the RI location of the old Rustrak. I don't think West ever made the transition to electronics, and became marginalized as technology swept past them. I think their stuff would qualify as the boatanchors of process controllers.

From: richcom@earthlink.net
Message-ID: <3836127f.89028378@news.earthlink.net>
Source record: 76005

James McDermott
is nothing but a two-bid crook. He purchased the items, and they were sold As Is, with No Reserve. That means if he won the bid at $20. the items would have been sold to him. First of all, my ad specifically states that I was told by the original owner how these items worked and since I cannot test the items I state that the auction is an AS IS with No Reserve auction. Anyone knows that AS IS is for the buyer to beware because I'm not GUARANTEEING that these items are going to be up to high standards.

Now for James McDermott, the crook. He wrote to me and if anyone wants a copy of his e-mails, I have them. He wrote, about making a claim with UPS on items that were NOT broke, (and who knows if any items WERE broke) and that he would make me a "partner" in the claim and I would come out with money. And then he said. "This is a wonderful country we live in". What does that tell you? It tells me that he is out to make money off of UPS because maybe they pay easily and quickly and I specifically told him that "I am no partner in fraud" I DON'T DO THAT!

Furthermore, before this big Fraud contacted me, he wrote in the newsgroups about learning to tune the LB4. So that tells me that this JERK, played around with the LB4, tried to be a tech and BLEW IT UP HIMSELF and is trying to collect. That's even if it isn't working to begin with.

Any intelligent person knows that an ad reading "AS IS" means just that! That means that I personally cannot or have not tested it myself.

My ads are nothing but honest. I mention if there are scratches, nicks, marks, anything I see with my eye. I am a very honest seller and my feedback speaks for it. You cannot be narrow-minded and just read a few negatives when there are over 130 positives. Of course everyone cannot make everyone else happy.

That's what makes this world go around.

Any complaints that is moron James McDermott has told you about were AS IS auctions.

I think everyone selling should BEWARE of selling anything to James McDermott at 54021 Oak Dale Drive, Oak Lawn, IL 60453.

If you care to see any of his fraudulent offers to me. E-mail me and I'll be glad to send you a copy. This guy is a real two-timing fraud.

He wanted to make a false claim to UPS and now he's trying to get away with a false claim against me! What Next??????

If he is legit, why not go ahead with the claim to UPS and claim damage as he originally stated that the boxes came damaged. What's the problem here? James, call UPS, make your claim!!!!!

This note is to Don Bertone: Please let me know where I can put James' name on a fraud list. He deserves to be there.

6585. FS: [REPOST WIH ADDITIONS] Heath and Yaesu, etc., Make an offer - but be reasonable.

The distributor says there were quality problems in the manufacturing of some of the tubes, and the plant that produced them (they were not made by Svetlana) has shut down. There are obviously still plenty of the tubes around, but I suspect the price of 572Bs will come down somewhat, and since they're a plug-in replacement for 811A's, an adequate replacement tube will continue to be available.

> > there have the service manual or schematic of this little rig for sale?

The HTX100 uses the same filter for SSB and CW. What is different is
the offset of the carrier oscillator and LO, to place the signal at a
different point in the passband. You could change the carrier
oscillator offset to place the passband differently, but this would
result in inaccurate dial readings because the LO offset is switched by
the CPU. If you are having that much trouble, perhaps your CW carrier
oscillator adjustment is misaligned. I've got the service manual at
home; send me private mail if you need the alignment spec.

Source record: 76015

Most likely a resistor or cap has a thermal problem and the value is changing as it warms up. To find it among the hundreds of good ones will require lots of time and specialized equipment.

I'll be glad to do it for $75 - $90 depending on what I find.

Check my site for info:

http://www.megacycles.com

IF you are new to electronics - you should either sell it or keep it in a closet till you learn more. This IS a cool receiver BUT... DONT TRY TO FIX IT YOURSELF!

It uses lethal high voltages
It uses technology that's about 40 years old
Correct hi-volt parts are very hard to find

Changing the tubes is OK but don't EVEN THINK about going underneath the chassis!

Most of the old TV Radio repair shops that fixed this stuff either moved to another business, retired, became blind or just went crazy when throw away solid state stuff came around.

Some of the shops around now... well, lets just say I wouldn't let them fix my toaster...

IF you do plan to fix it locally. Give them a 30 day time period. If they can't fix it by then - they never will. (I've have just fixed some equipment that was parked in a "repair" shop for 3 years.)

Good Luck

-B

Two likely cantidates are the coupling capacitor between the audio driver plate and audio output tube grid being leaky (measure the voltage on the grid of the output tube to chassis with a DVM--it MUST be 0V). The second is a gassy audio output tube. Replace it with a known good one. Beyond this, it starts to get a lot more complex, as another poster implied.

6607. EE-8 Field fones are WAY COOL!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-18 00:00:00 UTC
From: dan harlan <dharlan@ameritech.net>
Message-ID: <38349CE1.87B332C2@ameritech.net>
Source record: 76028

Yo' You's,

A couple weeks ago I traded Sam Heavner (The Signal
Corps) an ART-13 LF VFO for an EE-8 field fone for my SCR-499
restoration and to check out an SCR-299 (with the freaking' truck!!
) restoration I've been working on for a couple years.

Since the beginning of my brief experience with this relic
I have to say that without a doubt "Every call is a pleasure".

They are the perfect "Hamshack" phone, fully compatible
with your phone line, have a "charming ring"(no pun), American
made, so "RF-proof" its scary and they have a PTT sw. on the
handset! Did I mention the wonderful selection of "Earth Tone's"?
Total lack of a Dialer ? It takes "D" cells AND
has a Generator! Manly Indeed.

Funny what ya think about sometimes, ehhh?

It's the receiver control box.
Which model command set receiver are you using?
SCR-274, ARA, AN/ARC-5?
Different models take different boxes.
Do you have the connectors and rack?

Hi,
Sounds like coupling capacito on the audio amp stage. When it is being distorted, check the audio line only see if it makes distortion like inserting audio signal into the grid of the audio amp stages. If not, it is related to the AVC line. Good luck.

does it distort on headphones as well as speaker..?
i never had a 62 but if it has a standby switch what how does the audio
sound when the switch is turned off for 10 seconds and then back on??
if it doesn't have a standby switch then what happens if you turn the
radio off..
listen to the audio, if the on/off is on the volume control unplub it
and see if it plays for a second or two undistorted while the filter
capacitors discharge?
if it's good then you may have a cathode to heater short in one of
thetubes..
do you have a schematic?

For sale from family estate:

Heathkit Model HW-30 2m "twoer". Works (lights and sound) but handle is missing Has original microphone - no manual.

Heathkit Model AC-1 Antenna Coupler no mods to it, but finish needs touchups. SOLD

Heathkit Model GD-125 Q-multiplier. Looks like a factory built job, not sure, Heathkit label with serial # on back. - SOLD

Heathkit Model HD-15 Hybrid Phone Patch. Comes with all cables and Manual

Heathkit Model HD-15 Assembly manual (there are two manuals for the HD-15, why, I don't know.) SOLD

Yaesu Model FT-270R 2m transceiver. Comes with manual, roof top antennae, bracket, and Hammond power supply (for inside use) - 25W output.

Yaesu Model 200R Mobile Transceiver Sigmasizer 146 - 148 Mhz

Yaesu Model FV 101Z External VFO

CDE Model Ham II/CD44 Antenna Rotation Control (this is so you too can "TWIST AND SHOUT") - SOLD

Project Boxes 1411T Hammond 10 x 2.2 x 1.6 inches. These are listed by Allied at $18.00 USD a pop, will sell for $10.00 USD each. Still in plastic wrapper. Ideal for building filters or for hiding Cuban cigars.

Canadian Military Surplus Radiacmeter Gamma Survey. Test radiation in rads or rems (not sure what the r means here) per hr. Made by Canadian Admiral Corporation. Nato Stock No. is 6665-21-870-5440. Army Stock no. is CD W2793716. This is a table top hand held unit. No radioactive standards close by to calibrate etc., but when tuned as per instructions, it gives a reading of 30 r/hr, which I guess is either normal or which tells me to expect that third eye to pop out soon!

Multi meter - Northern Electric Black Bakelite type case. Meter is 20,000 ohms per volt DC and 3000 ohms per volt AC. Ranges - DC - 0 to 600 in 6 steps, DC ma. .06 to 120 in 4 steps, AC Volts 3 to 600 in 5 steps, ohms X1 to X10000 in 5 steps. Last calibrated by Bach-Simpson in 1987.

Multi meter - Radio Shack 43 Ranges, catalog #22-214. Original box and packing, original price tag said $59.95. Not a boat anchor but let's see if it floats or sinks in water :-)

That's it for now, looking also to sell a couple of CB's one is a Johnson tube type Messenger - SOLD

the other is a Midland, and a bunch of other paraphernalia.

email me with your offer or questions or whatever.

but the bandswitch needs contact cleaner. $60 plus S&H.

6619. The Telegraph and the Golden Spike: Origin of the word "ham"?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-19 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <813027$10b$1@news.hawaii.edu>
Source record: 75945
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.boatanchors,rec.radio.amateur.policy

Here's a fascinating page from Coe's book, The Telegraph:

The telegraph was on hand to record a great moment in railroad history when the transcontinental [railroad] line was completed in 1869. The following news dispatch to the New York Times tells the story of the final ceremony:

WASHINGTON, May 10, 1869 -- The completion of the Pacific Railroad monopolized public attention here today to the exclusion of everything else. The feeling is one of hearty rejoicing at the completion of this great work. There were no public observances, but the arrangements made by the telegraph company to announce the completion of the road simultaneously with the driving of the last spike were perfect.
At 2:20 this afternoon, Washington time, all the telegraph offices in the country were notified by the Omaha telegraph office to be ready to receive the signals corresponding to the blows the hammer that drove the last spike in the last rail that united New York and San Francisco with a band of iron.
Accordingly, Mr. Tinker, manager of the Western Union Telegraph office in this city, placed a magnetic bell-sounder in the public office of that company, corner Fourteenth St., and the Avenue, connecting the same with the main lines, and notified the various offices that he was ready. New Orleans instantly responded, the answer being read from the bell-taps, New York did the same. At 2:27 o'clock offices over the country began to make inquiries of all sorts of Omaha, to which that office replied: "To everybody, keep quiet. When the last spike is driven at Promontory they will say `Done." Don't break the circuit but watch for the signals of the blows of the hammer."
[Telegraph wires were connected to the metal head of the spike maul and to the spike. Each blow of the hammer on the spike was recorded as a tick on the nationwide telegraph network.]
At 2:27 p.m. Promontory Point, 2400 miles west of Washington, said to the people congregated in the various offices:
"Almost ready. Hats off; prayer is being offered." A silence for the prayer ensued. At 2:40 the bell tapped again, and the office at the Point said: "We have got done praying. The spike is about to be presented."
Chicago replied: "We understand; all are ready in the east."
From Promontory Point: "All ready now; the spike will be driven. The signal will be three dots for the commencement of the blows."
[Then came the signals corresponding to the actual blows of the hammer.] For a moment the instrument was silent, then Promontory sent the word "done," and the continent was at last spanned with a

continuous rail line from east to west.

Maybe this news story has given meaning to the word "ham," as in "hammer fisted"??? (Just kidding, guys!)

Anyway, it sure is fascinating to imagine wires connected to the hammer and the spike, and with each blow of the hammer, every telegraph sounder in the country clicked!

This is the receiver section of the BC-1306 transmitter/receiver from

WW2. This set replaced the earlier BC-654 and was itself superceded by the AN/GRC-9 by the end of WW2.

I use my BC-1306 and GRC-9 regularly on the East-Coast Old Military Radio Net (OMRN) on 80M.

Richard:

I have repaired several SX-62s in the past. As I remember, they all
used the notorious Sprague "Black-Beauty" capacitors. These are black
tubular units with resistor-like color codes. Black-Beauties are famous
for leakage. My first guess is that one or more of the coupling
capacitors in the audio stages are leaking. The previously mentioned
gassy output tube is also a good possibility. For long-term reliability
you should consider replacing all the Black-Beauty caps.

ROb,

You should be able to use the MUCH more common HP-13 DC supply
to run the MT-1 and MR-1 in mobile service. I've used the HP-23
supplies to run those twins in the house. Just a suggestion.

Good Guy Alert!

I've just completed a transaction with Phil Rutledge, K1HS,
in New Hampshire. The deal was smooth as silk! Phil is a
friendly guy. His description of the equipment (a vintage
Drake 2-Line station) was quite accurate. The equipment
was carefully packed with LOTS of bubble-wrap, and arrived
with no damage. When I hooked the gear up and powered it
up, everything work fine, as promised. I highly recommend
K1HS as a guy to deal with!

>Thanks for any help,
>Massimo Bernabei IW0QC

You're lucky! If you had the R-390A then you would have the dreaded
Dupont PlioBond problem, which eventually kills many mechanical filters.

The 392 has variable-Q tuned circuits, so the problem isnt quite as bad.

First check all the IF coils for opens. Use an ohmmeter, but one
that doesnt put out more than 10 milliamps on it's X1 range (many put
out over 100ma!).

Then check the big long selectivity switch. it may just have a dirty
contact.
It's hard to reach but some careful probing with the ohmmeter
should reveal any open contacts.

Also If i recall correctly there is a switch that puts in various resistors
into the AVC circuit to adjust the gain at each selectivity setting.
An open resistor or contact on this wafer would kill things pretty good.
Better check this one FIRST as it's easiest to check.

If it doesnt die completely, but just gets much weaker,
, you could have an IF alignment problem,
but you sort of implied it died completely.

Regards,

George

For Sale:

Heath HW-16 Transceiver. Excellent condition. Needs alignment
with spare set of tubes. Will sell for $95.00

MFJ 484-B Grand Master Memory Keyer. Has 4 memories for excellent CW.
This keyer includes the AC power supply for 120V AC operation,
and is in very good working condition. MANUAL included.
Will sell for $70.00

Globe Scout 680 AM-CW transmitter.
Covers 80 thru 6m. 50 watts AM, 65 watts CW. Complete transmitter
with all tubes etc. The case needs paint. Front panel is good.
JANUARY 1958. Bandswitching rig with 6V6 crystal oscillator,
6146 final amplifier, 6U8 speech amplifier/driver,
6L6GB modulator, 5U4GB rectifier.
See: http://www.geocities.com/ResearchTriangle/8235/wrl680.jpg
Mods: http://www.thebizlink.com/am/tech/htm/gscout.htm
Will sell for $75.00

Radio Shack DX-160 receiver with matching SP-150 speaker, and
external DC cable. Covers all bands 150 kHz to 30 MHz continuous.
Very good working condition. 120V AC or 12V DC operation.
Includes manual. Dimensions 14" wide X 8" X 8"

See:

One could call the person holding the hammer and making the blows a
"hammer", could one not ? Then if one is a hammer, does he not "ham"?

With any tube-type radio, the first thing to look at are the tubes. Find somebody with a tube tester and check all the tubes. If it's not that, it sounds as if a component is changing value as the radio heats up--probably a paper capacitor (they look like they're filled with was) that ought to be replaced. In fact, with a radio that old, it's probably a good idea to replace all the capacitors.It could also be a resistor going--but if that's happening sooner or later you'll see smoke. At that point check under the radio chasis and replace the resistor that's burned out. You should also check any capacitor that's associated with that resistor, because the leaking capacitor has probably created a short that led to the resistor's failure.(You'll need a schematic diagram for all this--and that's usually at the back of the instruction manual, which you should also have).

Why is it that you are so stupid and narrow-minded that you can't understand or read english? My item was "AS IS" whether you like it or not! Next time, loser, don't bid on something that is a gamble.

Understand the english language before you try to do business.

This will be my last reply to you because you are so ignorant and are a complete idiot! Anyone that basis so much on a couple of negative feedbacks without looking at over 130 positives is a real loser to the American society.

Any intelligent individual knows that there are TWO sides to every story and not just idiot James McDermott's side.

Hey, dopey, what happened to your UPS claim??????? Is it because you were going to try to cheat them and make me an accomplice and I told you "I DON'T DO THAT"? Are you not making a claim to UPS because it did not come DOA and was boxed properly and YOU blew it up??????? UMMMMMMMMM, if you were so legit, GO AHEAD AND MAKE YOUR CLAIM!!!!!!!!!!!!!!!!!

I will not lower myself to either read or reply to anymore of your garbage. Write what you want. Anyone with intelligence can see right through your fraud and nonsense.

6645. FS: Nearly Complete TS520 Station

For Sale: TS520S transciever with CW filter, VFO520 external VFO, SP520 external speaker, and TV502 2 meter transverter. Everything works very well. Cosmetically the VFO and speaker are a 9 of 10. The transverter and radio are a 7.5-8 out of 10. The most serious cosmetic defect is that the transciever carrying strap on the side is frayed. Aside from that the chrome trim on the front of the radio is not as bright as it was when new and the similar trim ring on the transverter has scratches on it. The transverter also has other small scratches on the top and side. To give you idea of how bad they are you must be within two feet of the radio to see them.

I offered this for sale locally but so far have not had any luck. So I am trying the internet.
$400.

I have to part with the following as just don't have the space to store them and they don't get used anymore. Prefer not to ship and will drive a long way to meet you for a sale. Can ship if they don't sell otherwise.

1. Hammarlund HQ-170 - Fully operational, fresh alignment, very nice appearance. This has a new 12 hour quartz movement clock and the cabinet has been refinished (original color, rear panel is original and includes the tube layout). One modification - added a filament transformer as in the HQ-170A, to power the HF oscillator and first mixer filaments all the time the receiver is plugged in. This virtually eliminates warm-up drift. $225

2. Hallicrafters HT-37 - All new electrolytics, other caps, new 6146 finals. Cabinet was repainted but is not the exact original gray. Everything works as it should and the unit has been completely aligned. This is a great CW and SSB rig with good keying and a very stable VFO. $189

3. National NC-300 - A good looking receiver with the original paint. A few paint chips on the cabinet but very clean. Just went over this one very carefully, replacing some resistors that had drifted far out of tolerance. Aligned to specs, and the tuning is smooth as silk. This is a very stable receiver, a good performer on CW, SSB, and AM. Selling it only because I also have an NC-303 which I prefer for CW. $189

All three units have all the original knobs, and they are not broken or cracked.

>too long to generate RF!
>Thanks in advance.
>
>73's Larry W0FLY
>

1. Turn the function switch to STANDBY & let her warm up.
2. Set the DRIVE LEVEL to about 2 1/2.
3. Set the FINAL TUNING control in the desired band area.
4. Set the FINAL LOADING control fully counterclockwise.
5. Set the METER switch to GRID.
6. Turn the function switch to TUNE.
7. Adjust DRIVE TUNE control for maximum grid meter reading.
8. Set DRIVE LEVEL to 2.5 mA of grid current.
9. Change meter switch to PLATE position.
10. Turn function switch to AM position.
11. Adjust FINAL TUNING control for minimum plate current.
12. Turn function switch to CW.
13. Alternately increase LOAD control (adjusting TUNING control for
minimum plate current) to obtain approx. 150 mA at the dip.
14. Recheck grid current and adjust drive for 2.5 mA.

Have fun - the DX-60B is a great little CW transmitter.
73,
Doug, KF4KL

Simplist is always best....as you might not have the equipment or
experience to start measuring voltages, try replacing the tube/s in the
audio section! You might be pleasantly surprised. Tubes are available
from Antique Electronic Supply in Arizona.They have a website. good luck!

6668. WTB: Heathkit MP-1

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-19 00:00:00 UTC
From: dunnr@ix.NETcom.COM
Message-ID: <008901bf3232$d467f6c0$a6f1b8cd@dunnlaptop>
Source record: 76040

Hi All,

Today, on my way back to work from lunch, I found the Heathkit MR-1/MT-1 Commanche/Cheyenne Mobile Receiver/Transmitter pair at my local Goodwill for $50 and couldn't leave a boatanchor abandoned to the "As Is" junk room. They are not museum pieces by any means, the plastic tuning scale tubes on both have the same typical cracking on the ends that I have on my RX-1 Mohawk and the cases/panels are marked and dirty. Still, the aluminium knobs are all there and other then some strange toggle switch mounted off to one side (restorable) the seem intact. Besides all boatanchors (especially AM boatanchors) deserve a home and these now have one.

Only problem is that the MP-1 common power supply for both the recevier and transmitter is missing. Anybody out there have an MP-1 that is orphaned and gathering dust and could be placed back into service or some alternate supply that provides 300 and 600 volts plus filiment voltage. Only a 75W rig so should need too much current (I don't have manuals to determine power requirements).

Source record: 76041

Sorry to send this again but found out that I could also use the Heathkit HP-10 or the HP-20 (prefered as it is AC vice mobile) as will as the MP-1. Also any other supply that can provide the following voltages:

300 VDC, 225 mA
500-600 VDC, 150 mA
6.3 VDC or VAC at 8 A or 12.6 VDC or VAC at 4 A

Rob

Hi All,

For sale from family estate:

Heathkit Model HW-30 2m "twoer". Works (lights and sound) but handle is missing Has original microphone - no manual. - SOLD

Heathkit Model AC-1 Antenna Coupler no mods to it, but finish needs touchups. SOLD

Heathkit Model GD-125 Q-multiplier. Looks like a factory built job, not sure, Heathkit label with serial # on back. - SOLD

Heathkit Model HD-15 Hybrid Phone Patch. Comes with all cables and Manual

Heathkit Model HD-15 Assembly Manual (there are two manuals for this HD-15, why, I don't know.) SOLD

Yaesu Model FT-270R 2m transceiver. Comes with manual, roof top antennae, bracket, and Hammond power supply (for inside use) - 25W output.

Yaesu Model 200R Mobile Transceiver Sigmasizer 146 - 148 Mhz

Yaesu Model FV 101Z External VFO

CDE Model Ham II/CD44 Antenna Rotation Control (this is so you too can "TWIST AND SHOUT") - SOLD

Project Boxes 1411T Hammond 10 x 2.2 x 1.6 inches. These are listed by Allied at $18.00 USD a pop, will sell for $10.00 USD each. Still in plastic wrapper. Ideal for building filters or for hiding Cuban cigars.

Canadian Military Surplus Radiacmeter Gamma Survey. Test radiation in rads or rems (not sure what the r means here) per hr. Made by Canadian Admiral Corporation. Nato Stock No. is 6665-21-870-5440. Army Stock no. is CD W2793716. This is a table top hand held unit. No radioactive standards close by to calibrate etc., but when tuned as per instructions, it gives a reading of 30 r/hr, which I guess is either normal or which tells me to expect that third eye to pop out soon!

Multi meter - Northern Electric Black Bakelite type case. Meter is 20,000 ohms per volt DC and 3000 ohms per volt AC. Ranges - DC - 0 to 600 in 6 steps, DC ma. .06 to 120 in 4 steps, AC Volts 3 to 600 in 5 steps, ohms X1 to X10000 in 5 steps. Last calibrated by Bach-Simpson in 1987.

Multi meter - Radio Shack 43 Ranges, catalog #22-214. Original box and packing, original price tag said $59.95. Not a boat anchor but let's see if it floats or sinks in water :-)

That's it for now, looking also to sell a couple of CB's one is a Johnson tube type Messenger - SALE CANCELLED UP FOR SALE AGAIN!

the other is a Midland, and a bunch of other paraphernalia, like a couple of humungous tunable capactors and wire wound resistors. Look like they came from something the Jolly Green Giant owned!

email me with your offer or questions or whatever.

6679. New tubes available from Micronetics

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-20 00:00:00 UTC
From: neil <neil@aade.com>
Message-ID: <383621E7.7C3C0211@aade.com>
Source record: 75901

Micronetics of Geneve Switzerland has a lot of new tubes for sale at
prices so low that they very competitive even after adding shipping from

Switzerland. They are normally a wholesaler so they do not post prices
but will quote a price for one or more of a type for you quickly via
e-mail.

The inventory is available on my web site at:
http://www.aade.com/tubes/tubes.htm

They have many receiving tubes, Hi-Fi power tubes, transmitting tubes,
CRTs and even TV camera tubes.
For example CRTs are $5 each regardless of type.

I am not affiliated with Micronetics and host their inventory as a
service to the hobby and to draw people to my web site.

All questions, order, and payments should be made directly to
Micronetics.

Hi,

I just purchased a KWM-2 and am looking for some info.

a) What is model # of the remote VFO for it?

b) Is there a Collins newsgroup or mailing list I can subscribe to?

Any help would be appreciated

This radio has essentially the same audio circuit as the SX-42. These radios are notorious for blowing audio output transformers because of the tone circuit. IIRC, there is a cap on the tone switch (bass/hifi/norm/low) that, if shorted, gives a nice path to ground for the B+ thru one of the legs of the output xformer. If this is leaky it could be causing excessive current draw thru the xformer, thereby saturating one half of it and causing distortion.

THis is a piss-poor design, and your FIRST tack should be to replace any/all caps connected to the tone swithc (there's 2 as I remember).

Source record: 75918

I have a large VOM meter whose needle used to be bright orange but is now faded to gray and very difficult to read.

I don't want to add weight to this pointer that it did not have before so I am hesitant on just trying things. Has anyone been successful at recoloring these without damaging the movement or getting paint scattered? My first thought is to find a thin bottle to dip the point in.

73, Doug

Open the meter face in a sterile environment, place paper under the needle, and cover everything else carefully, then spray with Krylon fluorescent orange. Do it in a warm environment so the spray is as fine as possible.

I would have some concern that the paint weight would change the way the
movement operates- has anyone actually done this?

Hi Dale, you need to mix the paint with liquid helium. Then once you
apply it on, you would need to counterbalance the needle from underneath
by simply dipping an ant in J-B Weld. Then carefully cut the ant with a
razorblade and using twizzers place it gently on the bottom of the
needle increasing its counterbalance. Do this till you are able to
achive an S-meter reading of S-9 with an MFJ 259 exactly 5.4" away from
the antenna terminal while tuned on the same frequency. I find this to
be the most accurate method for the least amount of money. 73 Chris

Is it just me, or has everyone on the planet who posts things like
that to this group, and other non-for-sale groups, completely neglected...

rec.amateur.radio.swap

Why do we have a .swap group for this hierarchy if all the FS/FA stuff
(which, BTW, I've filtered out in my newsreader) get posted here?

>>If any of the worthless numbskulls who think they own this group and who don't
>>like for sale posts read this, I hope it spiked your blood pressure 20 points!

I don't feel that way at all. I'm just curious as to why a group that
exists specifically to support FS/FA notices for the entire hamateur radio
hierarchy on Usenet barely seems to get touched, and all the FS/FA stuff
ends up cluttering this (and other) ham groups that were originally used
for technical discussions.

Keep the peace(es).

I have a VC-50-20 Vacuum Capacitor. I know nothing about these, but suspect this is a 50pf, 20KV unit. It is a glass cylinder about 2" in diameter and 2.5" long with brass bottons at each end about 3/4" in diameter. Looks great. Dolinko & Wilkens brand.

I could use any help in establishing value and interest...

6720. FS: TV-7 Adapters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-21 00:00:00 UTC
From: "Daniel J. Nelson" <djn@goodnet.com>
Message-ID: <3A1A03D5.1F75@goodnet.com>
Source record: 75798

I have aquired a number of the original adapters for the TV-7 and other military Hickock testers. These consist of:

Adapter E105 for 3E29/829/832 tubes
Adapter E104 for subminiature tubes (wire leads to octal)
Adapter E107 for 2C39 lighthouse tube

These are NOS and are $5.00 ea + postage.

In addition, I have the making for the grid/plate leads. I have Muller style clips, High voltage test lead wire and EF Johnson Tip pins (won't fint the TV-7/U but good for the /A/B/D units). The color coding would be:

Grid: Black boot on clip, black wire, white tip pin
Plate: Black boot on clip, red wire, white tip pin.

I make these up to suit. $4.00 ea + postage.

Regards,
--

Wouldn't it be a better use of our resources for you to instead go to ebay yourself and do a search for boatanchors rather than posting an open invitation as you did?

Selling an item one place but advertising elsewhere is just a waste of everyone else's diskspace. That's really selfish.

I'll be sure to pass that along to people who sell at the mall but
advertise in the newspaper, sell at the pharmacy but advertise in
the Yellow Pages, sell at the discount club but advertise
on billboards. ;-)

Thank you very much for answering my question. Just out of curiosity how much does the Johnson Viking 122 VFO weigh? As for your comment... I have a Johnson Viking II, a friend gave it to me, Its all there but is in bad cosmetic shape I'm planing on restoring it when I have time, It is truly a back breaker!
Why two Viking II's?... Two's more fun then one:)
Thanks again,
john

6749. Old VFO info?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-21 00:00:00 UTC
From: aardvark <aardvarkiq@JnUaNcK.net>
Message-ID: <3838569B.A943D01A@JnUaNcK.net>
Source record: 75827

I purchased a vfo at an estate sale a while back, it was made by RADIO MFG. ENGINEERS INC. PEORIA ILL. U.S.A. every thing in caps is printed on the face of the vfo. The model is HF 10-20. On the chassis of the vfo is a metal tag that reads "This apparatus is licensed under the United States patent rights of HAZELTINE CORPORATION" then further down on the tag the serial number is HX-146. It has 8 screws(2 for each #) on the back from left to right they are 20, 15, G(one thumb nut), 10, LF. I know that 20 15 10 are the bands, but what is connected to them I am not sure (tuning coils?). also what does LF stand for? It also has a piece of flat coax in the back that I assume that is the out put. I've never seen another and figured that this would be the best place to get answers. A copy of a service or owners manual would be great. I tried to be specific as possible If you need any more info to help me just ask. If needed I'll borrow a friends digital camera and send pics.
Thanks in advance,
john
P.S. who is hazeltine corp.?

Hello, and thanks for reading.

Along with other tubes obtained from an estate (Bob Miller, ex-Engineering Manager
for Hammarlund in Mars Hills NC), are three 6S7G glass tubes each with the following label:

"THIS DEVELOPMENT TUBE
is for Laboratory and Experimental use only,
and is subject to return upon request.

It is the Property of the
RCA RADIOTRON DIVISION
RCA Manufacturing Company
Harrison, New Jersey

Form 9211"

I'm offering these three tubes for one price ($30), and will pay for boxing and shipping within
the continental US. Personal check OK...

see:

6767. HRO-500 help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-21 00:00:00 UTC
From: Clark Thompson <cmthomp1@facstaff.wisc.edu>
Message-ID: <383895B5.3EA1@facstaff.wisc.edu>
Source record: 75845

Greetings,

My HRO-500 died on Friday. The Phase Lock light stays on all the time, regardless of band or synthesizer tuning. I have checked out quite a few things: The harmonic generator appears to functioning normally; The systhesizer comparison IF also appears to be functioning. But the output of the phase detector is always positive (it's supposed to swing from negative to positive when lock is reached). The sweep generator is functioning normally. If I take out the sweep transistor and the mute transistor, I can get the reciever to function but the LO is free running and the synthesizer tuning indication is pretty far off.

So, what's going on? I have checked, but not replaced, most of the electrolytics. Maybe it's one of those. Are there any in particular to look out for? Any other notorious problems?

Thanks in advance,

Clark, KD9QI

Poor contacts are a problem with this rig. Check the band switch by
rotating it a little, gently rocking it. That may help. De-Oxit may be
helpful.

FOR SALE OR TRADE:
Icom IC-730 HF mobile radio. In super nice condition and working perfect on all bands.
Includes WARC bands. Dual-digital VFO's, memories, Speech-processor, RX preamp,
IF-shift, S-units, ALC, RF out, SWR meter. Wide/Narrow NB, Slow/ Fast AGC, Vox
and other features. Includes original pre-amplified hand mike, manuals, cable and box. I
will include an almost new Samlex SEC-1223 23 amp compact switching DC power supply
with original manual and box. Also in super shape. $400 + shipping

Or trade for:
Kenwood TS-830S w/ filters
Icom IC-720A, IC-740, IC-745 with PS (or I can keep my PS)

Email W4UDX@juno.com Thanks..... Mark W4UDX

John,

You can get replacements for $4.50 each from "R&R Designs" On Line Catalog at:

http://www.ipass.net/~teara/heathcat.txt

Just do a search for "Heathkit Belts" which is listed about 2/3rds down the page.

6783. FS: Variable Capacitors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-21 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19991120215413.04977.00000060@ngol02.aol.com>
Source record: 75939

have the following variable capacitors for sale. Shipping (from 19087) is not included. Prices shown are asking prices for single units - let's make a deal! Shipping weights are estimates - you pay only actual shipping charges,

Cardwell JP-48-GD - Split stator variable, 48 pF max. per section. 7 rotor and 6 stator plates per section, .070" spacing. Ceramic and micalex insulation, end plates are ceramic. 3" high, 2-1/4" wide, 6" deep, with 1/4" shaft extending 3/4" from one end. Used, good condition. Shipping weight 1 pound. Asking $5.

Cardwell 7103 - Single section variable, 150 pF max. 20 rotor and 19 stator plates, .070" spacing. Ceramic insulation, end plates are metal. 2-5/8" high, 2-1/2" wide, 6-1/2" deep, with 1/4" shaft extending 3/4" from one end. Have two identical units - one NOS in original box, one used, very good condition. Shipping weight 1 pound. Asking $9 for new one and $7 for used
one. $15 for both.

500 pF Cardwell transmitting variable - Single section variable, 500 pF max. 25 rotor and 24 stator plates, 1/32" spacing. Micalex insulation, end plates are metal. 2-1/8" high, 3" wide, 4-1/4" deep, with 1/4" shaft extending 5/8" from one end. Used, fair condition. Shipping weight 2 pounds. Asking $5

450 pF Hammarlund transmitting variable - Single section variable, 40-450 pF. 24 rotor and 23 stator plates, ,070" spacing. Ceramic insulation, end plates are metal. 3-1/4" high, 4-1/2" wide, 7" deep, with 1/4" shaft extending 1-1/2" from one end. Used, good condition. One of the four ceramic insulators that hold the stator is chipped, has no effect on operation. Shipping weight 3 pounds. Asking $12

The following 3 units are all similar in construction, but vary in details. All are high quality military surplus unit - beautiful construction, but manufacturer and source unknown.

3 gang precision receiver tuning capacitor - 3 sections, each with 7 rotor and 6 stator plates, each section approximately 10-65 pF. Rotor plates on ends of each section are slotted for tracking adjustment. Each unit is shielded from the others, and has its own independent rotor wiper and connection. Rotors are not electrically connected to frame. Rotor shaft is ceramic with metal sleeves, stator insulation is ceramic. Ball bearings, very smooth and low torque. 3" high, 2-1/4" wide, 3-1/4" deep, with 3/8" shaft extending 7/16" from one end. Shaft has metal sleeve on end. Used, very good condition. Shipping weight 2 pounds. Asking $4.

3 gang precision receiver tuning capacitor - 3 sections: Front and middle section each have 6 rotor and 5 stator plates, approximately 10-55 pF. Rear section has 7 rotor and 6 stator plates, approximately 10-65 pF. Rotor plates on ends of each section are slotted for tracking adjustment. Each unit is shielded from the others, and has its own independent rotor wiper and connection. Rotors are not electrically connected to frame. Rotor shaft is ceramic with metal sleeves, stator insulation is ceramic. Ball bearings, very smooth and low torque. Each section has integral air trimmer capacitor, 3 rotor and 3 stator plates, approximately 15 pF maximum capacity. 2-1/2" high, 2-3/4" wide, 3-1/2" deep, with 3/8" shaft extending 5/8" from one end. Shaft has metal sleeve on end, and 1-3/4" diameter brass gear (easily removed). Used, very good condition. Shipping weight 2 pounds. Asking $5.

3 gang precision receiver tuning capacitor - This unit is actually two capacitors bolted together and driven through a set of anti-backlash gears. One side has 2 sections, the other only one. All 3 sections have 9 rotor and 8 stator plates, approximately 12-90 pF. Rotor plates on ends of each section are slotted for tracking adjustment. Each unit is shielded from the others, and has its own independent rotor wiper and connection. Rotor shafts are ceramic with metal sleeves, stator insulation is ceramic. Rotors are not electrically connected to frame. Ball bearings, very smooth and low torque. Each section has NPO 3-12 pF ceramic trimmer, easily removed if not wanted. 2-1/4" high, 4-1/2" wide, 3-1/2" deep. Drive is via 3/16" idler shaft - brass gear doubles as shaft coupler. Used, very good condition. Shipping weight 2 pounds. Asking $5.

--

Big old 3 gang BC tuning capacitor - This is an ancient unit, origin unknown. Rugged heavy duty construction. Front and middle sections have 13 rotor and 12 stator plates, 20-450 pF. Rear section has 16 rotor and 15 stator plates, 20-500 pF. 2-3/4" high, 3-1/4" wide, 5" deep, with 1/4" shaft extending 1-1/2" from one end. Used, dirty and dusty, but tests good, bearings are smooth and can be cleaned up. Shipping weight 2 pounds. Asking 25 cents, or free with any order.

Hello all. I have found a source of EL panel material for
replacement and
experimentation. I have scanned the add out Nuts and Volts
mag. for those
who do not have access to a copy of it. It will be in a
message Subject:

El backlight adv. 80K .jpg

I have no interest in this company nor have I ordered
anything from them.
I just heard of a need for this. I think it was a Radio
Shack Pro 2004 that
the backlight is no longer available. Looks like a fix for
it to me and
you can pick the color!

6789. Re: Does anyone know how to recolor a faded meter needle?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-22 00:00:00 UTC
From: Gord Skiffington <skiffing@nbnet.nb.ca>
Message-ID: <382D4B3C.5FFF@nbnet.nb.ca>
Source record: 75860

Howdy Doug....some interesting (!) replies you got.....personally, I'd remove the basic movement or face (preferable) from the meter, put a piece of paper between the needle and scale and, using a small artists or model brush, apply the color of your choice from a bottle of model paint. This stuff dries quick, if thinned slightly (may not be required) can be applied with only a couple of featherlight brush strokes. I'd bet that you might not even get paint on the paper! An alternative method I've used (made a lot of custom meter faces!) would be to put a small piece of bristol board between the scale and needle (or paper...whatever seems to fill the gap best and can be fit easiest) and stroke the needle with a felt marker...color of your choice - comes out not too bad (mostly I've used this trick with black but don't see why others wouldn't work).

Best of luck....Keep on Tinkering....THAT....is REAL HAM RADIO

I get them just fine. However, rather than posting the photos here it is more polite to put them on a web server and list the URL address in the posting. The reason is that not all news readers work the same and some go out and get everything. This can take some time and if a photo is attached can take much longer. It's much like someone emailing you a photo that you didn't ask for and you are using a 14.4 dialup connection.

Hope that helps and keep the filaments lit.

>Clark, KD9QI

I had this problem, with the same symptoms. It turned out to be a bad
transistor in the synthesizer (where, I don't quite remember). I went through
about three MTE replacements before I got one that worked in the circuit, so
it can be done. The other gentleman's suggestion about cleaning the switch
contacts and the sockets is a must! An oscilloscope helps with this as well.
Keep at it, this radio is complicated but fixable!

Good luck,

Joe W9TXU

6796. More R1051

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-22 00:00:00 UTC
From: dxguy@earthlink.NET
Message-ID: <3838F6E5.6E2E@earthlink.net>
Source record: 75867

Murphy was not selling R1051Bs, he was selling R1051s. Very similar, but not the same re: the 100kC position and method of sythesis (other differences, as well). I bot a pile of them from him at under $100 each, but then I bot a bunch of them and other goodies as well. I bot mine a year before he started moving them out. At the time, he had probably 150 of them stacked everywhere - a great sight. Great A-1 guy, by the way - I'm due for a trip there soon. I got all of mine working with a bit of work, and turning one unit into a hangar-queen for parts. Not a bad Rx, but impossible to do band scans due to motorized tuning and HARD to turn tuning knobs. So, only useful for fixed freq operation (nets, etc.).

Price? About $100 in unknown / repairable condition, B version $50 or $100 higher. In good, checked out/restored condition about $150 to $200, B version $200 - $300 depending upon shipping costs. For $550, there are a bunch of nice Harris or other more friendly rigs available.

I've been using plumber's O-rings for years. Get 'em at your local hardware store or lumber yard for a few cents each. Better material than the original, but retains 100% stock look.

From: Peter Gottlieb <peter_gottlieb@email.msn.com>
Message-ID: <eW5NsVPN$GA.312@cpmsnbbsa05>
Source record: 75869

I am not sure what you mean by the "AC power connector" as there is only a single connector on this power supply. A cable connects this to the amplifier, where the power comes in and is fused and switched.

From the manual:

```
Pin Use
---- -----
A Primary power input for main transformer- hot
B Primary power input for main transformer- common
C NC
D Primary power input for aux circuits - hot
E Primary power input for aux circuits - common
F 115 VAC out common
G 115 VAC out hot
H ]
J ] jumper between H and J powers 400 Hz inverter
K 115 VAC 400 Hz out - hot
L 115 VAC 400 Hz out - common
M +500 VDC
N Common ground
P Interlock - goes to ground on panel closed and not overtemp
R +2250 VDC
```

Internal jumpers select between 208/218/230/242 VAC input.

Be careful with this beast.

Hi,

I want to buy plug in coil forms made by American Phenolic Corporation.
The form material is clear styrene, standard 5-pin (tube type)
configuration. Overall height is 2-7/8". If you can help or know someone
who can, please e-mail directly to me at oldradiodays@mediaone.net

Thanks!

Chaz :-)

6806. FS Kenwood TS-120V QRP As-Is

FS TS-120V (QRP) Kenwood. 25W input SSB/20CW. Abt 12 out. Listing as-is due to no RX audio and carrier appears to be unbalanced. Keys up a steady carrier, but you can see mike audio kicks.
On the RX, you can see the markers and sigs on the "S" meter, but no audio.
The outer case has several blems, but the front panel is quite clean.
Manual included, no mike, but DC cord included.
$ 145 shipped CONUS As-Is condition from an estate. 73, K4GJ

Can somebody volunteer to set up a site to which we could post pictures of things we have for sale for viewing by potential buyers? Set it up so they disappear after 1-2 weeks, maybe, to make it self-maintaining.

That way, somebody with a gadget to sell could post his scanned photo to your site so that anybody wanting to see it could just go there and look. He could do the descriptive text along with the link in his post here, and you have only the photo there.

No dealers should post photos, of course (you don't want to get overwhelmed). Just for one-of-a-kind personal sale stuff. Sure would save a LOT of trouble emailing photos to each inquiry (been there, done that!)

Anybody?

There are plenty of sites that will give you 15 to 20 megs to set up your own site. Do that, put the pictures there and post the URL in rec.radio.swap.

This year I sold a house and a Mercedes 380SL that way.

There is just such a place where you can store digital images for browsing, such as family albums, stuff for sale, etc. and its free. I think it would be up to you to delete the images after you were done with them.
See http://photopoint.com/.

I haven't actually used it but I've taken a look at it and it seems pretty good for that purpose.

73,
John

6829. HFradio.org and HF Logger (Palm Pilot)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-23 00:00:00 UTC
From: nw7us@hfradio.removethispart.org
Message-ID: <QEu_3.2330$RI1.45911@sea-read.news.verio.net>
Source record: 75751
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

Hey!

While mobiling around, and working those rare DX stations, I have found it rather frustrating to scramble for paper and pen. I don't have an easy way to install a laptop in the car, either.

So, I thought, "I can use my Palm Pilot" and create a memo. But that was a bit of a pain. What to do?

Create a log program! That's what I did. It is now version 0.1 -- and works ok.

You have a Palm Pilot? Wanna use this logger? Come download the free Application at:

http://hfradio.org/softdown.html#hflog

I have been using it during my jaunts. Helps. It is very simple, and very basic.

Send comments to: hflog AT hfradio DOT org (you can figure out the address)

In other news: I just added a PREFIX look-up form on the QSL page. If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

Don't forget: http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

I have a pair of Genave Mobiline III VHF FM Tranceivers that I am modifying to operate in the low end of the 50Mhz-6meter amateur band. Does anyone have any kind of information on these radios, ie schematics, service manuals or know of any sources for these. I would also appreciate hearing from any poor soul who has attempted something like this with these rigs.
Thanks!

6833. When Offering a Trade-

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-23 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <383A9E2A.36A7C7EE@ix.netcom.com>
Source record: 75755
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have a humbly-offered suggestion.

When asking about or offering a trade, please tell
the other party which areas and types of equipment
interest you. It is very frustrating to have someone
say: "I might trade. What have you got?"
To which I have to reply: "Lots of stuff- what do you want?"
It wastes time and effort to offer a list of Drake equipment
when the person is interested in Hallicrafters.
Trying to maintain a large trade list- of which 90%
would not be of interest to a given individual-
is also inefficient.

With Thanks,
Dave S.

Source record: 75757

Fool that I am, I keep trying, Glenn.

Every time, I swear I won't go to the trouble
to bring anything ever again to a hamfest.
Every time, I talk myself into bringing something.
And every time, I end up getting miffed because a half dozen people
who don't want the transmitter in the first place
talk down to me about what they paid for it in 1953
and tell me I'm an idiot.
Come to think of it, they might be right-
I did bring the thing, afterall ;-).

People can blame whomever they want for the decay of hamfests,
but if reasonable sellers aren't supported by reasonable buyers,
they can't bring neat things to hamfests.

Another humbly-offered suggestion:

A simple sale of what you have and subsequent purchase of what you
want will open up the markets considerably for you.

Also, when making a listing, use the term"FS/trade:" in the subject box
if you want results.
When a seller says he will trade for something, don't ask what he wants;
just tell him what you have. Whenever someone asks me what I want, I
tell them I would like a new Corvette. If they don't have one then the
obvious thing will have to be for them to tell me what they are looking
to get rid of.
Most guys who just say they want to "trade for something" which means
they are just looking to clean out the shack and aren't picky about what
they want for it. You can usually get a good deal with those
guys(including myself) so don't try to pin down the seller. Just send
him the list of junk you want to unload and see if you get lucky!

Source record: 75762

I'm selling these because I can't lift them anymore.

Hallicrafters HT-9 transmitter. It's complete with tubes and osc coils. I think I may have some plug-in final coils for it. All the original knobs. Some cabinet surface rust. It's been stored for the last 30 years or more and is a great candidate for a makeover, although I think you could get it up and running pretty easily now. I have an original manual that goes with it. If I had a SX 28, I'd have to have one of these to go with it. 1938 Vintage! Sold AS-IS $150.00

Hallicrafters HT-41 Amp It worked when it was taken out of service about four years ago. It belonged to a smoker, so, it'll need a deep cleaning. It should look fine after that. It comes with 4 spare 7090 finals. (I was told they are good, but no guarantees) Also, there is a homemade TR switch for it and the original manual. Sold AS-IS $300.00

These are pick-up only in Tulsa, Oklahoma.

Interested parties please respond via E-mail only.

Thanks for the read and bandwidth!

6844. HRO 60 with A/B/C/D/E/F coils & matching spkr

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-23 00:00:00 UTC
From: "Yves A. Feder W1UX" <y.a.feder@snet.net>
Message-ID: <383AD52B.A32C8AE@snet.net>
Source record: 75766

Very nice looking National HRO60, everything works very well. Xtal cal
puts out 1000KC but not]100kc. Have a 100kc xtal for buyer to play
with. Extremely sensitive and excellent selectivity. S meter
occasionally sticks on high end; every once in a while there is some
noise with no ant.connected (probably cap leakage) but reseating a tube
or two gets rid of it completely.
Former owner put a product detector in NBFM plug inside;
there is a nicely installed toggle switch just to the right of the
"Sixty".
Has A,B,C,D coils PLUS E & F coils (with dial scales!) the
E&F are actually HRO50 coils but obviously they are perfect for the 60.
Also has matching large National speaker (with a replaced
driver some time ago) and manual copy.
Because of everything going together on this one (WILL NOT
SEPARATE COILS OR SPEAKER) price is $600.00.

Pickup at Killingworth, Ct.

HOMEBREW pp 813 AMP: 80 - 10, professionally built by NY Broadcast engineer. , in two 3' 19" cabinets (one RF, one PS) works on 117VAC. Currently driven by a Viking Ranger II with modified audio (sorry that is not for sale) Has internal fan with timer, built inHV variac (1300 - 3000VDC), excellent metering. With Ranger final resonant current at about 120 mA amp puts out at least a 375W carrier. I use it on 80 and 40; will work on 20, it is bandswitched through to 10m (although I only use it on 80 and 40.)

Pick up only at Killingworth CT $600 includes spare plate transformer.

What are your thoughts on eBay listings that include statements such as "this tube type (fill in the blank) was store for 30 years. I plugged it in and the lights came on and the meter seemed to work, but I have no way to test this ..... blah, blah, blah"

Would you be more willing to bid it if it hadn't been plugged in at all?

So what if the filament winding is still good, and the type 47 lamp still lights?

Does it matter to you?

Personally, I pass these offerings by.

And I don't look for listings in this newsgroup, either. I do browse the eBay system though.

Hi,
Looking for a Direct TV DSS satellite dish setup. Have
ham gear to trade or cash. Used Ok. Must work.
Replacing one damaged by near strike and homeowners wont pay so looking
for something used. Most places out here want you to
subscribe for a year of service minimum, but I already subscribe.

Looking primarily for secondary receiver + card, but will consider
buying
entire setup including dish if UPS shipping is reasonable. I already
have the original dish which seems to work fine, so, just receiver +
card
is OK. Must be DIRECT TV since that is what I subscribe to now.

Please state what you have (model, etc), condition, and price.

I have ham gear for trade including HF, VHF, and UHF gear if you
prefer to trade instead of cash.

thanks,
Joe K7JOE

6868. Help! Need manual for Yaesu FRDX400-Can Trade!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-24 00:00:00 UTC
From: mjzuccaro@aol.com
Message-ID: <19991123235945.12674.00001373@ng-fw1.aol.com>
Source record: 75697

Guys:
Just picked up a Yaesau FRDX400 receiver at a junk sale, complete with 2&6 meter converters. Nice unit,first Japanese radio I've owned. Found some Heathkit manuals too, and I have a lot of other manuals that I'd be glad to copy in exchange for a service manual for the 400.Test gear and some amateur stuff. Lots of audio,if you need it.

Can anyone help? I know I get one thru Tannenbaum and other sources,just thought I'd save a few dollars if I can copy something for you that you need,too.I'd really like to give this radio the tuneup it deserves.

Please respond by email,if possible,as I cant always get to this NG.
best,
Mike Zuccaro

Source record: 75706

I have the following used tested (I use a B&K 747B) sweep tubes on hand, all have clean pins and good to excellent getters. They need a good home:

(4) 6JB6 Sylvania, 3 test new, one tests good, $20.00 for all
(1) 6JB6 (probably Japanese??), test new, $4.00
(1) 6LQ6 RCA, tests good $8.00
(2) 6JE6, one GE, one Emerson labeled Sylvania, both test new $20.00 for both
(1) 6LQ6 RCA, tests new $12.00
(1) 6JS6A RCA, tests (and might be) new $12.00
(1) 6JS6C (Silvertone??) tests good $11.00

Take 'em all for $85.00 and I'll pay shipping in the USA.

Thanks a lot!

Jim McShane

Yes, like the radio (S-W 801A) I just finished repairing. Seller:"It lights up and hums softly but won't receive anything". True. 10 hours of trouble shooting, disassembly, remanufacture of 15 components (trimmer parts, flat wire wound resistors and coils), and now it works like new. Was it worth it? That is a personal call. At least the power transformer was not fried.

I guess I wasn't clear, the caveat emptor aside, would the fact that he had heated the thing up instead of not plugging it in at all make a difference?

Given a boatanchor that had not been heated up in a long time, "plugging it in and turning it on to see what buzzed" is the last thing I'd do.

Do you agree?

Source record: 75787

Hello, I have three of these I've accumulated over the years.. you can probably make at least one working one out of all three, they are fairly intact, one missing relay, one has non-original meter, etc... although no tubes

They all took four 8950's each, so they probably packed a whallop when working.

I was going to become the only Ham in NJ with a mobile tube rig on 10 meters, but now I don't have the time to study for a license, so i'm selling off my stuff..

Price for All three is 95.00, * AS-IS *, I assume no responsibility for what you do with them.. INCLUDES postage from N.J.

Respond privately if interested.

Hi Lane:
SX-117 is a triple conversion superhet. 13 tubes plus semiconductors
made between 1962 & 1965. This rec. is amateur band only. used price is
between 100 to 200. It was made to match the HT-44 transmitter. Sold new for
about 390.

Hello,

I don't think that's a VFO at all.

What you have there is a tunable converter for the 20, 15 and 10 meter bands.
It was meant to be used ahead of a receiver that lacked performance on those
bands. I don't have any other information about it, except that "LF" means "low
frequency" - in other words, bypassing the converter.

Tunable converters of this type were not very popular, because a better
solution to the problem of a receiver that worked well on the lower bands but
wasn't so hot on the higher ones was the crystal controlled converter.

In article <383885C5.80CE6984@JnUaNcK.net>, aardvark <aardvarkiq@JnUaNcK.net> writes:

>Did Johnson produce a matching receiver?

Nope. In fact, Johnson never made any ham receivers. Their main interest in ham gear was CW/AM transmitters, and the famous Matchboxes. The only SSB rigs they made were the Pacemaker exciter and the Invader/Invader 2000 transmitter.

However, in the early sixties they developed an advanced sideband transceiver called the "Avenger". It was all solid state except the final ad driver, had dual VFOs, and was a pretty good performer. But it would have cost more than $2000 - almost twice the price of a Collins KWM-2! A few prototypes were built, and some still survive. Electric Radio magazine did a great article on the Avenger several years ago.

Until the '60s, it was rare to find "matching" receiver-transmitter pairs. Most ham gear manufacturers were either predominantly transmitter or receiver builders. Hallicrafters, Hammarlund and National made mostly receivers, while Johnson, Heathkit, WRL and Eico made mostly transmitters.

Collins led the way in the late '40s by making the 75A series of receivers and 32V series of transmitters. Heath's Mohawk/Apache pair (in the '50s) were also early examples. Both Morrow and Gonset made matching transmitters and receivers in that era, too. But the concept did not really catch on until the sixties, when SSB transceivers became the rage.

Source record: 75659

Having worked in a metrology lab, I can only tell you that we did replace the pointer by cutting off the original, leaving 1/4" or more at the base. Then we soldered the replacement right to this base.

When it was not bent/broken and only needed paint-1) carefully remove the meter cover. 2)Slip a piece of paper over the dial face, under the pointer. 3) Using a fine model paint brush, simply draw the paint over the pointer along the length, from base to the top.
Treat the pointer and movement like a fine piece of jewelry...the pointers are easy to bend. If you do bend it, simply grasp the pointer at the base with the thumb and finger and carefully draw toward the top...like straightening a wire. The movement is probably a pivot and jewel type- easy to dislodge. A tautband type is easy to break. Anyway, if you are careful, it is a simple task. If you cannot find the right shade of paint, try using finger nail polish. There are so many shades of red produced, you will find the one that suites you and you can use the enclosed brush of course.

6930. 8950 Substitutes - I'm Confused!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-25 00:00:00 UTC
From: DavidC <eDoc@netzero.net>
Message-ID: <s3qok3l7rrp13@freenews.remarq.com>
Source record: 75664
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.cb

I recently asked about substitutes for the incredibly costly
8950 tube. I found a discussion on DejaNews about this and
there was a suggestion that 6KG6A's are excellent.

I looked closely at the facts and there seem to be several
significant differences between the 8950 and all of the other
suggested substitutes. I don't understand how a 6KD6 or
6KG6 could be "forced into" a 8950 tube socket.

The 6KG6 is a Novar and I suppose the 6KD6 could fit in the
6KG6 socket but I don't think the 8950 is even close.

I think maybe folks meant that after the amp was modified from an
8950 to a 6KG6 one could substitute a 6KD6 for the 6KG6.

Can someone clarify please?

- Thanks again & Happy Thanksgiving to all! DavidC K1YP

Hi Fellas;
I have for SALE:
Mint IC-725(no options) all band ham band es SW receiver, manual, mike. Comes with IC-55 power supply. Both in original cartons and Mint.
A great 2nd radio or a first for a newcomer. The guy on the other end won't know the difference between this and a $2000 rig.
Have in time for the holidays.
Cost is $500 + ups.
Thanks es 73....Rich WA2RQY (1961)

You're guess sounds right, especially when you realize that the company
is RME. I missed that at first reading, but your comment about it
being a converter made me look a second time. I remember looking up
some piece of RME equipment for someone once, and being surprised
that RME actually stood for something, ie Radio Manufacturing Eng.

I can't quite place an HF converter from them, and don't feel up to looking through old magazines at the moment. However, the "HF 10-20" kind of fits with the designation of one of their 3 band VHF converters, the "VHF 152".

A guess would be that the "LF" adjustment is for a tuned circuit at the output, which of course resonates on the output frequency.

Who knows what the IF output frequency is, but I'd guess relatively low. The whole point of the converter would be to extend a receiver with limited coverage, or at least didn't really work well on the upper bands. And it isn't necessarily in a ham band, since most receivers back then were general coverage.

I forget who Hazeltine was, or maybe I never actually knew. It obviously holds the patent for some or all of the circuit. Perhaps a free-standing converter? RCA held a lot of the patents back then, and you'd always see patent messages. I've come across Hazeltine in the same way.

6944. FS: Collins S Line with 30L-1

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-25 00:00:00 UTC
From: w8mw@aol.com
Message-ID: <19991125171345.12130.00000312@ng-xa1.aol.com>
Source record: 75678

FS: Collins S Line with 30L-1 Amplifier

Famous, later model Collins S Line with 30L-1 Amplifier for sale. Includes 75S3B Receiver, 32S3 Transmitter, 516F-2 AC Power Supply, 312B-4 Station Console, 30L-1 Linear Amplifier. All equipment is working and on the air.

75S3B Receiver: Winged emblem, rare 500 cycle cw filter, original manual, sn 15621. Condition is good to very good. Front panel is beautiful with hard to see paint wear left of main tuning control, cabinet has minor scratches. Has worn but functional AC line cord. Slow agc was not functioning, made temporary fix by tacking a capacitor to the agc switch. Small paint bubbles inside S meter.

32S3 Transmitter: Winged emblem, original manual, sn 13899. Condition is good to very good. Front panel is beautiful, cabinet has minor scratches. Has what appears to be factory mod (AM S3-1) that enables AM transmit with a slide switch accessible under the lid

516F-2 Power Supply: Round emblem, original manual, no modifications, sn 62951. Condition is good. Front looks great, some scratches on sides and top.

312B-4 Station Console: Winged emblem, original manual, sn 55886. Condition is very good to excellent. Have never used the phone patch.

All of the above equipment was in posession of original owner until 1997 when it was used as a trade-in at Universal Radio in Columbus, Ohio. Prior to trade-in, periodic maintenance had been done professionally.

30L-1 Linear Amplifier: Winged emblem, bound copy of manual, customized Samsonite luggage carrying case. Sn appears to be 22195. Condition is good. Front panel very nice and clean. Trim ring and cabinet have scratches, may have been repainted poorly. Includes matched set of four Cetron 811A tubes purchased this year from Surplus Sales and still in boxes.

I have the equipment setting side by side and the appearance is dramatic. Nearly six feet of Collins. Some of the units come with original shipping containers from Cedar Rapids, complete with wooden frames. Also includes various cables with rca connectors, type n rf coax connectors, etc.

Terms: This will be sold as a package only. Prefer local buyer (Cleveland, Ohio area) who can personally examine the legendary looks and fine operating condition of this classic Collins radio station. In the event shipping is required, professional packaging and shipping will be arranged at purchaser's cost. Purchase price not including shipping $2575 money order or bank check.

It's going to be a merry Christmas in somebody's shack! 73, Mike W8MW

Hello,
Jim, maybe you can help me, and I could give a vintage receiver a good and loving home. I am a radio technician, and am also licensed as N3KEX. I don't care to operate much, but do enjoy swl'ing. My career in electronics has been 20 plus years, and recently I fell in love with the older vintage receivers. While the radio sounds neat, I have no idea what it will and won't do. I own a Hallicrafters SX 130, works great, plan to recap this winter. I'd love to own a clean Hammarlund 170, or a older National. The more knobs and buttons the merrier!!!! I gather you are faced with thinning out your collection. If so, I would be willing to work a deal if you have something that grabs my attention. My requirements are that it be a general coverage receiver, with a somewhat stable vfo. A manual would be nice, but I can always find a copy somewhere. Besides a R390, I'm not sure of what else the Military may have used.
Thank you for your time,
Sincerely,
Ed Hutton

6954. Re: Looking for capacitor (3.5 mfd @ 330vac)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-25 00:00:00 UTC
From: Crazy George <munsch@attglobal.net>
Message-ID: <383e0f9a_1@news1.prserv.net>
Source record: 75688

Go to a motor supply or air conditioning supply place. Grainger, if you know somebody with an account, or look in the yellow pages. That is a motor run capacitor, and is sized to resonate with a ferroresonant transformer. You may have to buy several and measure on a bridge to get the exact value. They are relatively cheap, a couple of bucks each, max.

6965. Looking for capacitor (3.5 mfd @ 330vac)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-25 00:00:00 UTC
From: dchopper@mindspring.com
Message-ID: <383ca463.6819507@news.mindspring.com>
Source record: 75740

I'm looking for a source for this capacitor that is used in an old VHF power amplifier. It is used in conjunction with a power transformer for a regulated a.c. source. The parts list states the value as 3.5 mfd, +/- 6%, so the value must be fairly critical.

73 and thanks for any info.

David - WD4JKH

6966. Re: HFradio.org and HF Logger (Palm Pilot)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-25 00:00:00 UTC
From: Reg Edwards <G4fgq.Regp@btinternet.com>
Message-ID: <81i8ga$6uu$1@neptunium.btinternet.com>
Source record: 75741
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

I am not familiar with computer-aided station log-keeping.

In the UK it is no longer necessary to maintain a log while on the move. It seems reasonable to make some comments in a log book at the end of a journey but that depends on how good is one's memory. Mine is rapidly becoming tattered.

So I am curious to know whether USA licensing conditions demand mainenance of base station log books, also details of records of QSO's while on the move. Forget about requirements for contest logs.

I have a Drake C-4 console in good condition. The wattmeter, ID timer and the clock work fine. I have the remote antenna switch which is in fine condition. The remote power switch is homebrew. Its about the same size as original with the 120VAC and 220VAC outlets and power relay. Nicely done. All plugs are included. As far as I know everything works fine. The cabinet is in good condition with some minor scratches.

I am looking for a Collins 32S-? and power supply in trade +/- $.

>Typically, the rig comes from the factory with a set of 2.4khz filters in
>it.

They are 2.7 KHz filters, a crystal on 8.8MHz and a ceramic one at 455KHz.
They are decent but neither is top, and particularly the 455 KHz filter.
Several hams replaced the 455 KHz filter with a crystal 2.4 KHz filter,
which has excellent slopes.

An impressive quad! Prop pitch motors come in small, medium, and large sizes with the large being about 12 inches or so across. Sizing will be a factor when mounting on/in a tower.

Jack

In case you missed it>

FOR IMMEDIATE RELEASE

The Federal Government has reversed its' policy of destroying some of the surplus Collins Radio communications equipment in their inventories..

According to a letter dated October 6th 1999 sent to Michael Crestohl, W1RC, Department of Defense (DoD) officials have recently determined that some pieces of the Collins Radio equipment used by the military and government no longer require "demilitarization".

The letter was from the Defense Reutilization and Marketing Service (DRMS) which is a division of the DoD Defense Logistics Agency (DLA). It was signed by Mark D Vincent, Leader of the DEMIL Business Unit. The DRMS is responsible for disposing of excess and unneeded government property.

The letter continued to state that the DEMIL Coding has been modified in the DRMS mechanized system that their field offices (DRMOs) use for processing property to reflect the no-DEMIL requirement for the FRC-93. The FRC-93 is the military nomenclature that describes the complete Collins Radio portable HF communication station consisting of the KWM-2A, 30L-1, 312B-4/5, 516F-2, PM2, CC-2/3 Carrying cases, 637T-2 transportable antenna and other related equipment. This equipment was all originally sold on the open market to radio amateurs by authorized Collins Radio dealers from the 1950s through to the early 1980s.

In addition to the FRC-93, the DRMS letter also stated that the DEMIL Coding for the Collins-designed R-390, R-390A, R-725 and R-392 has also been changed to reflect their non-DEMIL status. However, the DoD Item Manager has advised the DRMS that some of the components of the

radio may
be radioactive and must be removed. This refers to the meters.

The letter was sent in response to an inquiry made by Michael Crestohl, an
amateur radio operator whose call sign is W1RC. W1RC is the Editor of THE
SIGNAL which is the quarterly journal of the Collins Collectors Association. This group consisting of about 700 members is dedicated to
the preservation, restoration and documentation of communications equipment manufactured by the Collins Radio Company of Cedar Rapids Iowa
(now Rockwell Collins).

W1RC was angered when he saw several KWM-2As, 30L-1s and 312B-4s that had
been thusly "demilitarized" at a Hamfest flea market in Rochester New York
last June. In an Editorial in THE SIGNAL he wondered why these items were
being routinely destroyed when he knew of no possible reason for this
action. He then contacted the DRMS' Public Affairs Office to try to find
out why.

"I am absolutely amazed that they actually changed the DEMIL Codes", stated
W1RC. "Of course, I am delighted. We are all very fortunate that the two
people at the DRMS I was dealing with were sympathetic to the situation and
were able to research the items listed in my inquiry to a happy conclusion."

"I am pleased that the lines of communications are now open to the appropriate authorities at the DRMS," commented W1RC. "However, the work
is only beginning and there is much to do. I have set up a special DEMIL
TASK FORCE to research the National Stock Numbers (NSN) on equipment that
has historical significance which is the number used by the DoD and the
DRMS to track all items. Then we can submit these NSNs to them for reconsideration and hopefully positive action."

"We are actively looking for knowledgeable participants for the DEMIL
Special Task Force. A special e-mail address (NO-DEMIL@hotmail.com) has

been set up as a point of contact."

The news was originally announced to the public on the inaugural program of
THE REAL RADIO SHOW on WBCQ - The Planet 7.415 Mcs on Saturday October 16th
1999. This weekly program (Saturday 2330 - 0000Z) is hosted by Michael
"Mister Mike" Crestohl, W1RC and Timothy "Timtron" Smith, WA1HnLR and
features news and items of interest to the vintage communications radio
community.

Source record: 75497

Hi, I've got a great pair of NOS Sylvania 812A, ceramic supports, test very strong and close for gM on TV-7 D/U, unused in original boxes.

Price is 70.00 for them, plus I will throw in free priority mail, anywhere nation-wide USA. International, add 6.00

Please respond privately if interested.

Also have oodles of other tubes, all types always on hand.

Not working off a list right now, but send any requests, and i'll get right back to you with availability and price.

Thanks! Have a great holiday season !...

Regards,
Joe Pratt, Tubecntral@aol.com

Hi

Looking for one complete BC-610 that can be picked up in the NE area, or I can arrange to have one put in a crate and picked up by truck. Figure I'll start looking for a nice one now. Any leads on a local one would be appreciated.

Also looking for a Lafayette HA1200 2M AM rig.

thanks

In good working condition. To see a picture, go to:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=190765056
I bought it to get the speaker. Radio works, is in good to very good
condition. I would not call it excellent. One knob missing as in photo,
some minor corrosion on the chassis and power transformer. Front panel
is excellent. All original, no mods, no repainting. $225 plus shipping.
regards,
Chuck...

From: Mark Bell <bellfamily@supernet.com>
Message-ID: <3840195f@news.desupernet.net>
Source record: 75510

This would be much better than dipping the needle, which wold provide too thick a coat of paint. Another method would be to thin down the paint and use an airbrush. Go to your local hobby shop and find the name of the local IPMS (International Plastic Modelers Society) chapter in your area. You're almost guaranteed to find several folks with an airbrush that are used to painting small objects like your needle.

Source record: 75526
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

An excellent Drake 2-A rcvr with 2-AC xtyl cal. just completely aligned inside and out. Works better than new EXCEPT for the mute circuit which is not operational. I have been using this rcvr alongside my TS-930 and have been manually turning down the RF Gain when I xmit on the 930 (poor man's mute).

The alignment was done using all HP test equipment. Cosmetics are an 8 to 8.5/10. Every bit as sensitive as my Ts-930. original manual. If you want a very operational 2-A then look no further.

$190 shipped lower 48.

Have no fear
I reported this queer

I get many spams a month, and I report them right away.

Hey this radio is not rare this radio is on ebay all the time and they sell for about 500.00 . I know I have one and got one from ebay and paid just that much for it and I was happy to get it . So go for it guys this is a good radio ,not as good as an R-390a but will beat it at SSB reception.

Nc183d wrote:

7053. Re: Wanted: TV-7A/U Miltary Tube Tester

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-27 00:00:00 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <_uI%3.2377$PH5.34855@dfiatx1-snr1.gtei.net>
Source record: 75635

THE TV-7 series are some of the BEST, capable of testing most all
receiving and MANY transmitting tubes, such as 811-A's, 572-B's, 807,
1625, 829B's, etc. With individual settings for EACH tube element,
only the required setting is needed to test just about ANY tube,
including many miniature and sub-miniature types.

<snip>

I don't see why you'd bother to "convert" it. Why not use it as intended, with its normal rear panel connector and 714E-* controller. Much less work, much more likely to happen. Additionally, to maintain a 618T you really need a 678Y-1 Maint Kit, and ideally a 678P-1 Test Harness. I've been operating a 618T, stock, no mods, built all the wiring "from scratch" for the past 10 years. It ain't rocket science!

73,

John Mackesy VK3XAO

First of all I beg your pardon if cross-posting is frowned upon.
Estate has a several hundred (NOS) tubes to sell as lot, + WW2 (or
prior?) era military radio, + other vintage electronic test
equipment, Radiola and 45 RPMs. Seattle (Tacoma) area.

Send email if interested (read signature @ bottom to reply). Evening
or Staurday viewing, by appointment.

The 8950 is a 12 volt version of the 6KD6, according to the RCA tube manual. It stated, Other than the filament rating, the internal structure is identical. I sold a lot of 6KD6's for conversions at hamfests, and had hams bugging me for more, for several years.

I'm thinning out the shack to make room for more stuff. For more
information and JPGs of any of the equipment please email me direct.
Two Jennings CSVF Blue Vac Caps 12-500pf 7.5KV with machine mounts.
These are the hi-end commercial version $400 each
Dual fil transformer for the 8877s $120
Plate transformer Hypersil for the two 8877s $300
Kenwood 7950 2m 50W Mobile $130
Galaxy3 HF Tribander 150W with PS/Speaker and mic. $150
Hallicrafters SX-110 receiver, beautiful, $195
Hallicrafters SX-110 receiver needs paint and 2 knobs $95
Johnson Viking Phone patch $30
8122 tubes like new $100 each
Shure Model M-68 5 ch. mic mixer $50
Yaesu FT-726R V/UHF All mode with 2 and 440 modules Tribander $560
Collins 75A4 Receiver 3.1KHz 4:1 tuning SN 1330 CCA VG $875
4cx250Bs Good Pulls $30
D-104 with both HEIL elements HC4 and HC5 $90
MFJ Model 2048 CW Sending machine for CW contesters. $40
Johnson Viking Desktop Kilowatt RF Deck complete less tubes. $550
810s transmitter tubes good pulls $40 each
AEA HF Analyst, like new displays graph of your antenna system $325
Bird RF Power Analyst model 4381 $390

Rare on ebay means, "I haven't seen one of these for sale at K-Mart in
at least two weeks".

Source record: 75542

Richard,

Will send you info on controller. I use a 714E-3. The system is absolutely "stock", patterned on aircraft installation, using all std connectors. Components of the system are:

TXCVR 618T-2 (& -3)
Mounting 390J-1
Controller 714E-3
ATU 180L-3A
Small junction box - wiring is "straight through" wherever possible.

!15V 400 Hz AC is generated by a rotary inverter (27.5V DC input), DC input to 618T by a Racal 27.5V 10A DC PSU (modified - cooling fan added)

Test gear: Maint Kit 678Y-1, Test Harness 678P-1, Test Set 678Z-1.

You need to be keen!

Rgds,

John Mackesy

7074. Webpage updated, nice pictures and info !

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-28 00:00:00 UTC
From: kurt.brandstetter@chello.at
Message-ID: <MPG.12ab14cb37d49c50989684@news.chello.at>
Source record: 75543

Hello from Vienna !

I have finished my webpages at http://www.swl.net/oe1002419
with a lot of QSL pictures.

1 QSL card from each of my 335 confirmed DXCC countries.
Also pictures from old broadcast QSL's (1963/64), time and
utility stations and a lot of QSL's from Marconi Memorial
stations.

I have also included a QSL info search page (under LookUps).
This page is downloadable as zip file for use on your computer and is a
result from looking for searches for Pathfinder. Also a downloadable
register of all OE callsigns in PDF format. I have running a lot
of databases, if you need some info, please email me !

Last not least a lot of pictures from my boatanchors (some with
downloadable schematics). Collins, Drake, Hammarlund, Hallicrafters,
Plessey, Eddystone, Kenwood.

Please visit this page and vote for it if you like.

Hi Mike

What are you talking about. Do you mean the connector on the back side of the 1242 or what ?

If you have the most often problem of this DMM (display numbers are running upwards), you only need to bend the golden springs of the buttons V, mA a little bit.

Christoph

7076. Info on Morrow CM-1

7077. Mil Radio Manuals for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-28 00:00:00 UTC
From: "David B. Rogers" <dr7zyq@nidlink.com>
Message-ID: <384101EE.2B7B@nidlink.com>
Source record: 75546

I have the following original manuals available for sale. Priority mail shipping for each manual is $5.50. This is so because most of these are large 8 1/2" x 11" manuals and most are at least 1/2" thick; the rate is based upon the fixed priority mail rate of $3.85 plus the cost of a padded envelope. Risk of loss is transferred upon mailing unless insurance is requested at actual USPS cost ($.85 up to $50.00, rate table after that). These shipping costs pertain only to shipments within the US. Shipments outside the US will be actual mailing costs.

Please note that these are single copies from my collection - I am not a dealer and do not have multiple copies.

Thanks,

David, WA7ZYQ
208-245-2070

1. Operator's Manual Radio Receiver R-390/URR, TM 11-5820-357-10, 12/60, no covers, exc. Cond. $10.00

2. Field and Depot Maintenance Manual Radio Receiver R-390-A/URR, Air Force TO 31R1-2URR-452 (Army TM 11-5820-358-35), 12/61 w/changes through #12 dated 7/75, no covers, exc. Cond. (N.B.: the cover notes "BASIC AND ALL CHANGES HAVE BEEN MERGED TO MAKE THIS A COMPLETE PUBLICATION) $30.00

3. Command Sets by CQ Magazine, complete, cover loose but complete and reglueable, 136 pages, last 4 pages have a tear $12.50

In additionto the Navy issue radios, Beckman Instruments sold some 51J series radios as its own with a greyish green faceplate. I don't think there were any electrical changes.

In 1956 my first job at Collins was supervising 50 radios with Yugoslav
front panels.
Damn near cost as much as the radio to have them made special!
But was our governmant's money (Your father'ws)
The special handling for the Navy was probably just as expensive!

This radio was unique in that it used the same tube throughout the design. If there are any in the unit, just get a few more of the same. Believe it was a dual unit (triode/pentode) 6AW8 keeps popping up in my feeble brain, but use one of the others as a reference and you should be ok.

Source record: 75568

Slide switch (SW-1) in back adjusts the front panel meter sensitivity (relative output). Tune for max smoke -> Use switch if meter reads off scale. (Also check SWR/Antenna if needle doesn't go down)

ACC socket is as follows:

PIN #

1 Not used
2 6.3 Vac (use 6 ground for return)
3 + 410 VDC
4 wired to 5 - can open and use for 117 relay
5 from 4 or relay coil if used
6 Ground
7 117 vac coil for antenna relay -
8 117 vac coil - works when in "AM" or "CW"

Fire that puppy up on CW! It produces a very nice FB T9 Sig!

CU on 40M BA CW

Kinda makes me want to fire up one of my T-60s. I got two of them around here somewhere and a Heathkit MR-1 receiver. I had a T-60 and a MR-1 as my novice station back in 1976. I think the most exciting contacts I ever made in amateur radio was with that setup.

Well why the heck not? I gave up on all the ss jap stuff. Sold it all 3 years ago.

Got my old novice rig back, a handful of xtals and an old J-37 key.

Funny - who woulda thought you can have so much fun with some tubes and 30 watts?...and I'm not alone, work alot of guys using great sounding BA's on CW, AM and SSB.

Been a ham fer 27 years and NOTHING has ever been as much fun as tube equipment.

I expect more new hams will be discovering this little secret...

7121. Re: Collins 51S-1 value??

Newsgroup: rec.radio.amateur.boatanchors

Source record: 75590

For what it's worth, the Osterman shortwave collector book prices that model in the range $1100-$2100 (a pretty wide spread!).

"Book" values for radios are not hard-and-fast like car values. Your mileage can vary a lot depending on where you live, who are dealing with, etc., etc., etc. The most important factor is condition, of course.

Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.swap

I have a military tabletop cabinet that knocks down flat. Consists of sides, top, and back. Used to use for an R-390A. In good shape...gray paint with small amounts of rust here and there. I was going to powdercoat it, but have too many projects :). First US$45 plus shipping takes it...reply by email, please.

Walt

Source record: 75449

I just picked up an old looking SWL receiver called a Pan American Tropical. I am looking for any info on the background of this boatanchor. What year were they made? Who made them? Why is it in a bullet proof case?

Are ther lots of these around?

7129. NOS RCA JAN 6V6 matched quads.

Hi! I do have for sale a heatkit station SB-401 & SB-303.
The transmitter SB-401 needs repairs,I turned it on a few
days ago and I noticed smoke coming out from under the chassie
since then,everything comes but does not transmit,I did not try
to fix because my electronic skills are really poor.
The receiver SB-303 works adn look perfect.Bouth them last
year and paid $425.00 for both,will sell them for $250.00 obo
plus shipping.If interested let me know...Thanks.......73

http://www.laughingpoliceman.com The LPWS working for the advancement of amateur radio.

Greetings fellow radio enthusiasts

The Laughing Policeman Wireless Society, The premier club for wireless telephony and telegraphy abusers in the UK and now the world.

Our 2 download sites are maintained independently so no copyright material is kept on the LPWS web server. The 2 URLs are:-
http://members.xoom.com/BAJONES

http://members.xoom.com/g8arsehole

Both sites are identical, and either can be used to download the complete Radio Ham featuring Tony Hancock, in a Zip file of a mono MP3 file, but we suggest you buy the CD with The Blood Donor on it as well!

We recently added the TV news report of the Aylesbury repeater bomb, again in MP3 for ease of download.

Go direct to our download page here:-
http://www.laughingpoliceman.com/free_downloads.htm

and don't forget the free LPWS email that we now operate entirely for and on behalf of our amateur radio friends and anyone else who wants to sign up. Don't worry, this is out-sourced so you can be sure it's 100% confidential.

Please report any errors and omissions to me and I will get them rectified without delay, and don't forget to email me with any further additions etc. complete anonymity if required. Thanks to all for the email, everything gets answered in rotation, I will get back to you in a few days. Our email is now directed straight to Kidderminster HQ from our LPWS server, so please contact the team by using g8aso@laughingpoliceman.com

LPWS Publicity Officer G8ASO http://www.laughingpoliceman.com

LPWS is a non-profit organisation for the furtherance of amateur radio.

7135. Help ID military metal case

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-29 00:00:00 UTC
From: marty@cssun.mathcs.emory.edu
Message-ID: <81tp8knco1@finch.mathcs.emory.edu>
Source record: 75456

I just turned up a elaborate military OD transciever case. The finish
is matte OD rather than semi gloss & hence may be Enlish

It's about 13" x 20" x 9" with a tackle-box-type tray above smaller of 2
compartments

Big sign inside says:

OPERATING INSTRUCTIONS

1. Turn STANDBY SWITCH to HIGH and MAIN SWITCH to CW

2. Set TUNING DIAL for desired frequency using the calibration
chart on the cover. For example if setting is 1355, counter
reads 135, dial reads 55.

3. Set ANTENNA COUPLING dial to 50 and hold telegraph
key closed.

4. Set ANTENNA TUNING for maximum ANTENNA CURRENT
reading. Adjust ANTENNA COUPLING for desired output.

Voice operation turn MAIN SWITCH to VOICE and press micro-
phone button.

netting with control station

1. With STANDBY SWITCH in LOW position turn the MAIN SWITCH
to CW

2. Turn receiver tuning dial to zero beat with control STATION.
Read approximate frequency from dial. Read corresponding setting
on calibration chart and set TRANSMITTER TUNING dial.

3. Pull out CRYSTAL SWITCH to detent. Adjust TRANSMITTER
TUNING dial until a zero beat note is again heard.

4. Push CRYSTAL SWITCH in

5. Same as "4" above

re-calibration of transmitter.

1. Select a crystal frequency near the desired frequency from
calibration chart.

2. Set TUNING dial to the corresponding reading.

3. Pull out CRYSTAL SWITCH

4. Turn MAIN SWITCH do CW and adjust receiver tuining for zero
beat note with crystal.

5. Turn STANDBY SWITCH to low

6. Turn CALIBRATION CONTROL with a screwdriver until
second zero beat note is heard.

7. push CRYSTAL switch in

THANKS READERS.

THE THING'S IDENTITY CONFOUNDS ME!

Thanks,

Marty

Hi,

Looking for the operator's and service manuals for this hybrid rig from the early '80's.

Photocopies would be OK.

What's really needed for my radio is the power xformer.

Any help appreciated.

Please email cost for any or all of above.

FS- Last of the 101 series. The 101ZD has a digital readout, 6146B finals and WARC bands.
Cosmetically, it has a few blems on the outer case, but the front panel is clean and nice looking. Ditto inside.
Electronically, it has a very hot RX, full output on all bands -100+ on peaks. The VFO occaisonly drifts, but is quite usable. This is the only possible problem I'm aware of.
It's used almost daily. No smoke. With D-104 mike, manual, $250 plus shipping Tnx, Ed K4GJ

Source record: 75472

I would like to know if there are any RF2600 owners out there interested in good copies of the following information included with the RF2600. There are 3 publications that were put out by Panasonic: 1) The operating instructions (if you don't know how to work the thing, I guess) 2) The Service Manual (14 pages of Service stuff including circuit board diagrams and parts listings) 3) Technical Information (this is a service publication dealing solely with the digital readout portion of the unit).
I have talked my technical wizard out of the originals long enough to make copies and need to know if I am wasting my time doing it.
Please respond directly to: nc183d@aol.com
rgds,
Mark S

7157. For Sale - HF rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-29 00:00:00 UTC
From: tech <tech@dp.net>
Message-ID: <Pine.BSI.4.05L.9911292046520.6926-100000@home.dp.net>
Source record: 75478

For Sale:

OWNER SAYS SELL! He got a new rig. He doesn't want to invest any money in to this radio to revitalize it.

1 - SWAN 260 Cygnet. Case is about a 9.0 - 9.5 on looks. Insides are in decent shape. There is one small spot in lower right corner of paint chipped. Fairly SMALL. Otherwise, face is in decent shape as is the rest of it. Considering the age, it isn't "beat up" Unit has had a lot of the factory recommended mods done to it by the factory and one or two done by some one else. ALL of which the specs (schematics) are given for.

The unit is NOT dead by any means but does need some attention.
Low RF output (probably final and driver). The driver did test bad of all the tubes when tested. All tubes did test ok or within reason on two separate testers. On both, the driver showed problems. It probably wouldn't hurt to change the final and give it a good tune up. The AC cord with mating plug and a mic also accompany the unit, as well as the manual (copy).

If interested, e-mail me directly with your best offer "including" shipping. He isn't looking to get rich off the radio but wants a reasonable offer to help compensate too, for my commission.

ONLY a U.S.P.S. Money Order will be accepted for payment. Shipment will be immediate. If you are hesitant, ask around the radio news groups. I've dealt with many.

7161. Hammarlund HQ-160 schematic problems

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-29 00:00:00 UTC
From: John Morris <moe@email.msn.com>
Message-ID: <OJ5vi2uO$GA.58@cpmsnbbsa05>
Source record: 75482

I recently obtained an HQ-160 receiver. While trying to trace down the "dead" signal, I have discovered several discrepancies between the schematic and actual layout.
Most important is that most of the IF Xfrms have a fifth terminal that would seem to be a center tap of some kind that HV from the pwr supply goes to. The schematic I have "version #2" only shows a four terminal xfrm. I've also gotten the "version #3" schematic and it shows only four terminals as well. Does anyone have access to another either earlier or later version schematic for the "160" that might show these five terminal IF xfrms? (these are NOT ground)
Since a test signal stops here, I think this is the problem. Does anyone have access to one of these 455kc xfrms. I've got several four tab...but no five tab.

Thanks

John

Hello,

I recently added a PREFIX look-up form on the QSL page. If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

You are invited to http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

73!

Hello Fellow AM'rs
As some of you know I am refinishing Valiant-1 panels & cabinets now. The first ones are turning out very nice! I am pleased with the regenerated art work / screen.
Some of you are wanting to paint ur own cabinel, hovever, while I do the panel, bezel, & crystal knob. So here is the deal. I will be happy to do that for $210. + shipping. Its easier for me & saves you money. GOT ANY QUESTIONS?
ASK ME!! The paint system I'm using is the same as comes on new cars!
I will have some pics I can .jpg to you of the Valiant soon.
I have been doing this same arrangement for the Ranger-1 panel only set @ $195. + shipping. For some .jpg's of the Ranger check my home page.

7180. metal Vs. glass tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-11-30 00:00:00 UTC
From: emanuele_girlando@my-deja.com
Message-ID: <821ktf$73g$1@nnrp1.deja.com>
Source record: 75408
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Guys,
looking at some hallicrafters sx-28 pictures found around on the web, I discovered that some of the tubes in them are made of metal, while the same tubes in my own rig are made of glass.
The tubes involved are:
V7 6B8 2nd Detector,S-meter driver
V8 6B8 AVC Amplifier
V11 6J5 Beat Frequency Oscillator

Questions are:
- do I have to look for the metal types even if the glass types I have are performing perfectly on a tube tester (the sx-28 is not working yet!)
- if not do I have to set up some kind of shield for them?
- do I have to care about the fact that the tubes I have are G or GT versions of what is really in specs (e.g. 6B8GT instead of 6B8)?
Thanks you to all!
ciao

Instead of playing these BS games, why don't you just come right out and say what you want for the Swan 260? Then we can haggle.

From: W4DAS <dcb@ecqual.net>
Message-ID: <38445216@nntp-out.newsnerds.com>
Source record: 75412

Hello all,
I realize the SB-104 is not strictly a boatanchor but by vintage it almost qualifies. I have found some difficult parts that may keep a few rigs on the air.
1. Beckman SP-352 display tubes. The 2 digit displays used for the frequency display. $22 each - brand new (old stock but unused!)
2. DM8880 display driver chips. $4 each
3. MFC6030 voltage regulator chips. Also used in HP-1144 power supply. $8 each.
4. UA78MGT voltage regulator chips. Also used in late HP-1144 power supplies and HR-1680 receivers. $4 each.

Most can be sent by Priority Mail for $3.20 in the US. Let me know if I can help keep those rigs working.

Source record: 75413

I tried to find these a few yeasr back and found that higher wattage zeners were difficult, if not impossible to find (wholesale houses, etc.). What I did to my '220 and L4-B's was to use a series string of IN4007's (6-7, as I recall) to get the requisite voltage. Works just fine!!

In General a tube of a given type operates the same. The envelope shape and material is not a factor. In general... I would look to other issues besides the tubes (if you know they are good). Later you might want to put original shaped tubes into the reciever for historic interest. Tube shields may enhance certain sensitive circuits, but missing these should not affect getting the unit up and running....PS, I can probably find any of the tubes you want for this...

The tube envelope (glass vs metal) generally makes no difference. If the tube is the correct type and tests good, then use it.

If your SX-28 doesn't work, start by checking the following things:

1. Cracked/broken power cord. Replace. Install a fuse on the power line if the radio doesn't already have one.

2. Dirty/corroded contacts inside controls such as volume, bandswitch, etc. Use spray cleaner such as DeOxit.

3. Leaky/shorted capacitors, both electrolytic (in power supply) and paper. Some restorers will replace all of the electrolytics and paper capacitors before even powering up the set. Ceramic and mica capacitors are much more reliable and generally don't need replacement.

Phil

The Morrow CM-1 is a Conelrad Monitor. Set to a local AM radio station,
it tripped an alarm if the station went off the air indicating that we
were under attack and that all hams were to get off the air. Good piece
of 50's history.

From: Bob <XYZ_p15218@flash.net>
Message-ID: <38431879.E96F41E8@flash.net>
Source record: 75487

For sale: one World Radio Laboratories, Globe Scout 65 AM/CW transmitter
in fair condition with cabinet. I'd give it a 6 out of 10 for cosmetics
though the cabinet is in serious need of paint. The front panel has a
couple of scratches and one "ding" mark. I don't have the book, but
everything else appears to be stock. I tried it with a 3706 kHz crystal
and the transmitter generates about 50 watts. Problems: meter arcs over
when modulation applied and the meter has a dent in it's front bezel
though the glass is intact. I have no desire to bother with shipping
this thing so PICKUP ONLY! Best offer (7 days from now) over $65 takes.

7211. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <822ip9$457$1@news.hawaii.edu>
Source record: 75343
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Hoping to locate someone familiar with the controls on the transmitter section of this model. (Manual is on order). Specifically, What is displayed in the Red window (channel?), what is the "LO-HI" rocker knob for, what is the "scan rate" selection for, and lastly, what are the settings on the "Meter Knob" for (MOD-FWD-REF-MA).
If you also knon a web site for this model, please send the location also.
Thanks to all.

To BUTCH:

IF YOU AREN"T INTERESTED, DON"T REPLY!

DID you never hear of BEST OFFER? Or is that a new concept to you?
THAT allows ANY ONE who may choose to make an offer to reply. It is then
up to ME and the OWNER to settle with the BEST OFFER received. DUH!
We just hoped it would be enough to include shipping and get something
out of the radio if nothing else. DAMNED, how hard is that to comprehend?

The owner has an idea of what he would like but that DOESN"T SAY he can or
will get it. Being I am the one handling it via the internet the buyer has
to deal with me.

Usually I don't have problems with placing ads. I guess I was due for one.
YOU are the one. Go play with your keyboard somewhere else and quit
wasting OUR time. YOURS AND MINE.

Please, DO NOT repond with an offer. I won't accept it. I'll buy it
and junk it before that. I won't deal with you, now or ever. So be
forewarned.

I will not read any further replies from you. So don't bother. My
reputation for dealing with people over here will speak for itself. Anyone
who has can vouch for it. I have numerous satisfied customers. No returns
and NO complaints. Any attempts to defame me will be grounds for legal
action.

Happy Holidays to you too. SHEESH!

Just one quick caveat on this:

I just finished aligning a Sparks-Welllington console that included the FM band. The 10.7 mhz IF/limiter stages were oscillating. The radio calls for GT style tubes, and someone had put in a metal 6SK7 for the last IF prior to the limiters. Pin one was floating on all the sockets, so the metal tube housing was floating. A glass tube fixed it, grounding pin 1 of the stage that had the metal tube fixed it too. I grounded pin 1 on all the IF stages in case someone else replaced glass with metal.

On 455 khz, probably wouldn't know the difference, such as a SX-28.

To all others who may read this thread. I sincerely apologize for this problem that has developed. I tried to advertise something and thought I did a fair job of it, as a BEST OFFER deal. It should not have prompted any problems. If I was a Marketing or Advertising genius, I sure in hell wouldn't be doing this line of work. If I DID not do so properly, I DO apologize.

I do aplogize for this flare up and the one I posted openly in my defense to the protester.

My reputation on here (all radio news groups) speaks for itself and I believe the ad did pretty well for itself. There needn't have been a problem and won't be as far as I am concerned. I have said all I will on this matter publicly.

Happy Holidays to all.

Sorry, but I'm on Butch's side.

Blind "Make Offers" (asking for offers without presenting
a reference value, such as "best offer over $50)
is offensive to many people.
I do not respond to them, unless the item is so
difficult to find that I must. Many folks agree.
More then one radio-interest mailing list
bans "make offers" altogether.

You probably didn't have a good idea
of the value of the unit, so asked for offers in good faith.
All too often, however, some people will use
"make offer" is a pretext for running a sneeky auction.
If I'm going to run auctions (and I do),
I'm going to be forthright about it.

Many people ask the group opinion of value or
check marketing sites for recent prices accepted,
then offer for direct sale,
or ask for offers above a reference value.
Perhaps this could work in the future.

Kind Regards,
Dave Stinson AB5S

I agree completely. This guy is holding an auction on a newsgroup! I wrote to him directly and suggested that he either state a price or put it on eBay. He said he didn't like eBay. As far as I can tell, the only difference between eBay and what this seller is doing is that he doesn't have to pay eBay a small fee and there are no rules to protect the buyer or the seller.

OK, for what its worth... I was even told I should try e-bay. But, I have seen too many complaints so therefore I choose not to. I have used this method before with NO problem.

So, with that said, and talking to the owner, here goes......

How about a ball park figure of about $175 shipped, with all the predescribed items accompanying it?

I DO apologize for this and I NEVER expected such a problem. But, I AM NOT a Marketing genius or Advertising specialist. So, I guess I must ask for a forgiveness of IMPROPER use of net space.

Happy Holidays to all.

There are a few gotchas:

Pin 1 on a metal tube is the metal shield. Some of the glass
tube designs use pin 1 as a tie point, or left floating,
which is very bad if you plug in a metal tube. You could
end up wioth a floating shield, which will tend to pick up
and radiate more crud, or a shield carrying signal or
plate voltages!

If you plug in a glass tube and the design used a metal one,
you have less shielding, so you may
get some oscillation.

In a few tubes (I dimly recall the 6J5 was one of them),
the interelectrode capacitances are waaaaaay different
between the metal and glass versions. This can make
a difference in oscillator tracking if the L.O. or B.F.O. is a 6J5.

7231. Q: Best Hamfests of 1999 ????

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-01 00:00:00 UTC
From: cccacutts@mindspring.com
Message-ID: <8243e7$5cr$1@nntp5.atl.mindspring.net>
Source record: 75363

All,

Okay, this weekend marks the end of the 1999 Hamfest season. My question to all of you is "What hamfest was your favorite and which hamfest was the worst?" Here are my feelings about the hamfests here in the southeast:

Dalton, GA (last weekend in February) - Not that large of a hamfest, but a good one to start off the hamfest season. Was hit hard with heavy rains in 1999.

Charlotte, NC (mid March) - I didn't go to this one but I heard that there was too many non-radio vendors. Plus, no tailgate area.

Kennehoochee (Marietta, GA) (late March) - A mid size hamfest that seems to be growing, so long as the weather cooperates. Great tailgate area.

Birmingham, AL (early May) - I didn't go to this one either but 1999 marked the return of the tailgate area. This hamfest is trying to turn things around.

Anderson, SC (mid May) - Continues to have a good turn out. This was the old Greenville hamfest but it is now in Anderson due to the better location. Always has a great tailgate area. You don't want to miss this one.

Atlanta, GA (early June) - This hamfest has fallen to hit rock bottom in 1998 to an all time low. 1999 marks a turn around for this hamfest by moving to the same location as Kennehoochee and the return of the tailgate area. But this hamfest is no where near where it was in past years. Truly, a sad story.

Gainsville, GA (mid July) - Just as small as always, but it has a tailgate area in a covered parking deck.

Waynesville, NC (late August) - A good hamfest with lots of room for a tailgate area. About average in size.

Shelby, NC (Labor Day Weekend) - About half the size of Dayton without the parking hassles (no buses). Largest tailgate area in the southeast. Hard to see all this hamfest in one day. A must see!!

Lawrenceville, GA (early November) - Largest hamfest in Atlanta and going strong. Great tailgate area. However, weather can be a major factor for this hamfest.

These are some of my opinions of the hamfest in my area. How about some in your area?

Covers 3 Mc to 405 Mc. Comes with cover and partial copy of manual.
Dial off a bit on the high band, never fixed it cause I used counter
to set
frequency.
Has calibrated output, 0.1 uv to 50+ mv, AM/CW/PULSE.
Bought another, newer Sig Gen, so don't need this one.
$125 plus UPS from 02421.

Lets see:

Dayton Hamvention. Great but it is slipping. Fewer sellers and buyers than in years past. I remember not that long ago when you had trouble walking outside for all the people. This is not a problem any longer. Still I wouldn't miss it for anything!

Fort Wayne In. Good selection, larger hamfest but not too large. Good prices. All indoors!

Indianapolis In. Hamfest Lots of stuff, good prices, some indoors.

> Okay, this weekend marks the end of the 1999 Hamfest season. My question
to all
> of you is "What hamfest was your favorite and which hamfest was the
worst?"

Richmond, VA (January): Pain in the ass rules about not getting inside
before 8:30. Not as many vendors this year. OK.

Vienna, VA (Jan or Feb?): New location, rained like hell. A washout
(literally).

Baltimore/Timonium (March) One of the best hamfests on the east coast. Two
days, inside (4 buildings) and huge flea market. The only bad thing about
this hamfest is they are sticklers for not letting buyers in before some
stupid arbitrary time.

York, PA (March) Ok, nothing special. Better than no hamfest at all.
Self-appointed hamcops stop you from going inside to use the head before the
indoor area is open (as if there is anything worth a crap inside anyway)

Hagerstown, MD (april). One of my personal favorites. Smallish but very
friendly, *NO HASSLES* about using the bathroom, getting in early, etc.
The club that runs this hamfest is first-rate, a bit amateurish but that
adds to the charm. Close by parking, you don't have to lug junk a mile to
your car. Also got a ton of great stuff cheap.

Dayton, OH (May) 'nuff said

Man-asses, VA (June) Not too bad, not as big as last year but always good
buys. Another freindly hamfest with no hassles.

Baltimore/Timonium (July) Not nearly as good as the March hamfest. Seems
to be going downhill, it's usually hotter than the hinges of hell at this
one. Still, definitely worthwhile.

Berryville, VA (august). Didn't make it this year. Usually pretty good,
and freindly. A bonus is it's on a nice shady site. Lots of boatanchor
enthusiasts love this one.

Gaithersburg (now Bowie) September . Not as good as the ol' Gaithersburg
fest. Not too bad, though.

Howard County, MD (both May? and Sept?) Always pretty good and friendly. Parking seems to be miles from the flea market area, though. It rained like hell for the fall one.

Westminster, MD (October). Small and *very* freindly. Missed it this year.

The HW-18 will tune up on the 75 meter ham band and its possible to connect a VFO into one of the crystal sockets. You will be able to get about 50 kHz worth of spread before you have to go inside and re-tweak things (for best output, etc.) The HW-18 was designed to work, nominally, from 4-5 MHz, as I recall. The HW-18 was a spin-off from a Heath model that had a VFO and covered the entire 80/75 meter band. I think they (Heath) may have had one for 40 meters, too.

Hi,
They used either 1625 or 807 or 837 tubes grounded grid for final and put out about 400W. Please note that the 807 or 1625's are modified version and original tubes will not work. What they modified was that the beam deflection plate which is normally connected to Cathode is actually tied outside the glass envelope and inside the plastic bottom, tied to one pin. P&H separated this pin and tied the beam deflection plate into the grid, therefore grounding all together for more stable operation. 837's do not require this mod because of being pentode.
It should be quite easy and straight forward for 160 meter add on as there is no input circuit on this amp.
Good lcuk.

> ciao
>

You should have no problems using glass tubes in place of the metal
types. The RF and IF tubes may need shields if they are replaced with
glass types, but the BFO, etc. should not cause problems.

Possibly. However, it does not have a commom tube throughout. It does follow the tube pattern given by Niel in another message. It also has an extra tube socket which could be for a relay. The chassis has marks evident of a removed transformer or choke. It does not have a power cord. I'd love to find a schematic of the darned thing. It would probably go great with my other boat anchors.

Howdy Mark....Just a suggestion....I've seen those rubber bands and it seems that they were just common o-rings such as might be available through a good automotive jobber or hydraulics supplier (often have open stock so you can buy a few etc - very cheap). They are sized by inside diameter AND the diameter of the ring, the latter being coded as typically a #0, #1, #2 etc....seems to me they are either a #1 or #2 thickness but I've never checked the size. I've seen 'em on the SB series but my old SB101 had dial cord setup.

Mark,

Use plumber's O-rings. Any hardware store, Home Depot, Lowe's,
or other home supplier will have them. They cost about $2.00
each and will last forever. I've been using them for years.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

.The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

I am trying to restore a Lafayette KT-320 and in my zeal to clean the
dial glass I managed to clean off the scales - and, yes I know better.
If you have either one of these radios,
and would be willing to sell it, then please contact me. Or, if you
have one, but don't want
to sell it, and would be willing to go to the trouble, then I would
pay you for a contact print
of the dial glass.

You are not to blame- your listing was made in good
faith and with honorable intentions. It's just that
netiquette has evolved away from the concept of
blind-make-offers, so it was valid for discussion.

And if I didn't already have a nice Swan,
I'd counter at $150 ;-).

Kind Regards,
Dave S.

Source record: 75307

Best:
My vote for this and every year I can remember remains
Ft. Tuthill in Flagstaff, Arizona, held the end of July.
The people are nice, the attendance is good,
the swap is brimming with goodies and the location is beautiful.
The weather is wonderfully cool in the morning
and cozy warm in the afternoon.
Even when it rains, it's only a short, refreshing shower.
Bubba gives it four stars. ****

Worst:
Dayton, based on several reports from attendees.
Mostly because of bad organization and nasty, rude people.
There were smaller hamfests that were busts,
but Dayton causes such big expectations that,
when it goes down, it creates a much larger disappointment.
Bubba says miss this one. *

George that is very helpful advice for all of us. My old transmitter came originally with metal and so I began comparing your comments to the schematic and sure enough, the design asks for them. I'm very glad now that I have kept it original.

May I ask an additional question? Consider an AM modulator in which you are looking for low noise and low hum. Given that you have a typical open chasis design, wouldn't metal tubes properly used help in this regard? While glass tubes or tubes without shields have their radiation components, aren't they also susceptible to picking up stray noise or electrical fields or signals which will translate as unwanted components of the audio line? Perhaps I am not asking my question properly, but I think you can understand my concern.

Very best regards,

Doug Hensley

- - - - - - - - - - ORIGINAL MESSAGE - - - - - - - - - -

Date: Wed, 1 Dec 1999 15:08:54 -0600
From: "George R. Gonzalez" <grg@umn.edu>
Subject: metal Vs. glass tubes

There are a few gotchas:

Pin 1 on a metal tube is the metal shield. Some of the glass
tube designs use pin 1 as a tie point, or left floating,
which is very bad if you plug in a metal tube. You could
end up wioth a floating shield, which will tend to pick up
and radiate more crud, or a shield carrying signal or
plate voltages!

If you plug in a glass tube and the design used a metal one,
you have less shielding, so you may
get some oscillation.

In a few tubes (I dimly recall the 6J5 was one of them),
the interelectrode capacitances are waaaaaay different
between the metal and glass versions. This can make
a difference in oscillator tracking if the L.O. or B.F.O. is a 6J5.

I have to agree. I have been to many hamfests in the western states,
but nothing compares with the one in Flagstaff as far as finding
things for sale. Others may outdo it in terms of seminars, etc., but
not if you are looking for something to buy.

Dick Hughes - W6CCD

It certainly won't hurt to use a metal tube for the first and second audio stages.

Most of the common low-power audio tubes are still available reasonably cheap,
so you shouldnt have too mch trouble finding a good metal one.

The only modulator I've looked at had a metal 6F5 for the first stage, then going to a glass 6F6, 2A3's, then TZ-40's.

Personally I like the glass ones better cause you can see them glowing.

Message-ID: <3846FFE0.41CF@snow91hill.com>
Source record: 75320

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the two "91"s to reply or call 334-347-5281.

Hello from the great white North. My favorites:
Dayton--Been there twice, will go back year after year.
Cuyahoga Falls--Blows hot and cold, always an enjoyable time.
Massillon--First experience this year, a really great mix of stuff--mostly radios for a change.
Goodyear (Akron, OH)--Really a great time, venue is outdoors in a private park, even if you don't find what you are looking for, always a good time.
Just my .02 worth. Hope everyone has a great holiday season. de W8IJG Bob.

>I need a couple of good condition National PW drives, as used on the HRO
>series receivers

I am currently reworking an HRO-50T1. Electronically it is doing
well but there are dial problems. The PW dial when installed according to
instructions binds after a few turns or the gears jump out of mesh. Do
you know the maximum run out / play for the tuning shaft bushing ? A trial
PW
dial is on the way so I can determine if the dial or shaft play is the
problem. If the bushing is bad will have to make a new one. Any input
welcome. Thanx!

Source record: 75329

The HA-1 does have self-completing dots and dashes. It is NOT an iambic keyer. There are many problems due to aging of components that can occur in this keyed and it can produce some strange results. I use a dual paddle Brown Bros. lever with the keyer with great success. Before I had all the bugs out of this particular keyer, I thought perhaps I'd lost the ability to send good CW due to age (mine, not the keyer's).

I have two of 'em... they both work great. You need the right paddle.
All electronic keyers greater than 25 or so years old did not use the
iambic, or squeeze keyer type
of operation. Besides bugs, Vibroplex sold two differant types of paddles
for use with electronic keyers.
One is a squeeze type, and the other is not. You want the one that is not. I
think it was nicknamed the 'Vibrokeyer' or
Vibrosender or something like that.
Heathkits old HD10 keyer was the same type, I also have a couple of old
tube-type EICO keyers that are also the
same type.
The hallicrafters is neat because the neon bulb blinks once per did, and
twice per dah. The result is that when you are sending, it just keeps
blinking rhythmically.

I have a new Champion deep cycle RV/marine battery. Something like 160 amp/hours. I would like to know what chargers are available to keep this thing topped off 24 hours a day. I will be using it with my TS-850S and some other 12vdc operated items. I would like to hook up a trickle charger(?) and just have it be the "leave it and forget it" type.

Any suggestions? I'll be going to Wal Mart and Sears on saturday to see what they have but would like some info first.

Thanks and 73s

Lane

Chargers are so simple! Build one yourself. It doesn't take much at all.

I recommend doing a bit of research. Contact the battery manufacturer for recommendations on charging, and build a gadget to do it. Piece of cake.

Too many of us hams have become appliance operators and don't know how to build stuff any more.

Lane:
If you do pick up a automatic charger somewhere to keep it on the
battery all the time just make sure and read the fine print, you need
a charger that shuts down completely. Most of the automotive chargers
that say they drop off the charge rate then go into trickle mode will
boil the fluid out of a lead acid battery. Two ways to keep that from
happening. Either keep the radio on receive 24 hours, this keeps a
float load and that keeps the current out of the battery when it is
charged to 100%. OR you can place a small load across the battery such
as a 14 vdc pilot lamp, or a resister (that will have the same effect
as the radio left on). But if you want to do it right, spend about
double what the auto charger would cost and buy a "smart battery
charger" that monitors voltage, current and is able to calculate
battery temp. You can order a kit for $59.95 plus $6.50 s&h. You can
buy the kit with a nice case from A&A Engineering of Anaheim, CA at
(714)952-2114. By the way, while at Sears buy a plastic marine style
battery box for your battery (about $5). The case is made up so you
can mount the power and charge cables on the battery and run them out
of the case. The case also allows ventelation. The case is resistive
to acid, and it makes for a nice clean instalation. By using the
above information your battery will last five years and not just a
year or two. I ran my station this way for 6 years, and in the event
of a power failure, you have a nice backup power system. My TS430
would run all day on low power off one marine battery.
Good luck, Doug, N7JHS in Idaho.

Hi Lane. I charge my motorcycle and boat battery with my Astron RS 35M.

You can see the current taper as the voltage on the battery rises. I
don't leave
it hooked up all the time because I use the Astron for other things,
but I don't
see why you couldn't leave it that way. I have a 1 amp trickle charger
that I
built from the ARRL Handbook. It's just a small regulated power supply
that
acts the same as my Astron. Just be sure to always have the power
supply
turned on when you connect the battery or the 723 regulator will crash.
You
can also put a big diode between the battery and the Astron to keep the
battery
voltage from coming back in. For some reason the 723 does not like it.
Luckily Astron put it in a socket and Radio Shack has them on the
shelf.

--> I would check stores that cater to the RV or marine market, if you don't find anything at Sears. You can probably find a 'maintenance' trickle charger that'll work, as well as more sophisticated ones that will charge the battery faster. Owners of boats or trailers are often faced with the problem of keeping the battery charged during the winter season. (Letting the battery self-discharge and sit in that condition will ruin it, and may even result in it freezing.)

Someone else mentioned the charger in the ARRL Handbook -- this is a nice and reasonably sophisticated charger. It starts at a higher current and tapers off as the battery comes up to full charge. It works quite well, but if you build one I'd recommend adding a diode to the output and increasing the output voltage by 0.7 volt to compensate. Otherwise the voltage regulator is ruined if a battery is connected with no power connected to the charger.

If you leave the battery on trickle charge constantly, you may occasionally have to add a little water to keep it topped up.

Astron also makes a "battery back-up" version of their power supplies
which allows a battery to be trickle charged, in-line.
I was able to buy the parts from Astron to upgrade a RS 20.

Trying again! I'd like to find a nice, working ART-13A transmitter. I'm willing to pay $300+ for the right one. It does not have to have a power supply with it, but it must work and have (hopefully) the power connector and rack. All offers considered. I also have the following I would consider as trade (only!) material
+/- $ for an ART-13 or other MIL (AM) transmitter in the 100w+, 2-18 MHz class or a Hallicrafters HT-20: Hammarlund HQ-145C (nice) and HQ-180AC (also, nice),and an exceptionally excellent Drake TR7/PS7/MS7/RV7/Mic/manuals.
Again, the equipment I have is offered as trade, only. Thanks for the read.

NEW INTELLIGENT SIGNALS FROM SPACE

ARECIBO, PUERTO RICO -- Gannett News Service reports that on November 29,
1999, the world's largest radio telescope, picked up what appeared to be an
intelligent signal coming from a small star named HD119850. What's more a
backup telescope at Jodrell Bank near Manchester, England was hearing the
same beacon a clear sign the signal was not from Earth. Astronomer Jill
Tarter 55, is chief scientist with the SETI Institute of Mountain View. Jody
Foster played Jill in the movie "Contact." Other tests were conducted from
the Arecibo control room to determine if the signal coming from 106 trillion
miles away was real. The telescope was moved away from the target star. The
signal vanished and only returned when it was aimed again at the target
star. (ed's note: the signal was in morse code, of course ;-)

Message-ID: <19991202201520.29175.00000148@ng-ci1.aol.com>
Source record: 75341

I stupidly thought when I ordered a commercial copy of the manual for my newly arrived Collins 32S3 that I wouldn't need one for the power supply. I'd rather not lay out more money for a second manual, although I will if I have to. Could somebody copy their 516F2 manual for me?

I'd be happy to pay copying costs and postage.

Thanks!

73, Avery W4OGK

I have the following items for sale. All units are as described. Prices do not include shipping. Pick up preferred on the larger items due to weigh and size. I will drive a reasonable distance from St. Louis if necessary to effect an exchange.

Heathkit DX-100. 9.9 on a 10 scale. No marks on panel or cabinet. Last on the air late summer of 1998. Includes original manual. $350

National NC-300. 9.0 on a 10 scale. Some small scratches on cabinet. Normal wear only. Has been used with the DX-100. Original Manual. $300

Central Electronics CE-100V. Cometics very good. In the restoration process. All parts are included. Scope works, power up normal. Diode and Capacitor Modules need rebuild. Parts availble from Nick Tusa in Louisiana. Complete. I don't have the time to work on it. $150.

Johnson Viking II Reveiver with VFO 122. Cabinet needs paint. Front panel is very good with one extra hole neatly done. VFO case is showing scratches. Cables and manuals included (Copies). $200

Collins 51J4 receiver. 3.1 filter. No covers. Needs new dial overlay. Old one is yellowed. Copy of manual. Chassis is very good with dust on top. Has not been recapped. Front panel has no scratches and all markings are intact. St. James Grey paint. Receives on all bands. $475

Drake B line. R-4B, T-4XB, AC-4, MS-4, Sure hand Mic with right angle plug. Original manuals and a spare tube set less finals. Front panels are very good. Cabinets have normal wear. Chassis are copper and show normal color and normal discoloration considering the age. No pitting I can find. Main tuneing knob on the RX shows wear. Also will ship spare meters and other ithes I bought from Drake to support the station. $650

Hi Bob,

I have a lovely RCA BTA500MX on 75 and 160 - needless to say I'm in Connecticut.

Just had to reply because so often I see exactly what I want that weighs over
500 lbs., and of course it's in CA!!!!!!!

In case you happen to be driving down the East Coast in a Jimmy 2500 Suburban,
you can take it home with you :)
$800 already converted, immaculate iron, very clean.

Anyway 73 from CT and hope to catch you on AM!

Al W1UX

7370. FS: "Rare" :) SILVER MODEL 903 ABSORPTION FREQ METER

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-04 00:00:00 UTC
From: "Yves A. Feder W1UX" <y.a.feder@snet.net>
Message-ID: <38492B46.C7152EB2@snet.net>
Source record: 75155

I have a "rare" SILVER MODEL 903 ABSORPTION FREQ METER complete with a set of the almost "impossible to find" (to borrow a fine phrase from EBay!) 104 Inductors.

Why rely on Y2K prone digital technology or even grid dip meters, when you can have an original Silver 903 Absorption Frequency Meter, with the original calibration markings still on the dial?

It even comes with the original monofilament light bulb, AND as if that was not enough, all still in the original factory box, water stains and all, AND, if you act now, you get the original mimeographed instruction sheet from the McMurdo Silver Company!

And best of all, it's solid state and doesn't need AC mains or battery power!

$10.00 shipped CONUS.

73 Al W1UX

7371. CESCO REFLECTOMETER

Based on recent sales:

No drill holes, with dynamotor and UNMODIFIED, about $150.
AC Power supply installed, filaments rewired, NO DRILL HOLES $100-$120.
Drill holes $45-$80 depending on other problems.

Cross-posted to: rec.radio.amateur.boatanchors,alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.equipment

I have a very nice condition Drake mic model 7077 that matches the
TR-7 line. The plug has been changed to a switchcraft right angle plug
for the 4-Line radios. I have used it on my TR-4Cw, T-4XC, etc, and
it works great.

I would like to trade this mic for an ASTATIC 10D with a G-stand. Un
amplified is preferred, but will take either.

Will consider other trades if no Mic is offered. What have you got?

It's not looking good for Mars Polar Lander.
We can keep our fingers crossed, but the outlook is grim.

Perhaps the general rise of incompetence in U.S. government
agencies has also hobbled NASA and its engineering assets.
Is it time for private concerns to step up to the plate?
Is it time that we went beyond putting repeaters in orbit,
and did something new, exciting and scientifically valuable?

We have the people within the amateur community
with the knowledge needed to create an interplanetary probe-
perhaps even one that could land.
Our community has built many spacecraft.
We have found the funds- done the work.
We have successfully negotiated for space on launch vehicles.
Our community has leaped these high hurdles many times.
Should we set another, higher hurdle
with which to challenge ourselves?

It would not be easy.
Opening new worlds is never easy.
But our community could do it- no question.

Shall we?

Daiwa CN-720B HF power meter for sale. This is the one with the large 4" meter and the polished chrome face plate. Cross needle to measure fwd and reflected power at the same time. I don't remember if works higher than 10 meters but I do know for sure that it works great for 160 to 10 meters. Power scales are 20/200/2000 watts. $90 + UPS.

B & K model 650 tube tester. Looks great. With book. $75 + UPS.

Lane:

You need the Schumacher model SE-112S 1.5 amp battery
charger-maintainer. This unit has a metal bracket and is designed to
mount on the battery. It is small and has about a 6 inch power cord.
When the battery reaches 14 volts it disconnects until the voltage drops
1 volt and then it starts charging again. Has led to indicate when
charging. I use it for the small 115 amp-hour battery on my Icom 706.
Also have one on the battery one my 15 KW diesel gen.

I got them at Tractor Supply, so if Wal-Mart does not have them check a
farm supply place or maybe automotive. They cost $30 each.

> >
> > Thanks in Advance.........

It always amazes me when I look for an old ad that I was sure was quite
common, how many magazines I have to look through before I find the ad
I need.

Anyway, QST for May 1968 has an ad for the HW-18, inside the back cover.

"200 watts PEP on 160 meters for $109.95
New Heathkit HW-18 series 2-channel SSB transceivers for
160 meters, MARS & CAP"

Some of the features listed include:
-200W PEP SSB
-25watts input with carrier for AM compatibility
-fixed tuned for easy PTT operation
-automatic level control
-clarifier control adjusts transceive frequency
-relayless transmit-receive switching
-local-distance switch prevents receiver overload
-12 tube circuit, 17 tube function
-operates mobile or fixed with HP-13 or HP-23 power supplies

HW-18-1
for CAP
4450 to 4650KHz
USB
clarifier range: +-100Hz
selectivity: 2.7KHz @6dB, 6KHz @ 50dB

HW-18-2
for MARS
4450 to 4650KHz
LSB or USB (but I guess this may be determined by the local oscillator)
clarifier range: nolisting
selectivity: 2.1KHz @6dB, 7KHz @ 60dB

HW-18-3
for 160meters
1800 to 2000KHz
LSB
clarifier range: +-250Hz
selectivity: 2.7KHz @6dB, 6KHz @ 50dB

Common specs
sensitivity: 1uV input provides at least 15dB signal to noise ratio
intermediate frequency: 3395KHz
image rejection: 100dB
IF rejection: 50dB
receiver audio output: 1Watt
unwanted sidband suppresion: 45dB min below peak output
carrier suppression: 45dB min below peak output

power requirements:
+800VDC @ 250mA
+250VDC @ 100mA
-130VDC @ 5mA
12,6VAC or 12.6VDC @ 3.75A

I remember one article in 73 where someone added a VFO, though I
can't remember which model; it was someone overseas, so either it
was the 160Meter version, or they were using one of the others on
80Meters. I thought he described an external one, but I also have
a picture of a multi-turn dial where the clarifier control went, so
he must have also tried a built-in VFO.

Any old Handbook will show you how to apply a VFO signal to a crystal
oscillator. I don't remember ever seeing a schematic or block diagram,
so I can't be sure, but considering the low cost, I'd bet that it's
only a single conversion transceiver. So the signal frequency plus
or minus the IF will tell you where the crystal or VFO needs to be.

What this radio was meant to be is a 40-channel AM-USB-LSB
transmitter/receiver. The receiver was full of kluges, basically the
Browning Golden Eagle Mark 3 receiver redesigned to be cheaper to
fabricate, using printed circuit boards in place of open-chassis point-
to-point design, as in all previous (pre-1976) Browning tube-type base
radios. So long as a few power resistors are replaced with larger
types, and the pins in the tube sockets have not lost their tension, it
is a pretty good tuneable receiver for CB channels 1-60 for AM. The SSB
detector is a poor compromise, and too unstable for routine use.
That was the good news. The bad news is that the PLL and channel
selector used in the transmitter is an abortion. Witness the Mark 4-A,
which totally dumped the old PLL in favor of a more reasonable design.
If you look inside the transmitter, you will find a couple of dozen
STANDARD-POWER (Jurassic) SN74 TTL chips, used to count the two red led
digits from '01' to '40'. Turning the tune knob to the left while at
channel 1 would light the left-hand 'limit' LED, informing you that it
is too dumb to do anything else. Turning it to the right will cause the
channel digits to count up to 40, and then light the right-hand 'limit'
LED.
Browning did something that I used to think was a good idea. They
put each and every chip in a SOCKET. This would be fine and dandy, but
they bought a big batch of TI chips that had SILVER PLATING on the
pins. This was intended by the chip factory to cut the heat stress of
soldering them to a pc board. Alas Browning put them into sockets, and
the exposed silver on all 300 or so pins turns slowly to black silver
oxide (tarnish), which has terrible conductivity.
The design of the channel selector was barely functional, but the
PLL inside the aluminum box behind the meter is only a semi-abortion.
Before you go out and buy a complete set of new chips, be sure to use

ONLY original type 74163 for the 4 parts inside the shield box. Later type substitutes (74163D, 74LS163, 74HC163, 74F163, etc.) will not work, because of a slight error in the design of the original 74163. This PLL depends on that defect to work, and later-type redesigned chips incorporated the 'correct' reset sequence originally intended for the first 74163 types. "Fixing" the chip design, causes it to just plain not work in this transmitter. The rest of the chips can be upgraded to '74LSxxx' equivalents, with a big reduction in power consumption, and heat.
Well, if you get past all this, don't forget that electrolytic capacitors are not really meant to last over 20 years, and routine replacement of every last one in the radio is the only way to make one of these at all dependable again.
Hope I made your day,
Chris, N4QMS

Source record: 75281

In article <3845C550.E664C0AA@tds.net>, johne@tds.NET (N0ZEU) writes:

>looking for information on a P&H Electronics Model LA-400C liner
>amplifier.
>I think the tubes are 1625? four of them?

There were two versions. One used 837s, but ran lower power. The other used specially modified 1625s. As another poster pointed out, they separated the cathode and beam-forming-plate wires so that the beam-forming-plate could be grounded. They actually removed the base of the tube and replaced it with the more-common 6 pin base.

But not all 1625s can be modified. Some manufacturers (RCA, for one) connnected the cathode and beam-forming-plates internally. No good.

>What would be the output of the unit?

Depends on the mode. I'd guess 200-250 watts or so on CW, 300 or so peak on SSB. They push the tubes REALLY hard - 1000 volts on the plates (they are rated at 750, max.)

>Any mod's for 160m?

Never seen any. The main concern is that the pi-net components aren't big enough. The amp was only meant for 80, 40 and 20 meters. It doesn't have a bandswitch - you adjust the roller inductor to the correct number of turns, then tune up using the plate and load capacitors. The plate capacitor is from the BC-375 tuning units, and the roller inductor from the Command set transmitters. You might be able to modify it for 160 by using a roller coil from a different Command set (the coils from the lower frequency sets have more inductance) and adding padders to the tune and load caps.

>Other questions would be size, voltage any
>problem's.

The linear was first described in QST in the mid 1950s. (I can look up the issue if you want). Very simple - power supply uses a pair of 816s, amplifier uses a quad of modified 1625s. No input circuit - they expected the driving rig to be able to match a wide range of impedances. Needs 20 watts of drive at most. Too much drive will destroy the tubes. No ALC, no metering except relative power (they used an RF ammeter!). No T/R switching built in - you have to provide it. No provison for balancing the four 1625s, either.

1625 is just a 12 volt 807 with a 7 pin base. They were as cheap as nineteen cents each in surplus, so if you blew up four of them every so often, no big deal.

I think a Central Electronics 20A exciter would be just the thing to use with one. Add the 458 VFO, and maybe a Drake 1A receiver, and see what early ham SSB was like!

From GR Catalog U circa 1970

Impedance is not constant over length. Varies from 50 ohm when closed to
57 ohm when extended. Adjustment Range: 25 cm. Physical Length: 33 to
58 cm. I can't find a max power rating. If you want constant impedance
get model 874-LK.

Hope this helps.

I was pondering: Now that we have attacked Mars will they respond in kind?

Also, instead of Marshmellows, do people on Mars eat earthmellows?

I think the Marsians probably all operate CW and AM. SSB is probably not used as it sound too much like a struggling earthling (kinda like with a Mars bar up his nose).

Source record: 75200

Hi all,

I picked up a Trio 9R-4J receiver at a local ham fest which is not working properly.
It would at least need some cleaning and alignment. The problem is that I didn't get a manual or schematic with it. I got a copy of the manual of the Hallicrafters S-38 (from BAMA) which looks almost the same from the outside. But this is a completely different reveiver :-(.
Could someone give me an idea where I could find a manual for the 9R-J4? If someone would make me a copy I would pay for the expenses in advane of course.

Best regards and best 73s from

Udo Peters dk3bi@t-online.de

I am starting to replace the electrolytic caps in my Hammarlund HQ110 and HX50. Are there any direct replacements for the mostly Sprague double and triple caps used in these things or should I just use modern single value parts?

Thanks for your help!

7457. Need help troubleshooting SX-110

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-05 00:00:00 UTC
From: Tracy Nelson <tnelson@fast.net>
Message-ID: <384AEDC0.A7A160C2@fast.net>
Source record: 75227

Hi! I'm new to tube radios (& electronics) and I was wondering if anyone could help me with a radio I just bought. It's a Hallicrafters SX-110. It was left in someone's garage for several years and was in pretty rough shape. The radio seems to receive OK, but the audio is weak. I have it correctly connected (using the 3.2Ohm leads) to an R-46B speaker, but with the volume turned all the way up it it still very quiet. If I engage the AVC, the sound goes away entirely. Can anyone tell me where to start looking? I downloaded a manual, but it's too hard to read the small print, so I'm going to order a repro manual tomorrow. Any general troubleshooting tips would be greatly appreciated (including newsgroup pointers if this is off-topic for this group). I have a multimeter which I know how to use and a scope (a Tek 310A) which I don't. I'm hoping I don't have to shelve this until I know more about electronics!

Thanks in advance for any clues!
-- Tracy Nelson (tnelson@fast.net)

7461. For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-05 00:00:00 UTC
From: W4UDX <W4UDX@juno.com>
Message-ID: <384B01DF.9AB3FA24@juno.com>
Source record: 75231

For Sale:
Alinco DJ-180TH 2 meter FM HT. In very good condition only one month old, bought from
Ham Radio Outlet. RX coverage 130 to 170 MHz. TX coverage 144 to 148 MHz modifiable.
5 watts out with supplied battery pack and on 13.8 VDC. I am including the optional DC jack
converter and cigarette lighter cable. Also included is a Radio Shack 5/8 wave 2M mag-mount
mobile antenna with BNC adapter. All this gear is only about one month old and includes boxes
and manuals and works perfect. Reason for selling: my wife had to go to the hospital and I don't
have insurance so I have to pay the bill. (It's been a bad month).
$175 for all plus shipping.
(If it had more age or use I would sell it cheaper, but I am already losing about $40).

Email: W4UDX@juno.com Thanks, Mark.

Thanks. I'll let you know.

I'd be a little concerned with their age, same as the one currently in the radio.

7468. For Sale (updated)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-05 00:00:00 UTC
From: W4UDX <W4UDX@juno.com>
Message-ID: <384B1F24.16A8DD8D@juno.com>
Source record: 75238

For Sale:
Alinco DJ-180TH 2 meter FM HT. In very good condition only one month old, bought from
Ham Radio Outlet. RX coverage 130 to 170 MHz. TX coverage 144 to 148 MHz modifiable.
5 watts out with supplied battery pack and on 13.8 VDC. I am including the optional DC jack
converter and cigarette lighter cable. Also included is a Radio Shack 5/8 wave 2M mag-mount
mobile antenna with BNC adapter. Forgot to mention in earlier post DROP-IN CHARGER.
All this gear is only about one month old and includes boxes and manuals and works perfect.
Reason for selling: my wife had to go to the hospital and I don't have insurance so I have to pay
the bill. (It's been a bad month).
$175 for all plus shipping.
(If it had more age or use I would sell it cheaper, but I am already losing about $40).

Email: W4UDX@juno.com Thanks, Mark.

TR-4 in good condition, older tuning knob style w/o NB, very nice faceplate, case could use a respray but looks OK as is, chassis has typical light corrosion. RX working FB, TX untested. $210 obo + shipping

TX-4B untested. Faceplate very nice, case shows minor scratching, minor chassis corrosion as typical. All is present and all controls operate smoothly. $125 obo + shipping

Reply by email please. Thanks for looking.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

Good suggestions posted here, Lane, but a simple one I haven't seen yet is to buy a timer and use it with a conventional low-cost 10 amp battery charger. That's how I feed my motor home. I started doing this when I noticed the first battery would still boil a little when left hooked to the charger--even on the lowest current drain. It now gets one hour a day of charging while it sits in my driveway. For occasional current drains, that's all it needs. If I use the MH lights for awhile, I just spin the dial on the timer when I leave, so that the 1-hour charge cycle restarts right away. Fast recovery, no electrolyte boil off and no frozen batteries. -- JK

Now that would be DX!!

Though I don't agree that NASA engineering is hobbled, Dave's suggestion is not so far-fetched. Pushing the (RF) envelope is what this hobby is all about. Building - then landing a package of electronics on Mars (or more likely the Moon) is probably beyond our ability to fund, but it is not beyond our technical capabilities as a group.

That said, parking a satellite in Earth-geostationary or a Lunar orbit is certainly well within our grasp. Sign me up Dave.

That argument was made before Oscar 1, 2, etc.
We found a way. And if we set our sights small at first-
say, a small beacon or digipeater orbiting the moon,
which need not weigh more then a few pounds-
we're not talking about huge money. Missions still
go to the moon on occasion- with persistence, we
could wrangle a spot on the "cruise ring."
We have lots of stations doing EME with plenty of
S/N headroom for CW.
Using PSK31 for command could be even better,
once we animate the tuning to compensate for doppler.
Someone argued that we didn't have experience
in plotting orbital entry, etc.
Well, I believe that we have many people, especially
in AMSAT, who understand celestial mechanics well
enough to do the job.
Ion drive, which is off-the-shelf now,
might provide a slow but sure way to get where we
want to go without dealing with nasty volatiles.
There are a zillion problems,
but we have the ability to solve them.

>...it is not beyond our technical capabilities as a group.
No question. It could be done.

> That said, parking a satellite in Earth-geostationary
> or a Lunar orbit is certainly well within our grasp.
> Sign me up Dave.
I don't personally have the education
to lead such a project. But someone at AMSAT does.
We need to think about doing something other then
repeating old triumphs. We need to start planning
for something higher- something that can inspire again.

Can you imagine the positive publicity that would come
to a community of "amateurs" who put a spacecraft in orbit
of another celestial body? Or landed there?
Can you imagine the fame and honors
to the leader and team who did it?
I think you'd find CBS, NBC, ABC and FOX very
interested in giving the whole team their 15 minutes of fame.

More importantly- we'd finally have something that
would excite the very best of today's youth about
amateur radio- *something that would require the existance
or amateur radio*. You've got to have radio spectrum
access if you're going to command a spacecraft.
It's something they can't do on the internet.
You can't trail an Ethernet cable to the moon or Mars.

We could sell this idea to the current
NASA administration- "space camp" for
future mission control and spacecraft communications staff.
If a team undertook the effort to create a credible
presentation, I bet we'd find NASA backing them.
With that, we could find the funds.
I'm not rich but I could certainly kick in some bucks.
How about a program to put the names of donors on
different parts of the spacecraft?
I'd buy solar cells for each of my children.

AMSAT- you've got the people with the education
and the wherewithal. Someone there is a future
team leader in search of a mission.
Put away those plans for yet another orbiting repeater,
which might be "cool" but would break no new ground.
Whatever neat-o communications package you build
into the next low Earth orbit craft,
it's been done by others before, dozens of times.

Let us challenge ourselves with something that hasn't been done;
something the cynics say can't be done:
private citizens- "amateurs"-
engaging in interplanetary exploration.
Anyone involved in such a project-
which, in the long term, would return data
advancing our understanding of the universe-
will know they have done something inspirational,
lasting, positive and even historic.

Remember what JFK said:

"We choose to do these things, not because they
are easy, but because they are hard.
Because they will require the best that (we) can give..."

I still find that passage inspiring.
It was a good idea then.
It's a good idea now.

Whaddaya say?

There are some good ideas here, but also a little misleading info. I
can't speak about any of the specific chargers mentioned. They may indeed
be float type chargers (charge fast then switch to the float voltage).
In the telephone industry Lead-acid batts are used and they are
connected to the power supply/charger and equipment all the time and have
a long life. The trick is to have the power supply/charger set to the
proper "Float Voltage". This is a pure DC voltage, not the average of
full-wave rectified.
Lead-acids will maintain a charge and not "boil-off" when the
terminal voltage is held at 13.5 to 13.6 volts (contacting the
manufacturer is a good idea since different construction techniques could
change this voltage slightly) They do not, however, charge very rapidly
at this voltage when dead or drained. For faster charging, the voltage
can be raised, but it should be lowered when full charge is reached.
Unlike Nicads, the amount of charge on a lead-acid can be determined
by measuring the open circuit voltage of the battery only if it has not
been charged or discharged for a few hours (I don't remember the exact
recommended wait-time). Again, I don't remember the exact numbers, but
the voltages I use are 12.8 or 12.9 is discharged and 13.2 or 13.3 is
fully charged. Of course you need an accurate voltmeter for this.
So, with a reasonably good DVM one way you can tell the charge is by
measuring the battery voltage and then only charge it when necessary.
Also, a small well regulated, adjustable power supply set to 13.5 V
would keep the battery charged. Running the equipment at the same time
means that the supply must be able to supply the radio current.

The suggestion to leave a load on the charger/battery combination
will only work if, with that load, the loaded charger holds the voltage at
13.5.

The "common" car-battery chargers are not made to float, just to be
afordable and to charge the battery in a reasonable time and are usually
simply a transformer and rectifier. Gobs and gobs of ripple. The
transformer voltage is selected close to the 13.5 value so that current
tapers off as the internal cell voltage rises and "boil-off" is minimized,
since it is expected that the batt will be removed soon after because it
is needed for the car.

Also, auto regulators are set to around 14.6/7 V. This is too high
for float operation, but the car battery is constantly being discharged
upon startup and always needs a charge. Obviously, long drives will over
charge and start "boiling-away".
By the way, it is not really boiling. It is disassociation of the
hydrogen and oxygen in the water. Being gasses, they form bubbles which

rise to the top. This can be a dangerous situation since the two gasses will explosively re-combine given the right conditions and a spark - not uncommon when a connection is removed from the terminal.
Hope this helps understand the issues.

Regards, Steve K9DCI@arrl.net

You might find www.spacedev.com interesting. They're a commercial company, but they are committed to attempting to land a probe on the near-Earth asteroid Nereus. I remember hearing somewhere that they've signed on at least one ham from AMSAT to their team. I think they're definately worth keeping an eye on, since they seem totally serious about attempting to do this. They're also selling payload space.

Source record: 75074

Dear Boatanchor circuit buffs,

Regarding replacing the caps in our boatanchors:
Most of our original caps are paper / wax tubular and can be effectively replaced by the modern "orange drops".
There are a few Mica and ceramics lurking in my trusty SX-28.... It has been tough trying to locate correct values for the Mica's, it can be done and we can use parallel /series combinations if space permits. However if it can't be done then when can a mica cap be replaced by an orange drop type?
Similarly, can some high value ceramics be replaced by mica or the orange beasts?

Obviously materials & construction give each cap type unique properties such as cap value, Q factors, and operating frequency range. Modern caps of different construction have significant overlap in these properties. Can anyone summarize what the intended application of tubular, mica and ceramic caps type should be?

Kind regards,

Paul.

P.S. Oh yeah, I'm also looking to purchase a matching speaker for a National NC-173.

From: Crazy George <munsch@attglobal.net>
Message-ID: <384c7224_2@news1.prserv.net>
Source record: 75080

Paper capacitors and paper/Mylar are usually used for audio bypass, the micas were used for RF bypass sometimes, and more commonly as the capacitor in a tuned circuit. Ceramics were used later in all those applications where moderate stability at .01 MF and below was adequate, and below about 1000 pF as RF bypass and coupling in these low values.

Where the actual value is critical, a given type should continue to be used for replacement. All the values of dipped micas are still manufactured, and are available from several sources. The Mouser catalog is on top of the stack on my desk, and it lists 3 to 10,000 pF values at 500 VDC.

Orange drop, or some of the newer plastic compositions are fine for lower frequency coupling and bypass (audio, low IFs), and newer ones tend to be closer in value than the old paper units.

Ceramic capacitors rarely fail, except catastrophically as line bypasses, but again, almost everything available then is still in production somewhere. The small value temperature compensating ceramics are getting rare, but you should need those only for new designs, not restoration.

Aluminum electrolytics are mostly single section now, but if the cosmetics aren't a concern they work fine. One caution, use 105 degree rated electrolytics where available in the tube boatanchors, they last a lot longer than the more common 85 degree rated units, which are fine for cooler running semiconductor stuff.

Specifically, what value micas are you replacing, and where in the circuit are they?

I am selling two amps. One is the Henry 2001 and the other is this Yaesu FL-2100. Whichever one sells first does not matter. The one remaining is the one that I keep. This FL-2100 has a new meter multiplier string and has new 12vdc operated muffin fans to cool the tubes in place of the original record player motor type fans that operated off of 120 vac. The tubes that are installed BRAND NEW Cetrons (US made) with very very low air time. Included is a BRAND NEW set of Taylor 572Bs bought from RF Parts a few years ago. The swr circuitry has been removed by me from this amp. I intended to replace the parts but never got around to it. This amp is 110% operational (sans the vswr circuitry) and is a really really good workhorse of an amp. Comes with a copy of the manual. Typical output is 800 watts on 40 meters with 100 watts of drive, a plate current of 500mA and the plate voltage at 2100 volts. Similar output on other bands with slight reduction on 15 and 10. This amp WILL tune 17 and 12 meters in the 15 and 10 meter band positions but if you run a solid state exciter you will need to use the autotuner.

$375 gets this amp + spare tubes. UPS charges are paid by the buyer. This amp will be double boxed and the tubes will also be double boxed and shipped seperately via UPS ground. Figure 50 pounds when calculating shipping costs.

I have an excellent condition SWR-121HF graphical antenna analyst. This
is the best way to see what your HF antenna system is doing.
The SWR-121HF features:
.Graphical display of SWR versus frequency from 1MHz to 31.999MHz.
.Compact battery powered for portability.
.Automatic SWR scaling for best results.
.Digital readout of SWR-at center frequency and top of plot.
.Display of return loss in dB.
.Keypad selection of center frequency and frequency increments.
.Auto battery-saver functions.
.Automatic centering of SWR null.
.RS-232 interface allows remote control, remote display, and saving
of plots (optional PC software available).
.Internal beeper provides audible indication of SWR.
.Self-test and calibration functions.
IT includes the manual and a case. $295 shipped.

Hi All,
I do believe that the modifications made to a lot of these old sets were done with good intent and are a part of the ham hobby. However, it is sometimes impossible to figure out just what the previous owner had in mind when making the modification. I recently bought a very good-looking National NC183 that had been "modified" and it was anybodys guess as to exactly what the modification was meant to do. Removing it was next to impossible due to the extent of the modification, so the set was disemboweled and parted out. The very nice-looking cabinet was switched with another nasty looking NC183 that had a chassis with no modifications.
The real problem is when modifications are made by plumbers that fancy themselves as electrical geniuses.....
rgds,
Mark S.

I'm done! After 25 years, I finished my crystal-controlled Heathkit HW-16 and will be trying it out soon (I know, I'm crazy).

Are there any "typical" frequencies that crystal users gather around? The HW-16 is for 80, 40, and 15m, and I'm currently limited to the Tech+ bands (although I'm planning to take the General exam in 2 or 3 months).

I seem to recall once seeing a web page with frequency suggestions for crystal users, but can't find it now.

Web pages for crystal users, or suggested frequencies in the Tech+ band (and/or General) for crystal users, would be appreciated.

Thanks,
Robert

Sounds interesting. I look forward to hearing what progress
you've made on this next fall in Portland. If you think it's
a good idea you're the obvious person to make it happen...

The RF and stuff shouldn't be a problem. Getting a launch may
be tough, as it is proving with current AMSAT projects.

The choke in the HV Power Supply for my Halliscratchers HT45 just died by arcing internally. I'm looking for a replacement. The original was rated 4-16 Henry Swinging Choke, 350 ma, and has about 4.5KV DC between its winding and its frame.

@ Anyone have something that would work?

@ Anyone know of a source?

@ Anyone know if it can be rewound?

If so, where?

@ Anybody have the makings of a 2700V, 1/2 Amp Power Supply?

@ Any leads appreciated.

Hello,

I recently added a PREFIX look-up form on the QSL page. If you need to know where a prefix is from, simply enter the call or prefix and see what country it is assigned to.

You are invited to http://hfradio.org, a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

73!

Source record: 75108

I want to add a general coverage shortwave receiver to my boatanchor station. The station consists of a Collins KWM-2 with accessories, a Viking Ranger, and a Drake 2B. I want something of the same general vintage, tube of course, but a reasonable performer. Smaller is better than larger, and of course I don't want to have to take out a second mortgage to buy it. I presently have a National SW-54; it's dandy little receiver, very classy looking, but a marginal performer.

Any thoughts on suitable classics are welcome. Thanks.

Mike, N4PDY

I did a search of EBAY and the latest I show is 113.00 for one that did not work. You should probably get about 150-250 depending on condition. I find that prices are always higher then in Osterman's book.

You'll probably get a lot of advice on this one!

Two Hallicrafters sets that come to mind are the S-40 (or S-40A, S-40B) and the SX-42.

The S-40 is a nine-tube set and would be a step up from your SW-54. It has a built-in speaker and is quite easy to use, yet gives good performance. S-40s are quite plentiful and it should not be hard to find a good one at a reasonable price (under $100).

An SX-42 is from the same era (late 1940s) and was Hallicrafters top-line receiver. It has fifteen tubes, gear-driven tuning, and lots of features. It is larger and heavier than the S-40 and requires an external speaker. The SX-42 also receives FM and uses push-pull audio for better sound. It would set you back a few more bucks. I would expect a decent SX-42 to cost $200-$300 (swap meet prices not Ebay :-).

You can see pictures of both sets and get more info at the following web pages:

http://antiqueradio.org/halli02.htm
http://antiqueradio.org/halli07.htm

Hammarlund also made some excellent receivers. I own an HQ-160 and HQ-180AC and they are both great. In size, features, and price, they are closer to the SX-42.

There are lots of other good choices -- these are just a few that I have used.

Have fun picking one!

TR-4 in good condition, older tuning knob style w/o NB, very nice faceplate, case could use a respray but looks OK as is, chassis has typical light corrosion. RX working FB, TX untested. Also includes a tattered, though perfectly legible original manual. $200 obo + shipping

R-4B (with MS-4) in very nice shape. Great face, minimal corrosion, working FB on all bands, several extra crystals for 9, 15, 28, and 1.5 MHz.Includes original manual complete and in good shape. $225 obo + shipping

Reply by email please. Thanks for looking.

Congrats on the HW-16! It's a fine old rig with a good receiver.
The "BA" (boatanchor) crowd hangs out around 7050 KHz. You'll hear
a lot of crystal-controlled rigs there (including mine!).

From: arnoldg@sf.telia.no
Message-ID: <384d6df7.6838840@news.telia.no>
Source record: 75123

Can anyone help me with a tape supply motor for an Ampex 354 recorder.
The spindle is slightly bent on the one I have, and it is unusable on
10.5" tapes, and hardly usable on 7" tapes. I need only the motor, not
the braking assembly.
I have an Ashland capstan motor for the Ampex 354 tape transport I
don't need. This is a 60Hz motor so I can't use it. I can buy the
supply motor or change it against the capstan motor.
Please e-mail me directly.

Best regards,

Arnold Goksoyr

Back in my Navy days (late 60's, early 70's), we used a goniometer to switch between the vertical elements of a CDAA (circularly disposed antenna array). By comparing signal strength of a signal between elements, we were able to use this system for high frequency direction finding. Quite effective. Why anyone would want to buy one of these is beyond me. Ours took up a space bigger than the room I currently use for a ham shack.

Wayne, KEï¿½BZ

Naw, SX-42s and S-40s are way too old. M2s are from the early 60s, the Drake also, and the Ranger from the late 50s. The Hallicrafters are late 40s, very early 50s. Get a 51S1 or 651S1 depending if you want before or after solid state. The only other general coverage receiver of that era worth considering is the SX-88.

Source record: 75133
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For sale: Henry 2001 2000 watt input 3.5mhz to 30 mhz amplifier. Runs a pair of 3CX400(8874) tubes. Nominal output is 1200 watts. Covers the following bands with seperate band switch positions for optimum output:
80, 75, 40 cw, 40 phone, 20, 15, and 10 meters. Uses a ceramic form roller inductor in the output network. I have never tried to load it on the WARC bands so I do not know if it will work there or not. Tubes use forced air cooling. Duty cycle is 100% ssb or cw, 50% key down. Can be used on 240 or 120 but it really performs great on 240vac. Draws up to 15 amps on peaks at 240 vac. maximum drive is 75 watts. 2kw input on ssb and 1kw on cw. Tuned input. Multimeter measures plate current, grid current, plate voltage, and exciter input power. Approximately 7" tall by 14" wide by 14" deep. Weighs 41 pounds but shipping weight is approx. 50 pounds. Typical outputs are 650 watts cw with 25 watts of drive with 550mA on the plates at 40mA of grid current. Or, 1200 watts out with 75 watts of drive with 900mA on the plates and Ig at about 50mA. This amp also comes with a spare Eimac 8874. The tubes that are in the amp have very low air time and they are like brand new in emission. This is a rugged amp built like a tank. This is actually better built than the older 2 hole Alphas of the 70s and 80s.

Front panel cosmetics are abt a 9/10 and the overall cabinet is abt an 8/10.

Will double box amp and tubes seperate and ship only via UPS ground. price is $875 plus UPS charges on 50 pounds from San Diego 92139.

> worth considering is the SX-88.

Well, I would dispute that a SX-88 is the *only* other receiver worth considering, especially since you recommend two of Collins' worst performers (51S1 and 651S1). A 51J-4 is a *much* better performer than either the 51S or 651S. The 51S has a terrible front end and can only be used with a short antenna. It also has a funky tuning feel. But the 'J4 is overpriced, especially if you want extra filters. The Collins "afficianados" think they're worth big bux for some reason.

The 651S1 was the dawn of solid state for Collins, and the syntesizer design is mute evidence that Collins had a lot yet to learn in this area when this radio was designed. The *worst* feature by far of the 651S1 is the fact that the receiver mutes with every increment of the tuning knob. This is to mask the slow lock-in synthesizer (you can disable this mute but then you have to put up with a chuff and buzz every time you change frequency). It is also the biggest pain in the ass to service if you don't have the extender cards, and uses RTL and DTL flat-pack ICs that you just can't get anymore. Believe me, it ain't worth it (I own one and fix it myself, I'm ashamed to admit).

A nice radio of the 60s is a TMC GPR-90, but it kinda has rotten audio. A SP-600 is pretty good also. Of course no collection is complete without a R-390 or '390A.

If you want nice audio, go with a SX-28/42 or a Super Pro. If you need to listen to SSB, then a HQ-170 is pretty good, as I remember, also a SX-100 (although it drifts a bit). The SX-100 is also kind of a "mini" boatanchor - won't bust your table or your back.

Lotsa choices. I've owned all of these radios at one time or another so contact me if you want more specifics.

I knew we were in deep kimchi when they started giving cutesy names to
martian rocks back with rover.

Really, I continually hear of horror stories in engineering about how
the 'new crop' don't know s**t compared to the engineers that started
with hobbies in a field that eventually led to their profession. It
seems that mommy and daddy want their johnny and debbie to be enginawrs
so they, by the skin of their teeth, make it and flood the field with
book theory but no practical experience. Great with dif-e-q but a
lacking of that fine practical touch or sense that marks the REAL
engineer. What makes it particularly bad is that the 'new crop' really
don't have role models to work under so as to develop style. It seems
that medical science is no different in this regard.

I look at computer equipment and see many examples of peculiar design
practices. How many of you old guard electrical types would put
together a package (computer) that you can't even shut off?

So... how much has recent aerospace engineering cost us in terms of
wasted dollars and man-hours---has it reached a trillion yet? Gee...
space exploration seems another re-distribution of wealth (maybe
welfare) to my way of looking at it. Should those responsible be
publicly reprimanded?

Snipp: 'new crop' don't know s**t compared to the engineers that started
with hobbies in a field that eventually led to their profession.

YOU GOT THAT RIGHT !.....We are going to be in bit trouble JFK plains
are dropping parts on roofs here after servicing.
The old Grumman and Sperry facilities that built the LEM will sadly be
turned into a shopping Mall here in Long Island.

>They use a goniometer to measure the extension and flexion of my knee after
>surgery.....sort of like a fancy protractor for measuring angles.
>Is this correct?

Yes....goniometer means "angle-measurer". The radio version uses two
crossed loops (or 4 verticals) to measure the bearing of radio signals.
The goniometer allows you to take bearings inside the shack without having
to physically rotate the (external) antenna system.

Fortunately for the world, others are taking up the slack. While FAA and ATB are going over Boeing's designs and production methods - companies such as Airbus and Embryair continue to produce outstanding aircraft at reasonable prices.

Since our engineers are no good...

American corporations in America will continue using N1B's (imported engineers from third world countries - 127,000 this year - that's 127,000 American jobs lost)

I think it's more a question of economics. In my field-- software engineering-- third world engineers (especially from India) can be had for a small percentage of the cost of an American engineer.

Source record: 75021

Viking Invader 2000 for sale. This is a very clean and very heavy top
of the line transmitter. Limited production as only about 500 were
produced. This is the original version, not a converted Viking
Invader. I have never powered it up but was told it was operational
when I bought it 3 years ago. It has been kept inhouse closet storage
since I have owned it. It is extremely clean and is probably as nice of

a unit as you could find. All connecting cables and original manual are

included.
The RF deck is manageable by one person, but the power supply is
definitly a two person lift. For this reason, It is not able to be
shipped. Pick up only. San Francisco Bay Area.
$850
73,
Jack

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a complete Johnson RF Amplifier less the two 4-400s. This would make a great spare, or can be matched up to a PS and be a nice heavy duty HF Amp or it can be a start to collecting the parts to put together your Desktop KW. It uses a very large Roller and a very large variable. There are no modifications and condition is good. It has some blemishes in the paint that might clean out or it can be re-silked This was taken out of a working desktop that was parted out.
Asking $450 shipped or best offer. 73 Chris VE3NGW/W4 Florida

Hi, I have a bunch of stuff what I assume to be the following:

>>Motorola Mitrek lowbanders. 3ea. Crystals say 42.100 so maybe the proper split for 6 meter conversion? one with 1 set crystals, 2 none. includes mtg. trays. cases in great shape as are internals.

>>Control Heads: GE Master II, grey/ivory clamshell with 5pos. rotary, vol. rotaty, f1/f2 rocker, on/off rocker, and search toggle switch. Several from fair shape to really good shape with mics.

>>Control Heads: GE master pro? old grey with two silver rotary knobs, red light, toggle, etc. the really old ones. Have mics.

>> Control Heads: Motorola Mitrek, etc.:? Orange, brown and ivory, 3 heads, one with a,b,c,etc. switches (pl head?) two with np1/np2, f1,f2, etc. one dual mtg. bracket. One with mike. one uncut cable, maybe more....

>>Several uncut cables for master pro, masterII, and a couple mitrek.

>>4 GE MVP HT's. crystals say (tx removed) 154.xxx so they're vhf hiband. good shape with LOTS of stickers, etc. 2ch, 4ch. bad batteries, of course, and a couple of vehicular chargers, no cables. one missing antenna. fifth one for parts, won't come on. others do rx., and have a pl reed here and there.

>>Whelen Power centers model PCC. 4 switch switchboxes. about the same size as their sirens from a few years ago. Probably same box. one 2pos. for lightbar, one 2pos. for takedowns and one 3pos for front/rear flashers and a momentary labeled Hi/Lo. 4 each boxes. one missing a switch, one with an added toggle. all but one I think has orig, cable and plugs. fairly good condition, one with little surface rust in the face. great hi-amp boxes. clean, paint, good as new. not dented up or squashed.

Sell, trade, whatever. cheap, cheap, cheap! Not looking to get rich or give you sticker shock.
email if interested and thanks for the time!
Randy

Hi,

Thanks for reading.

I'm looking for some information on an older piece of Motorola Test Equipment. It is solid state but I think 60s/70s vintage.

The TEK 21 PUSLE GENERATOR. A small almost palm sized box with a generator circuit in it that was used to produce noise to test receivers in filtering.

I need the schematic at least and any other info you may have on it.

IF you have said info, let me know the cost to get it to me.

E-mail me directly.

Thanks,

Lou/DP.NET

Hi Paul,

Don't replace a mica or ceramic unless you know it's bad. Even the really old ones rarely fail. Plus they are almost always in tuned circuits, i.e., replacement = realignment. Plus, many ceramics will be temperature compensating, which will make finding the right thing even more of a challange.

As you know, modern tubulars are a great replacement for wax/paper. They may also be used to replace larger value ceramics that are NOT in tuned circuits. They are not suitable for replacement of micas. Tubulars, both modern and old, are inductive and not suitable for tuned circuit use.

Bottom line in my opinion ... Replace all of the wax/paper caps with mylar or polypropylene caps (orange drops are a fine choice), replace all electrolytic caps with new units, and don't touch the micas or ceramics.

If you are really intent on replacing stuff, check the values on the resistors. Most of the old carbon comp units will drift higher in value, especially the ones that are disapating any degree of power.

73,
Steve Robertson, KE4OH

7627. ** FS: Y2K compliant VACUUM **

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-09 00:00:00 UTC
From: "JOSE V. GAVILA (EB5AGV/EC5AAU)" <eb5agv@ctv.es>
Message-ID: <384F87DC.D23D480@ctv.es>
Source record: 74951
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Dear Sirs,

We have for sale a large quantity of pure Y2K compatible VACUUM, so you can easily make your tube sets Y2K compliant WITHOUT swapping all the tubes with the new Y2K compliant ones. You just need to carefully open your tubes (with a Dremel tool or similar set) and insert our VACUUM, with the provided (patent pending) accessory, which does also the envelope sealing in just a minute for tube.

Fast and (almost) risk free!. Don't let Y2K ruin your collection!

And the best: our unbeatable price!. You can get a bottle full (or empty?) of pure VACUUM for just US $2,000 (plus P&P; it is lightweight). A bargain compared to the cost of Y2K tubes!. Quantity discounts available on request.

To probe all of this, which MAY sound too nice to be true, here you have an unrequested testimomial:

"Dear Sirs, last week I got a bottle of your VACUUM. I must confess that, at first glance, I was surprised to find just an empty bottle inside the packet, along with the accessory set. But once I realized that the bottle should be filled of vacuum, I decided to check it in one of my most preciated sets which had some non-Y2K tubes in it. I pulled all the tubes and followed your detailed instructions. To my surprise, after the tubes were filled with your VACUUM, the set sounded vastly better than before. And the sensitivity increased so much that I needed to turn down the RF gain. And the glowing was not just a dull red, but a pretty dull red!. I am very happy with your product and have in the mail another check to pay for another bottle. Keep on the nice work!", signed by Mr. John Glow

There is no excuse!. Get your VACUUM right now!

Best regards and HAPPY Y2K :-) :-)!

The VACUUM Company, Inc.
http://www.y2kvacuum.com

PS: REJECT CHEAP IMITATIONS. Our VACUUM is the only Y2K certified around the globe.

7634. FT243 xtals wanted - between 7025 and 7060 KHz

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-09 00:00:00 UTC
From: Patricia Gibbons <wa6ube@ix.netcom.com>
Message-ID: <384FCFD4.1EE5@ix.netcom.com>
Source record: 74958

Before I go out and purchase new ones.. I am
looking for FT243 or equivalent crystals specifically
between 7025 and 7060 KHz ..

I already have 7050, 7054, and 7058 KHz..

Am looking to enhance some frequency options for
my AN/GRC109. Currently I have about 25 xtals, most
of them in the 40-meter band, except for the segment
listed above...

For info, I usually use a thick piece of plate glass,
and comet cleanser to grind xtals higher in frequency.

I tried a different method last week on one that I
had for 7035 KHz. I had use the comet cleanser technique to
move it up to 7037 KHz sometime ago. Well I pulled
this crystal out of my storage box and disassembled it,
then tried a 400-grit diamond-hone.

After only 20 passes on the crystal blank the
frequency moved to 7079 KHz!! YIKES! =:-o

I think I'll go back to comet cleanser... :-(

Trish

Udo,
I recall using a Lafayette receiver that looked very much like an
S-38. I"ll bet that it's the same as your Trio (Lafayette was
a large American electronics retailer that sold many Japanese receivers
with the Lafayette name on the front). Maybe somebody out there
has one of these Lafayette S-38 lookalikes and can compare notes
with you to see if they're the same.

Source record: 74963

Picked up three fairly heavy tuning units from an auction many years ago. May have come from a University/ College. They are black, appearing on a metal tag on the front is Tuning Unit TN-18-APR 4, also have a Tn-19, and a TN16. Another number appearing on one of them is CRO-TN-16 1052-DAY-45-SP. They appear to be the tuning units for a larger set. They appear to have slid into another unit, there are connectors at the rear. No indication of who made them or what they go with. They are probably about the same size as a Command set TX.
?????anybody have any ideas????
Thanks
Ray

Hi,

I have one EEV (English Electric Valves) C1111 valve for sale. This is
the same as 715C. The valve is in its original packing and unused.
Very nice and in mint condition. Top quality.
Best offer.

Regards,

Arnold Goks�yr

Source record: 74967

I had several goniometers about 10 years ago; they were in beautifully crafted wooden cases with a really impressive knob and compass rose. When I opened it up it had two coils at 90 degrees, each of which was to be connected to an outside antenna (loop or whip...as long as they too were at 90 degrees, and cables were EXACTYLY equal).

Then inside the two crossed loops was another coil which could be rotated by the knob. The connections on this coil were marked TO RECEIVER.

The idea was that the outside loop antennas would pick up signals from all directions, but the FIELD would be delivered down the coax and recreated inside the box, and then you would turn the inner loop to determine the direction of the signal by either looking for a null or a peak.
I know I had 3 such units, one I gave to a radio friend, who no longer has it; the other wo I think my wife threw out. OUCH!!!

The APR-4 was an early ELINT receiver, 30 to 1000 MHz, individual plug-ins originally, later a bandswitching one. Used for airborne radar intercept in late WW2 and Korea. Were choice ham items in the 50s, but there is much, much better stuff out there now. Some collector might be interested. And, there are probably APR-4 mainframes around, I gave mine away about 1971 and replaced it with a Bearcat scanner.

Just slightly - it's one of my particular interests. The APR-4 was known in ECM (in WWII called RCM - Radio CounterMeasures) circles as "Old Faithful." If you count the third world countries who used it long after the US graduated to more sophisticated gear, it had an operational lifetime of almost 40 years. The tuning units you describe are combined preselectors/mixers to produce a 30MHz output used by the R-xx/APR-4 mainframe (several different versions of this exist, thus the R-xxx). If you want more detailed info send me a note and I can give you reams.

A couple of weeks ago I posted a message asking for two of the smaller knobs for the front of my Drake 2B. It has had some dreadful 'wronguns' on since I got it.

The first guy to reply ceased contact when he found I was in the U.K. The second guy to reply KNEW I was in the UK, said he'd sent them and now he won't even reply to my e-mails. I've offered him money too!

I am more than willing to PAY for a couple of knobs if someone will just help.

In an earlier posting another amateur offered to send me details for my RME69. I sent him $10 as agreed and I got a great set of copied info. and can now rebuild my radio.

ANYONE have a couple of knobs?

I found a Trio 9R4 receiver at an Amateur Radio flea market a couple of years ago, and have since acquired as well two Lafayette KT-200 receivers (the kit version of their radio) which look similar. However, the Lafayette radios use miniature tubes, while the 9R4 uses octal tubes. In addition, the S-meter on the Lafayette receivers is mounted with its frame inside the cabinet, where the Trio's S-meter has its mounting frame on the outside. Where the Lafayette uses slide switches, the Trio uses toggle switches. In addition, the placement of controls, while similar, is not precisely identical.

All three of have the same main tuning dial as an S38, with numbers rotated so that the lower half are upside down on the front panel.

I am finally getting an old S38 (the "original" of these three) to complete the collection.

I have a Heath Mohican I guess it's worth $150.00 It works pretty good
except for AM. But it is as is.
A Hallicrafters SX-25 last time I plugged it in it was working, but it

again is as is. $150.00
And a Hammarlund Super Pro 210-LX. Face plate has been chromed, I
guess a P/O had scratched paint. Hey a radio with great chrome. I do
not have the P.S. for it and the band change bushing on the face plate
is missing. I did fire it up about
ten years ago on a Heath supply, (but I sold the supply) worked fine
them but it again is , as is. $175.00.
A Heath IG - 82 audio genny...as is but was working. $30.00
Eico ST-40 tube amp $100.00.
Ampex 350, 351, 440. All stereo 1/2 track 1/4 inch. With Inovonics
electronics and origianl Ampex roll around cabinets.
$200.00 each. (if you think radio boatanchors are trouble shipping
check out these things)
I was using most of this gear , and it was working last time I used them

but there are no guarantees. Just hope I'm not giving it all away.

Yes, I saw an ad for this stuff in the back of a comic book the other day. You know you're getting old when you look at the price of a comic book, and are shocked by the price; I can remember when comic books were a quarter. Anyway, I immediately sent off my money because this clearly is a fine product backed by a fine company.

Actually, I see a secondary use for the product. I have a lot of old and worn out tubes lying around. It seems a shame to throw them out, yet they are kind of weak and less than perfect at this point. After all, some of them are getting on in years, just like myself. Clearly, the solution is to inject them with some new vacuum to put some zip back into them. I'd thought of this before, hadn't even considered the Y2K problem with tubes, but for the life of me I couldn't figure out where to get an easy to install source of vacuum. Thank goodness for such fine firms as The Vacuum Company, who must have spent oh so many millions to develop this fine fine product, so no longer is injectable vacuum merely a lab curiosity or the domain of those with large budgets.

I have to go and write a letter to QST about this new product. I'm sure the boys in Newington will be as excited as I am.

In article <384C54AF.3F9F6236@tds.net>, johne@tds.NET (N0ZEU) writes:

>Wondering what a tube number 203A would fit in to??

I don't know of any commercially made ham rig that used the 203A.

The 203A was a popular tube among hams who could afford it in the 1920s and 1930s. It's a directly heated triode. Versions were made by many manufacturers, but the design originated with RCA, I believe. It is the thoriated-tungsten version of the 203, which goes way back to 1923 or even earlier.

A good one is worth quite a few bucks to someone who's interested in building a "1929" transmitter. Even a dud has some value as a display piece and collectible. Please don't just heave it!!!

Uses the old 4 pin jumbo bayonet socket. Here are some specs:

Filament: 10.0 volts, 3.25 amps Amp. Factor 25 Plate dissipation 100 watts

As a Class C RF amplifier, one 203A can be run at 1250 plate volts and 150 plate mils (187.5 watts input). With a grid leak of 5000 ohms and grid current of 25 mils, driving power is 7 watts and output power is 130 watts.

I can dig up more specs if you need them.

LAFAYETTE TE-18 Grid Dip Oscillator
"A very Rare and Futuristic looking item"!

This is a very rare and hard to find Lafayette item. It's the TE-18 Grid Dip Oscillator which is Complete with it's little box of 8 coils and original manual. The Manual is dated 1962 and is perfect. The unit runs off 110vac and covers from .36 to 220mhz in 8 ranges. It can be used as a GDO, a Relative field strength meter, and a signal generator. It also has a provision for an earphone. The controls are: ON/OFF, DIODE/OSC., Sensitivity, and Tuning. The Condition of the unit is WORKING and almost mint and Very Collectable.

That situation has not changed in 40 years, or maybe longer! When I
went to college in 1958 to become an EE there were many other students
who had never seen the insides of any piece of electronics, yet they
weer taking the same courses as I was and getting the same degree. To
me it seemed difficult to understand they could 'do electronics' 40
hours each week and then go home and do something entirely differnt.
The driving force was the high salaries being paid to engineers back
then! Cheap labor is simply an exploitation of te individual!
Exporting American jobs doesn't make it any better.

> > Ted Zateslo, W1XO

Thank you for your information. I also heard that Trio equipment was sold in the US under the brand Lafayette. This was also true in Germany sometimes. My receiver carries the brand JENNEN on the front panel. So there will be a lot of identical receivers having different brand names. What seems to be the same all the time is the model name 9R-J4.

>

> Cortland

Thank you for your information. My receiver uses miniature tubes except in the rectifier, where an octal 5Y3 is employed. The remaining tubes are: audio output 6AR5, detector AGC and audio preamp 6AV6, BFO and noise limiter 6AV6, 1st and 2nd IF 6BD6, mixer 6BE6, RF-oscillator 6BE6, RF amp 6BD6. The S-meter on my receiver is mounted with its frame inside the cabinet. It uses slide switches for the noise limiter and receive/stand by funktions. The dial also has rotated numbers with the lower ones upside down. They are still readable however ;-).

Have you got any manual or schematic which you could make me a copy of? Young, KF2HY, promised to send me a copy of the schematic via mail, but it didn't arrive yet. Mail needs a little more time before xmas ;-).

It would be nice to have the manual because of the alignment instructions. But I should be able to fix the receiver with only the schematic.

Best regards to both of you and best 73s de

Udo dk3bi@t-online.de

Hello John .... Tom KI3R from Port Vue Pa. My fix for the problem would be to set your HA 800 on the bench preferably in a field. The get your shotgun. One well placed shot would do it. I have had various Lafayette receivers over the years. Some were better than others. My HA-230 drifted so bad that a qso actually required one hand on the bandspread and move the indicator an inch or more. This was a rx touted to have anti drift circuitry. Yep the mixer tube had the heaters on continually ...a perfectly good waste of electricity. My HA-350 was not too bad in the drift sense but the sensitivity went limp above 10 megs. I really think that LaFayette meant well ...they delivered a cheap rx with the corresponding problems. I would opt for a newer used rx that will give you the stability. God Bless and Merry Christmas ..Tom

Hello Jim:

I do have an original manual for the Rycom Model 3182 (R-1655/URR, but I won't part with it. It has 48 pages plus some fold outs. I can copy it for you, but a copy will run you $25.00. Maybe the $100 is worth it, however it certainly is a lot of money.

Tony Faiola, K3WX, Silver Spring, MD

Jim Mandaville wrote:

Hello Mike:

I have a GPR-90 with the companion GSB SSB Slicer, also the manuals. They have been in my basement for many years, and they have not been turned on since the last time they were working. If you are interested, please contact me. Maybe you can stop by to see them. Thanks. Tony K3WX

Hi. I have a TenTec PM-3A and it's matching AC supply for sale ($175 plus shipping for the pair)or swap. I'm looking for older military HF manpack stuff, such as the PRC-64, 74, or even vhf stuff like the PRC-25 and PRC-77, or the PRC-68. Let me know what you have and maybe we can sling radios through the mail. Thanks.
Jim W7LS

Price reduced -
For Sale:

Kenwood AT-130 Antenna Tuner. Has FWD/REFL power/SWR meter built-in.
Excellent condition, and in original Kenwood box with special
cable included.

This tuner looks great and matches nicely with the TS-130 series, and
also looks "correct" with a TS-530, TS-830 and the TS-120.

Will sell for $115.00 plus shipping

7693. TO-Keyer Inventor Sought

Dad, W9EHS, recently passed away and knew Jim. I'd like to talk with
Jim to see what he knew about the keyer Dad used in the 40's. None of the
obvious avenues yielded Jims address or phone.
Only loosely related - anyone familiar with the
Woodruff/Halligan/Ricks story in the 60's. I have some letters and am
simply curious to hear any other angles of the story.

If you have a _solid_ lead for Jim, please email. I'll be glad to
honor Jim's request for privacy if he wishes, but would at least like to
know definitively if he would care to talk.

73, Steve Noskowicz K9DCI@arrl.net

The QRZ email address is stale
QRZ says he lives in Seattle. No phone listing there.
There is no phone listing in Cobden.
The ARRL database doesn't have any info, per the Central ARRL mgr.
The Central ARRL mgr says he saw Jim at last Dayton.
His highshool friend, W9PPH, hase not kept in touch.
Others have said they heard Jim on 7040 up until a few years ago.
I haven't yet tried calling all the Ricks that turn up from a web search
and am hoping to avoid it.

Gee. Was that the Wullenweber (sp)? There was also a goniometer on
the AN/GRD-6 since de-classified. It formed an electronically rotated
U-Adcock out of a circle of verticals.
There are easier ways to do it these days.

Also, you need to specify the frequency range goniometer you need.

Tom,

I might would consider that but wouldn't that be a terrible waste of a perfectly good shotgun shell? I know what you mean about Lafayette receivers. This one is not too bad so I think I will opt for less radical procedure. I have several other receivers, but this one was free. Thanks anyway. Merry Christmas to you, too! Jon.

Boy, that brings back memories!
My first rig as a novice contained exactly one crystal....a 7050 Khz crystal..but of course, as a novice, that frequency was off limits for me on 40 meters. But it would tune up fine at 3x...right in the middle of the 15 meter novice section at 21.150. I remember calling CQ on that frequency and then basically tuning the entire 21.100 to 21.200 segment!

LAFAYETTE TE-18 Grid Dip Oscillator
"A very Rare and Futuristic looking item"!

This is a very rare and hard to find Lafayette item. It's the TE-18 Grid Dip Oscillator which is Complete with it's little box of 8 coils and original manual. The Manual is dated 1962 and is perfect. The unit runs off 110vac and covers from .36 to 220mhz in 8 ranges. It can be used as a GDO, a Relative field strength meter, and a signal generator. It also has a provision for an earphone. The controls are: ON/OFF, DIODE/OSC., Sensitivity, and Tuning. The Condition of the unit is WORKING and almost mint and Very Collectable.
High Bidder must contact the seller within three-(3) Days of the auction ending. Items sold to USA and our Neighbors up in Canada, no international shipping!!! Payment to be in US Postal Money Order. Most items shipped by US Priority Mail.
Payment to be received within 10 days of the auction ending.

Source record: 74990

HEATHKIT VF-1 VFO, 160 to 10mtrs + 11 meters
"Matches the DX-20 thru DX-40"!

This is a Heathkit VF-1 Vfo which covers the 160 thru 10 meter amateur bands, plus 11 meters. The Cabinet is in Very good condition with some minor blems on the front panel. The Frequency dial inside, is partially missing at the very top but still useable(readable). It has the octal plug on the end of the connecting cable plus there is a FT-243 style plug on the end of the VFO output cable for easy hook-up to your rig. This Vfo will match all the heathkit dx-20 to the dx-40 but will work with others using the same voltages. This unit is being sold untested because I do not have any transmitter to test it with. High Bidder must contact the seller within three-(3) Days of the auction ending. Items sold to USA and our Neighbors up in Canada, no international shipping!!! Payment to be in US Postal Money Order. Most items shipped by US Priority Mail.
Payment to be received within 10 days of the auction ending.

7716. Re: Signal Drift on Receiver????

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-11 00:00:00 UTC
From: n2cqr@erols.com
Message-ID: <38527d5a.176026715@news.erols.com>
Source record: 74845

I really object to the suggestion that shotgun violence be done to the HA-800! I guess this is an indication of the sentimental attachment that I have to this class of receiver. As a teenager in 1973, I drooled over this receiver and its general coverage partner, the HA-600. I got the HA-600A for Christmas ('73 I think) and it opened up the world of SW for me. I lived in fear that it would be hit by lightning. I covered it with a protective cloth each night to prevent dust from gettin into the "jeweled movments". I listened to HCJB and to the group of college-aged AMers on 75 meters (many are still there, but older). I used it to make my first ham radio contacts.

I bought an HA-600 on the internet a few years ago. I do notice the drift problem. I don't remember the HA-600 "A" model drifting as badly at this one does, but that may be because as a teenage radio fiend I rarely turned the thing off. That may be the simplest solution. Keep it on all the time! Use that standby position on the funciton switch.

One other thing I like about this RX: Simplicity. You can get in there and work on it and you can understand the circuitry.

I think a little drift should be forgiven. Put that shutgun back on the rack.

Hello,

I am trying to find out the military denomination for a receiver similar to the URR-13 that covers the VHF band from 100 to 200 MHz. By the way, the URR-13 covers from 225 to 400 MHz.

I also need the appropriate manual or schematic.

Any help is appreciated.

Might be a AN/URR-27 (105-195 nominal). Does your '13 have to small doors
one on each side and a small crank knob for tuning? S- and audio meters?
The URR-27 usually mates with a URR-35 (225-399.0 nominal), though.

Forgot to list this stuff earlier. Was only on my first cup of coffee:

1. Homebrew HF amp running (3) 3-500Zs. No tubes or power supply. Needs new T/R relay installed which is included. Fully operational 80 to 10 meters. Never checked the WARC bands. has metering for grid and plate current in seperate meters. Designed to mount in a 19" rack.

$150 + UPS from San Diego 92139. Weight is about 50 pounds.

2. (2) Heathkit VTVMs. Model V-7A. One is fully operational and looks nice. other looks fair and needs work. Full set of leads (one set). Copy of manual. $35 for both. Buyer covers UPS on these from 92139.

3. The Taylor 572Bs I listed earlier are actually Penta Labs. Brand new. Checked to verify that they are okay and then put back in the box. $75 shipped for the pair.

The primary on the audio output tranformer on my NC109 has gone open.
What value tranformer should I use as a replacement? Any ideas on a source?

7748. AMECO SWR Bridge System - F.S.

I'm sure that if the EPA learns that some of us are opening our old tubes and allowing our vacuum to escape into the atmosphere, we will be required to purchase special equipment to capture the vacuum and recondition it or otherwise dispose of it in an environmentally safe manner.

Then EPA will prohibit the manufacture and sale of the old-style vacuum, and instead require us to purchase the new, environmentally friendly Vacuum 412 at 10X the cost that doesn't work as good as the old vacuum...

Have had to replace micas in TCS receivers that even though they checked good with all available testers.... did make for noisy RX. The oil/bathtub units were Ok but in the end I replaced the old mica units with new dipped silvers in RF ckts. Just my passing experience but a gruncha db noise difference. Hell, so you have to tweak a bit! The 1944 date stamped set got tracked and is on 40 CW almost every day.

<< a SX-100
(although it drifts a bit). The SX-100 is also kind of a "mini"
boatanchor - won't bust your table or your back. >>

I agree, I keep going back to an SX100 for general tuning around, the SX96 as well. I think the SP600 sounds good and is a reasonable AM performer but way too heavy, and my NC400 sounds really good but a bit hard to find. And I got to take issue with the 51s1 as a bad receiver - I use mine on 10 am alot, and it has a nice quality (as long as you don't have the AM mechanical filter) as does a 75s3a or c, which ain't quite GC but can cover a fair amount of broadcast when crystalled up right. Good Luck. Scott

I believe you are supposed to save the old vacuum. If everyone started opening up their old tubes now, there'd be too much vacuum in the air, and that can cause a lot of problems. You're supposed to have a container handy, to collect the old vacuum as it escapes. There are firms that will buy your old vacuum, and rejuvenate it. Indeed, this may explain the low cost of the vacuum that Jose is selling; it's not fresh vacuum, but merely rejuvenated. Be sure to read the fine print and check over the package if you insist on fresh vacuum.

The HA-600 seemed like a neat receiver, though I have none of the biases of actually owning one, and neither have I even seen one live.

But it must be a reasonable receiver if you can feel sentimental about it.

My first receiver, after playing around on the shortwave band on an old table radio that was around the house, was a Hallicrafters S-120A. Note the "A" because this was a transistorized receiver. I got it in 1971, and I think I paid $80 which was a lot for me since I was 11. As far as I'm concerned, it is thw world's worst shortwave receiver.

The thing overloaded tremendously. I remember copying out the parts list for a high pass filter (with cutoff just above the AM BCB) and taking it to the local electronic store. The price for the parts

was too much for me at the time, so I never built it. I doubt it would have fixed much, since the thing wasn't really shielded, and there was always TV and FM BCB signals to overload it.

The dial had terrible backlash. And of course each band covered a large frequency range, not making for accurate tuning. The best I could do was "close to 10MHz" or "closer to 9.5MHz". The ham bands of course were on miniscule bits of the dial. One turn would get you through each ham band.

Despite it's high sensitivity to overlaod, the thing lacked sensitivity. When I graduated to a Hammarlund SP-600 about a year later, I thought the thing was noisy because the S-120A was so quiet. The highest band, whatever to 30MHz, was even deader than the other bands.

But what was worst of all was that it wouldn't work on SSB. Despite the fact that I'd already decided to get a ham license. It must have lacked a product detector, and the BFO was way too weak. It worked on CW, if you could tolerate the awful tuning mechanism and the wide selectivity, but on SSB everything sounded distorted. I honestly can't remember whether I ultimately figured it out myself, or read something, but I came to realize that was too weak. I put a pot between the antenna and the antenna terminals to act as an RF control of sorts. That made things work fine, but unfortunately by the time the incoming signal was weak enough for the BFO to be sufficiently strong in comparison, only the strongest signals would get through.

The thing was a terrible disappointment. It was the cheapest receiver that I could get at the time, which of course explains its lack of performance. Of course, when I bought it I only knew about one, perhaps two, electronic stores, and had had no contact with any hams or knew of any local hamfests. Interestingly, I'd had a subscription to QST for about 3 months before I bought the S-120A, and already had a Handbook.

I remember in 1972, someone at the local code and theory course was going to buy a Hallicrafters S-125 which was a later (improved?) model, probably the last Hallicrafter receiver to come on the market. I warned him, but he fell into the same trap of it being the only thing affordable.

They don't make receivers like that anymore, thank goodness.

Of course, buying it was still quite a thrill. It came with a real manual, though only about ten pages long. I got a free set of headphones with it, the kind that had no padding and you clamped to your ears to use. It had all those markings on the dial, with places like Cairo and Antarctica, and transatlantic airplanes. Do those places ever seem exotic when youre 11 years old and anticipate hearing signals from there. And oddly enough, it was the first radio I could call my own, and I actually started

to listen to local broadcast stations and the music they played.

And yes, just about the only ham stations I could properly receive
were those guys on AM on 80Meters. They'd be on for hours every
night, and one would throw the transmit switch and stary transmitting
for a really long time, doing other things and incidentally talking
as they went. I'm sure I too realized they were young, yet they
also seemed to emulate that image of the grizzled oldtimer, either
intentionally or not. And I too was surprised to hear them still on
a decade ago.

Coincidentally, I notice that the latest issue of Consumer Report
is on the newsstand now, and it has an article rating the new breed
of vacuum. They say there is very little variation from company to
company, but they do note that people have had problems. They say
that in most cases, the problems arise from the user not following
the instructions properly. There wsa also a sidebar, I only glanced
at it, suggesting that these products need to be installed before
the end of the year, or they won't be effective. I didn't read
enough of it to see why that should be a factor.

I just realized that I have some vacuum variables that have lossed
their oomph, and I'm going to try some new vacuum on them.

My opinion, having had all three (and kept 3 L-4B's). The TL-922 is a dog! It looks nice but is a nightmare to work on. Arching and sparking are not unusual traits. Heath SB-220 is an OK amplifier. Very basic design. The 5.1 volt zeners in the bias circuit often go out and there is no direct replacement. However, a string of 1N4007's does the job. Also, it all depends who built the amp. This may be a pivotal issue. Some were done very well, others appear to have been built by monkeys...burned wires, flying leads, ad infinitum. One has to look carefully. Harbach (Melbourne FL) has some decent mods (albeit pricey) for the '220. Avoid the soft start mod, however. The relays are rated at about 1 amp!!! I had 2 of them literally melt down when one relay or the other failed!! Nice idea...poor (read: very very poor) components. The L-4B is also a "standard" design. Decent cooling provided. Some of the Harbach mods will work nicely in the Drake, too. Iron is readily available from Dahl (Heath, too). Very easy to work on. Nice to have separate P.S. Bias mod (emulating the Heath design) is recommended as the 3-500Z's originally idle at a fair amount of current. Parts rating in the final area are better than Heath and superior to the Kenwood (Old Sparkey!!). Again, my opinion (Ford vs. Chevy.... maybe??)

B Line Sataion for sale:

Very good condition. Cabinets show normal use with a few small scratches on side and top. Front panels are very good with no significant scratches. Main tuning knobs show wear on the inserts. Chassis are clean underneath and show normal discoloration on top. Electrically they are in very good shape and operate on all bands with full output into a dummy load. Price is PLUS packing and shipping. Prefer pick up in the St. louis area.

R-4B Receiver. All Ham band crystals. Original manual.
T-4XB Transmitter. Original Manual. Hand mic.
MS-4 Speaker.
AC-4 Power supply
Mating cables
Spare tube set (includes finals)

$600 for the entire station.

Johnson Viking II (thats 2) transmitter. Case is good but should be repainted. Front panel is good. Needs clean up to remove scotch tape residue. No major scratches. Former owner installed a spare 1/2" hole in the lower right of the panel. Covered with a chrome push plug. Electrically was good last time on air in 1998. Chassis is clean lower, dusty upper. Original Manual.

Johnson VFO 122. Case is average with surface scratches and some rub marks. Front is good. Cables are included to mate with Viking. Includes a manual copy.

Both units fully restorable. I just don't have the time.

$ 250 plus shipping from 63033. PICK UP preferred.

Chuck:
Having used 3 of the 4 you mentioned (L-4, L-4B, SM-220 and SB221) I've still got my L-4B's. Never used the Kenwood and have had mixed reports from friends who have them. The SB220/221 is a very basic amp. Depending on who assembled it, it could be a keeper or a nightmare. They both run HOT! Very wimpy cooling! Both Heathkits have problems in the power supply area. They were a tab wimpy to start with and they have aged by now. No RTTY or heavy CW without using an external fan. Easy to work on though.

My L-4 was a great amp. I traded it for an L4B to pick up a couple of the control improvements/enhancements. Cooling is via a hefty blower. I have an L4-B and an L-7 now. Plan to keep them both. The seperate Power Supply is great and the amps are easy to work on. If you do buy an L-4B, try and get one with the newer power supply. Drake updated the diodes and caps at some point and this mod is a good one.

You will need to look at the keying interface to the ICOM. The Sand State radios generally have a problem with the high relay switching voltage/current used on the older tube amps.

Hope you find an L-4B. You'll love it.

Hello all. I have I feel more than my share of leaking
alkaline batteries.
I have had the things leak in the packages and in my
equipment.
All have been stored at room temps and were unused. I could
see
dead ones leaking but stinking new ones? The worst offender
seems
to be Duracell followed by Eveready. I buy other brands (
Panasonic,
Ray-o-vac and some other off brands) and they seem to leak
MUCH less
frequently. I have a transistor tester that I use semi
frequently. The
batteries are less than a year old (Duracell), still good
and guess what?! Battery
nasty goo leaking out. How are you supposed to keep an
emergency
flashlight around? I remember how bad the old carbon-zinc
batteries
were about this , but here lately the alkalines seem to be
getting the same
reputation with me. I have seen the old " We will repair or
replace, at out
option any device damaged by this battery if sent with
batteries prepaid
to us. " Have any of you out there done this and what were
the results?

73

Randy KB8ASO Milan, In.

p.s. I am sending this to the rec.antiques.radio+phono also
as I am sure
they have seen their fair share of battery damage!

I have had the problem you speak of happen so rarely that it is
something not even to consider. Admittedly, when it does it seems like
a major problem or world crisis. Aboard ship we use untold hundereds of
alkaline cells in everything from emergency beacon lights on our

survival suits, flashlight, emergency use only flashlights that are mounted on the bulkhead next to doorways, radios, VOM's and the list goes on... over the years maybe only one or two in the bunch leaks or develops a crystalline mass on the bottom of the cell. My suggestion, use cheap flashlights that you can justify for throwing away (or be assured of getting replace by the battery manufacturer) like those 2D size yellow Ray-O-Vac jobs.

I 've been told in three separate instances where a consumer has had their flashlight replaced because of leaking cells.

Duracell sent me certificates with no hesitation on their part to replace a package (and get an extra one free) of cells that had a leaker.

My best experience has been with Ray-O-Vac cells. I don't bother with Duracell and Eveready since they put those battery testers on the side which makes them stick in certain flashlights. I do use Eveready for other applications however. Duracell can bite the big one since they are more expensive than the other brands where I shop.

7791. Gassy Tubes? Here's one explanation

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-12 00:00:00 UTC
From: wb0poz@prodigy.net
Message-ID: <830occ$89tg$1@newssvr03-int.news.prodigy.com>
Source record: 74815
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.audio.tubes

During a recent threat on rec.antiques.radio+phono regarding gassy tubes, I mentioned that I had recalled an article in Electric Radio magazine that stated that one cause of gassy tubes was leakage thru the pin seals. This was met with disbelief by at least one person, so in order to preserve what good name I have left I offer the following:

The original article by Bill Kleronomos, KD0HG, is in the November, 1993 issue of Electric Radio (copyrighted) and is entitled "Don't be Sorry - Condition Those Tubes". Here is essentially what the article says:

After years of disuse, a tube can experience thermal runaway due to gas molecules leaking from the pin seals. This manifests itself in reverse grid current, which in turn increases the plate current, which liberates more gas molecules from the metal structure of the tube, which increases grid current, etc., until the tube is destroyed, the fuse blows, or another component fails.

Bill states "I doubt that tube manufacturers of years past ever designed their products to maintain a vacuum for decades to start with! ...this is not as big a problem with Class C amplifiers with their extremely large amounts of applied bias, but it is in many Class A, AB, or B amp where a large resistance exists between the control grid and Cathode. The most suspected types seem to be bottles such as the 6146, 5894, 829B, and various audio types such as the 6550 and 6L6GC."

So what is the cure? Bill proposes setting up a jig to supply heater current and an adjustable source of B+, connecting a low value resistor between the cathode and control grid (about 1K ohms), connect screen and plate to B+ of 200-300V and bias the tube with a cathode resistor such that the tube idles at 1/4 the raded plate dissipation. Let the tube cook while observing the plate current, if all is well let it run overnight. If, after the end of this period, the getter is whitish or discolored there was a lot of gas and the tube should be used with caution.

Bill referenced the Radiotron Designers Handbook, which has this to say about the subject:

"If a valve has been on theshelf for a long time, it frequently shows a higher gas current but this may usually be reduced to normal by operating the valve under noirmal conditions with a low resistance connection between grid and cathode, for a short period." (Radiotron Designer's Handbook, 4th Edition, page 4).

Let the flames begin!

I've been using alkaline batteries for over 30 years, and I have _never_ seen an alkaline cell that "leaked" or had an odor. (I'm old enough to remember when the _only_ consumer batteries were zinc-carbon cells -- which are still made! -- and they _often_ leaked, severely corroding the equipment in which they were installed.)

The most-common problem with alkaline cells is the appearance of a white deposit on the negative terminal. This stuff often gets on the equipment contacts as well. If the contact contains copper, you might see a bluish-green deposit, too. These deposits can be cleaned with household ammonia, followed by a flush with isopropyl alcohol.

If your cells are leaking or giving off odors, you are most likely storing them incorrectly or "abusing" them in some way.

7794. testing 6AQ8 tube

I want to test a 6AQ8 (sub 6DT8) with my Heathkit TC-2 tester.
The tub isn't listed on the scroll or in the supplement test data sheet.
Any ideas?
Thanks in advance
Peter

EverReady did repair a flashlight which used a 6V lantern battery that leaked. Of course, this was in the mid 1950's! I still have the flashlight.

<edit>

I have never had any problems, in fact I have some Duracells
in one remote that are dated "Best if installed before Jul 94"
and are still working fine.
They are usually dated for about three
years shelf life, so these must be more than 8 years old.

Pulled some badly corroded cells from an 8 Track player the other day,
but they had been in there since the days of Disco!

Hi,

>The original article by Bill Kleronomos, KD0HG, is in the November, 1993
>issue of Electric Radio (copyrighted) and is entitled "Don't be Sorry -
>Condition Those Tubes". Here is essentially what the article says:

Unlike some of the contributors to Electric Radio, Bill Kleronomos
does know his stuff. Without looking it up, I recall he is chief
engineer for one of the Denver broadcast stations.

This clean-up procedure for residual gas has also been confirmed by
a former Raytheon tube engineer who posts to the Boatanchors list.

Hi, all,

I had the meter ruined in a Eico 256 VTVM. I know, it seems strange but the alkaline fumes from a leaking Eveready alkaline cell worked their way into the movement and desolved the aluminum pointer needle.

If you have a vintage portable with a repro battery pack beware!

Chaz :-)

>Peter.
>

The line set was used to calibrate the unit for a given line voltage, since
internal
voltage regulation was not used. The control fine tunes the internal
voltage
(similar to a variac), as you watch the set line on the meter.

Hi Floyd,

Cash is a little tight this Christmas season. However I will trade
something I have for them. What are you looking for? Maybe I have it?
I have some transmitting tubes and other types, telegraph sounders,
extra old QST's, radio stuff. I would like to get the old issues, now
that I am writing the Old Radio column for QST (starts in the Jan.
issue.)

Thanks for your consideration.

I would like to talk with anyone who has converted the older 3 hole Alpha amps running the 8874 tube to run a pair of 3CX800s or 4CX800s. I am considering doing the mod to the Alpha 374 since the 8874s are VERY pricey and the 3CX800s ARE available used at reasonable costs.

I recently had a set of AA Energizers leak in a radio that had been stored
for about 2 years. No damage done and it cleaned right up, but they
nonetheless leaked...

FA on eBay. Rare Hallicrafters PS-5 speaker. The PS-5 speaker looks like an "upside down" version of the more common R-47 speaker. 4" PM speaker in a compact steel case. 3.2 ohm, for voice frequencies only. The PS-5 has a bracket for hanging on a vehicle window and was for use with the HC-150.

I have always bought used 8874's for $100-$125. They are there. I just put a standing ad for them when I owned my Alpha's that way I could always buy at the best prices. Of course, I never hurt one so it turns out they weren't ever needed. I sold them all with the amp.

Somewhere along the way I was warned not to leave alkaline batteries in
a MagLite for long periods. I was told to remove them for a few seconds
every few weeks; something about slight outgassing plus aluminum sleeve
is all I remember.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

Hi John,

Talk about coincidence! I was sorting through my large box of tubes last week, looking for a pair of 6146's to fit in a Yaesu FT101ZD. These tubes had been stored away for something like 5 years. I found a half-dozen, three of them showed visible signs of gas,
the silver gettering on the inside of the glass envelope had gone quite milky around the edges.
The other three looked O.K. So I can definitely confirm your comments about the 6146
tubes.
Does this mean that I should junk these tubes? Would it be risky to use them, or would the process you describe rejuvenate them, or are they past it?

Best 73's

Selling my nice HT-37 that's been completely restored to top operating condition. New finals, all electrolytics and molded caps replaced. Correctly aligned and works great on CW and SSB. Includes new W7FG manual. Very clean, no chipped or cracked knobs. Front panel is very good, had some nicks which were touched up. Cabinet has been repainted using a basecoat/clearcoat lacquer. Color does not match original, but it's a very nice job. Will drive up to 250 miles from Raleigh, NC to deliver or meet you, or willing to ship at your expense. Properly packed, figure somewhere around 100 lbs. Sample UPS ground for a 500 mile shipment is $51. Insurance probably a buck or two more. I'll eat the packing cost. Selling only because I replaced the HT-37 on the operating desk with a 100V.

Well, feel free to slap me good if I'm wrong, because my expertise in the boatanchor area comes mostly from being a kid in the 1950s and taking lots of old (1930s-1950s) stuff apart.

Here's my guess:

It looks like a speaker enclosure from an old neighborhood movie theater sound system, from maybe the late 1940s? When these theaters were closing in bunches in the late 1950s (killed by television) they often sold all of the furnishings on the street. When I was a little fellow growing up in Southern California my father brought a couple of similar units home when a local movie house folded.

We had them up on our patio to pipe music from dad's "hifi" out to the BBQ area. Ours had the same speckled finish, except the color was So-Cal beige instead of green. Our units had the same "strangely out of proportion" size and shape, because (I think) they were designed to be up on a ceiling, some distance away from the audience. Ours had the original guts, which consisted of a line transformer, a capacitor and a 6" paper cone speaker. We refitted them with Allied Radio 6" "full range" speakers with whizzer cones, and junked the line transformer and capacitor.

That's my guess - hope you get some useful info.

I'm sure ya'll have heard of Glacier Girl, the P-38
being authenticly restored (including military radios!)
by the Lost Squadron from Middlesboro, Kentucky.

They are raffling a completely restored 1946 Piper Cub J-5A
to help raise funds. Tickets are $100 each and the drawing
is this spring.

If you'd like to help and get a shot at a nice airplane,
see:

I've had batteries leak from time to time, but it's always been after they had been left in the device for a considerable time after they'd discharged. When possible, I try not to leave batteries in something I won't be using for a long time (although it takes years for a fresh alkaline to self-discharge). When leakage does happen, I've found WD-40 to do a good job of stopping the corrosion.

Duncan - I'd throw 'em in a tester and check for gas. Otherwise use 'em at
your own risk! Remember that runaway plate current could damage your radio.
Then again there may not be a thing wrong with them, but milky getters are a
sign of trouble - either gas leaking in from a crack or something, or a
badly overheated tube.

I haven't looked at the page, but it seems to me that both folks could be right:

The seller could have the radio for sale with a low reserve. (say $150 to make up a number) meaning it could be a good deal, and biddwrs could have taken the price too high (in Ken's opi9nion, as stated below). In this case it appears that simply the Market values this radio more than either Ken or maybe even the seller estimated.

In short, if you follow the supplied link and it is obvious what the faults are with the radio, you are not "helping" anyone, since it is reasonable to assume that if you could see the problems, others will pick up on them as well. To use a favorite quote of mine "Thanks - if not for you the obvious would have gone unmentioned."

Do you feel obligated to walk into a car dealership and point out the "real" value of the card on their lots? Do you stop by yard sales and provide feedback on the real value of the "treasures" offered? Just curious...

Perhaps drag out the RCA Receiving tube manual and look at
which circuits got crossed in your SR-150 when you plugged
in the 12BY7A. This should lead you to what circuits
were damaged..

my $.02 :-)

One solution to alkaline battery problems is to replace them regularly. Normally that would cost a lot of money ... but what if you could get them free?

If you go to your local market or photo shop where they develop the use-once-then-throw-away cameras in-house you will discover that most of them toss the empty cameras in the trash.

If you ask nicely they will give them to you. Inside you will find two barely used alkaline AA cells. Dig a little deeper and you will also find a nice electrolytic cap!

Be careful as the cap will still hold a charge that can "bite" you real good! Also be careful because that charge will always fire the flash at the moment you have your eye about 2 inches from it!

Just F.Y.I., proceed at your own risk, YMMV, etc. 73, DavidC K1YP

I have an excellent condition SWR-121HF graphical antenna analyst. This
is the best way to see what your HF antenna system is doing.
The SWR-121HF features:
.Graphical display of SWR versus frequency from 1MHz to 31.999MHz.
.Compact battery powered for portability.
.Automatic SWR scaling for best results.
.Digital readout of SWR-at center frequency and top of plot.
.Display of return loss in dB.
.Keypad selection of center frequency and frequency increments.
.Auto battery-saver functions.
.Automatic centering of SWR null.
.RS-232 interface allows remote control, remote display, and saving
of plots (optional PC software available).
.Internal beeper provides audible indication of SWR.
.Self-test and calibration functions.
It includes the manual and a case. In excellent condition. $295 shipped.
73 Chris VE3NGW/W4 Florida

Way to go Bubba, Tune that sucker for MAX smoke! Whatya got now is a very expensive stink bomb...

OK OK relax... first of all which socket did you plug it into ? V2 or V4?

V2 is the Receiver AND Transmitter First Mixer. If you screwed this one - you won't get any receive audio OR transmitter RF output.

If it's V4 then that's the receivers second mixer. I'd be willing to bet thats the one you fried because you can still get some audio.

Whichever one it is - take your SR-150 schematic and work around that V2 or V4 section. Sounds like you replaced the resistors that turned crispy critter on you.

Well -STOP- right there...

Go to your SR-150 manual and find the trouble shooting section. There you will find diagrams (drawings to you) which show tube pin outs with resistances and voltages. Take the tube out and with a good VOM you check those resistances. Compare your readings to those of the manual. They should be within 20%.

Now unplug all tubes. Put a new fuse in the holder (a REAL fuse - not a silver gum wrapper) and add power. Now using your VOM - measure your voltages and compare them to the manual. Again 20% within the ballpark is OK.

NOW assuming you have not killed yourself, or burned you house down...

You can go to the schematic and trace down - by pin number - EXACTLY what's wrong. Remember CAPS can be OPEN or SHORTED and you can't tell by looking at them. Resistors can be SHORTED and you can smell/see it but sometimes they are OPEN and you can't tell either. Remove it from the circuit by clipping one end and test with with a VOM or Cap checker. If OK solder it right back in. Otherwise replace.

Don't EVEN THINK about putting those tubes back in until all the readings are like the manual.

What now? Ohhhhh jeeese you don't have a manual??? Pick one up at:

7872. Trade: Laptop computer for S-38

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-14 00:00:00 UTC
From: Rick Riverman <rbriver@home.com>
Message-ID: <fnk54.1915$BE.23883@news.rdc1.wa.home.com>
Source record: 74697

Will trade for Hallicrafters S-38 (original model with BFO adjust) in good condition.

Hardware:
* Toshiba T1000/SE Laptop Computer
* 8086 CPU, 640K RAM
* MSDOS 3.3 in ROM
* 2 MEG RAMDRIVE
* 1.44M Floppy
* Standard parallel printer port
* Standard serial port
* Good NiCd battery
* Battery Eliminator/Charger
* Manuals

Software:
* AutoMenu
* Microsoft Word for Dos
* SuperMorse 4.16 Code practice package
* Log-EQF QSO logging package

Older unit runs DOS only but great for ham logging, student or packet.
If you'd like, I can send a photo.

Thanks,
Rick

wb0poz@prodigy.net wrote in message
<830occ$89tg$1@newssvr03-int.news.prodigy.com>...

>"If a valve has been on theshelf for a long time, it frequently shows a
>higher gas current but this may usually be reduced to normal by operating
>the valve under noirmal conditions with a low resistance connection between
>grid and cathode, for a short period." (Radiotron Designer's Handbook, 4th
>Edition, page 4).

This may have been from the days when power tubes had tantalum or carbon
anodes. IIRC these materials will absorb gas when heated, and release
the gases slowly when sitting around.

I think most metals work the other way around, so heating a 6146 may
increase
the gas, not reduce it.

It woul dbe nice if somebody would test this theory with some gassy tubes
of both kinds..... Anybody got some?

7885. Drake 2C+2CQ+2NT Complete Station FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-14 00:00:00 UTC
From: Bruce E Stock <stockb@accessone.com>
Message-ID: <38568972.53A0@accessone.com>
Source record: 74710
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This complete station is in very good cosmetic and electrical condition. It was recently cleaned, aligned and weak tubes were replaced. See it at: http://www.accessone.com/~stockb/radios/DrakeStation.JPG

2C: The receiver comes with the 2-AC calibrator and 2-NB noise blanker. It has good sensitivity on all 5 bands. There is some corrosion on the chassis, but external cosmetics are very good. See at: http://www.accessone.com/~stockb/radios/2C_Inside1.JPG

2NT: The transmitter is in very good physical condition. 70-75W output on all 5 bands. Near-pristine chassis. See at: http://www.accessone.com/~stockb/radios/2NT_Inside.jpg

2CQ: The Speaker/Qmultiplier cosmetics are good but not as good as the above. A light overspray will bring the case up to very good appearance, but I have left everything original.

Complete system, plus interconnecting cables, Receiver manual copy and Transmitter manual partial copy: $280 plus shipping from 98144 MO or certified funds only.

I'll also consider trades, particularly for an NC-303, but may consider other BA's from the '58 - '70 time frame.

I have a working Collins 51-J4 that is in good condition that I would like to part with. It has been sitting in an unused condition for years and is still the original OD color. It receives well. Serial number is in the low 36XX range.

Since I don't know what the boatanchors are selling for I would need a site or direction to a site that has Collins equipment listed. Since this is probably a late 1940's or early 50's receiver I am not sure if a price listing exists.. Looks to be a WWII vintage unit.

.jpg photos available upon request.

Help needed... collectors etc.

Thanks,
Don KC6WNN

I have a complete Johnson RF Amplifier less the two 4-400s. This would make a great spare, or can be matched up to a PS and be a nice heavy duty HF Amp or it can be a start to collecting the parts to put together your Desktop KW. It uses a very large Roller and a very large variable. There are no modifications and condition is good. It has some blemishes in the paint that might clean out or it can be re-silked This was taken out of a working desktop that was parted out. JPGs available on request. Only $400 shipped. 73 Chris VE3NGW/W4 Florida

Can I buy your Drake station? I may have an NC-300 to trade, but I'm not sure of it's condition without looking at it.

Regardless, I would love to own the Drake station.

Thank you,

Jim:

Try cleaning the friction drive wheels with a good degreasing agent.
Any oil or grease on the wheels will cause slipping. Be careful with
the springs, you shouldn't have to bend them.

> the method of adjusting this friction drive?

Just to reiterate ... you should not have to bend anything. Unless you have a broken spring, the key to slipless functioning of the SP-600 dial drive is squeaky-cleanliness of the friction roller and the edge of the driven dial. Use a degreaser (or just good old soap and water) with a final wipe of alcohol on the edge of the dial and in the groove of the friction roller.

SPARING use of a high quality synthetic lubricant (like Mobile 1 Synthetic Gear Lubricant) on moving parts other than the friction drive itself will help keep things operating smoothly.

The boss wants to get rid of some brand new, removed from equipment
transformers.

Two sizes available: 350 VA and 75 VA.

All are 480/240 primary and 120 secondary. All have at least a
secondary fuse block and fuse. Some have primary fuse blocks and fuses
as well. These are all AB branded machine tool transformers. Some are
labeled 60 Hz, some 50/60 Hz.

The boss said get rid of them so heres the deal:

350VA unit - $20
75 VA unit - $15

There are a whole pile of them available (like maybe 50).

Can be picked up in Loves Park, IL or shipped via UPS or truck freight.

Contact: Petersonra@aol.com

If you want the whole lot of them, make an offer the boss will accept
and their yours.

I hope you find one.. I had three of them, and crystalled them
all up for 80 and 40 meters back in the mid 1980's .. great
radios.. wish I never had parted with them..

As I remember they draw like 40-50 ma on receive .. all solid
state receiver and designed for low current drain in order
to maximize battery useage..

Hi all,

recently I got a pile of very cheap tubes. Amongst them were two *ballast tubes*.
The type number is D5TF30. They look like 9-pin miniature tubes from the outside. Inside there are only wires separated by five isolating disks.
I don't have a clue what these tubes are normally used for. Can anyone help me?

I don't have access to the spec's, Udo, but ballast tubes are basically incandescent lamps used to regulate current; as the curent increases, so does their resistance. Sometimes real lamps can be used; the R274A (Hallicrafters SX73) used two 7 watt, 120 volt lamps, as I recall, to regulate oscillator filament current.

Very rare Hammarlund HC-10 receiver SSB adapter, serial # 923, circa 1958. I have only seen one other in 40 years. This one is Collins-scale EXCELLENT+++, with slot filter, passband tuning, noise limiter, squelch, variable AVC, and original factory manual. Use with any receiver having 455kc IF. Truly beautiful condition. $545 + shipping firm, no trades. Tks es 73!

Gents,
For those of you running the Ten Tec Titan I:

1. What is the plate current for 1500 watts output?
2. Grid current for same?
3. What is the idling plate voltage?
4. Drive level needed for same output?

Any info greatly appreciated.

This is the older 3 hole (stock, not a conversion) Alpha 374. Runs three 8874/3CX400A7 tubes. 80 to 10 meters in manual tune or bandpass/no tune mode. All three tubes are Eimac and in like new condx. With 50 watts of drive I get 1050-1100 out on all bands with the plate current at about 750 mA. Each tube is rated at 350mA of plate current keydown. Have not ever used it on 12 meters. Front panel is very nice and cabinet is very good also. If you want an amp that will run a full kilowatt out 24/7 this is the one.

Price is $1050 with buyer paying shipping on 60 pounds from San Diego 92139. Will double box the amp and the tubes and ship seperately. With manual.

Will consider a trade + cash on a smaller amp (possibly).

7946. FS: Beautiful Hammarlund S-200 Speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-15 00:00:00 UTC
From: Jan Robbins <swanman@cfu.net>
Message-ID: <385869A1.1C9C12C8@cfu.net>
Source record: 74675
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have for sale what is easily the BEST Hammarlund S-200 speaker I have seen since they were new in the late 1950's and early '60's. I am selling it only because I do not need it; my collection is going in another direction.

If you are not familiar with the S-200, it is a perfect match for the Hammarlund HQ-100/110/145/160/170/180 series of receivers. Its cabinet and trim ring (all metal, not plastic) are the same as on those receivers. The front is covered in matching gray cloth with fine, abstract silver line tracings, a design typical of the late 1950's and early '60's.. At lower left of front is the traditional circular Hammarlund "Arrow-H" logo. The speaker measures 11"hx12"wx9"d.

This one you could display in your living room with pride. It is in Collins-scale EXCELLENT+++ condition. Cabinet and trim ring are without serious scrapes or mars--a little buffing will make them look like new. More importantly, the fabric front is not stained, discolored by tobacco (no evidence of that ugly weed), torn or marred in any way. The Hammarlund logo at lower right is in place and nearly perfect. Of course, the speaker works perfectly, and will work with virtually any receiver from the 1950's to today.

I will sell this speaker for $145 firm + shipping, no trades. If you want one for your rig that you can show off and be proud of, this is it. It is sitting next to my R-390A now, and I wouldn't let it go if I didn't have an as-new LS-474--the original matching military speaker for that receiver--to replace it. Let me know if you can use the S-200. Tks es 73!

I have recently had a leak of 4 D-cell energizer batteries into my Mag light. I called them and they told me to send them the flashlight and batteries. I will do so as soon as possible. I have never had alkilines leak into anything that I have owned until now. I remember the carbon-zinc batteries leaking all the time. I had a hell of a time getting those batteries out of the light.

Source record: 74740

Hi Fellas;
I have for SALE:
Almost mint TT Omni VI(not +)with matching speaker supply. Included is a
1.8 SSB filter option. This is off the top of my head and can supply actual
Model numbers or S/N's later!
Am assuming this because when I press 1.8, you can hear it narrow down a bit.
Only problem is that there is about a 5-7 watt carrier on LSB only. I am not
a tech and have not even attempted to adjust this as I am sure it can be. I
do not have any paperwork.
Price is $1400+ UPS Conus.
A great deal! I wish I cud keep it myself but the holidays have taken a toll
on my funds!
Thanks es 73....Rich WA2RQY (1961)

I just bought a Hallicrafters SX-101A, a receiver from my novice days.
My original transmitter was a Knight-Kit DX-60B and a Heathkit HG-10
VFO.

I was wondering what SSB transmitters would have been typically used
with this receiver?

Hallicrafters HT-32 ?
E.F. Johnson Viking Invader ?
Collins ?
Globe ?
Gonset ?
etc. ?

What is the typical price range for these transmitters in GOOD working
condition to collectors quality.

Many thanks in advance.

Dennis WB3KUM/9

This FL-2100 runs 700 watts out with 500mA of plate current and a loaded plate voltage of 2100 volts. Idle plate voltage is around 2450vdc. This amp covers 80 to 10 including WARC but solid state rigs will need the autotuner if using the WARC bands. Looks great and works even better. American made 572Bs are Cetrons and very new. 120 vac or 240 vac primary. Needs about 70 watts for 700 out. With manual. Will double box amp and tubes and ship seperately via UPS. Buyer pays shipping costs on 42 pounds from San Diego 92139. If you do not need an amp for 160 and want to run a solid 700 watts then this amp is for you. Really works great.

$350 + UPS charges.

7991. WTB Tuning Knob skirt for SX28 Hallicrafters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-16 00:00:00 UTC
From: Bonita Lee Geniac <bgen@wdl.net>
Message-ID: <38597A81.BA3F1FEA@wdl.net>
Source record: 74623

Hi, I just picked up a very clean SX28, and it is even working, with intentions of restoring it. Unfortunately the skirt behind the large tuning knob has been removed, and the part which mouted to the panel just below that knob-I am guessing it might have been a lock? There are two machine screw holes that mounted this missing part to the panel. If anyone has these parts or knows where I might try to locate them, I would appreciate it. Thanks.

7992. Flexar Info Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-16 00:00:00 UTC

Gents,
With all these amp parts lying around and with the potential sale of my Alpha 374 I am looking at homebrewing a pair of 3CX800A7s.

The Eimac spec sheets state a maximum of 2500 volts on the plate. My supply's lowest tap is at 2900 vdc at 500mA ccs. Is this dangerous to the tube to run the plate this high? I know with 3-500Zs many amps run the plates at 3800 to 4400 depending on the maker even though Eimac stated max Ep was 4kvdc. Tube worked fine and lasted a long time. The newer triodes such as the 8874 and 3cx800 are very new to me and I do not know if they are rugged like the 3-500 and 572B in regards to plate potentials.

So is 2900 too much? Looking for voices of experience here.

I have a Knight Kit T60 that seems to go into oscillation during key-up.

Have you had this kind of problem with yours?? does it need to
be neutralized in some manner??

I works fine into a dummy load, but when I put it on an antenna,
during key-up, the thing will still show RF output.. looks like
an RF-feedback problem..

perhaps you or another T60 guru can tell me if you have
found a specific fix other than perhaps a neutralization
adjustment..

Trish

HT 32 for the affluent, HT 37 for us common people. Johnson Pacemaker for SSB, or Viking Valiant for AM; Globe went directly to transceivers for SSB under the Galaxy name, but for AM a Globe King would have been a match, and a Collins 32S1 for a real mis-match. Collins 32V3 was a little early for the SX 101. Lots of other minor players, a perusal of a contemporary ARRL Handbook advertising section, and the ads in CQ and QST at the time would provide the widest selection. As for current price, $10 to $1,000, depending.

8001. OEM "T" power connectors and Anderson Powerpoles

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-16 00:00:00 UTC
From: Ken Mirabella <kjm@flo-bin.com>
Message-ID: <UDk64.1547$ae4.78469@typhoon-la.pbi.net>
Source record: 74633

Subject: OEM "T" power connectors and Anderson Powerpoles

I have started a new web site to sell the hard to find and "elusive"
Anderson Powerpole connectors that have become (or are becoming) the most
popular power connector for interchangeability in the emergency community
and Yaesu, Kenwood and Icom mobile OEM "T" power connectors.

www.powerwerx.com was started with the hearing the concerns of hams across
the country in newsgroups of where to purchase these connectors and other
"hard to find" products at reasonable prices.

PowerWerx.com encourages groups to pool their purchases to obtain a very low
price on power connectors.

I apologize for the commercial promotion, but I feel that an on-line secure
source for these products has not been available for quite some time.

We accept MasterCard/Visa.

The philosophy of "hams helping hams" is now extended from my web site to
you.

Ken, KM6YH
owner of www.powerwerx.com

8002. FS: Swan 1500Z HF amp $425 shipped

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-16 00:00:00 UTC
From: Lane Zeitler Ku7i <Ku7i@worldnet.att.net>
Message-ID: <83clr1$65o$1@bgtnsc02.worldnet.att.net>
Source record: 74634

Swan model 1500Z HF amp. Covers 80 to 10 including 17 and 12 at full output. Tuned input also works very well on 17 and 12 (low Q design). Front panel metering for plate voltage, plate current, or relative power output. Front panel operate/bypass switch. With 70 watts of drive will deliver 700 watts out with about 600mA of plate current and the plate voltage at abt 1800 under full load. idle plate voltage is 2150vdc. Swan designed this to run a lower plate voltage than we usually see in 572B amps. Uses American 572B tubes that are 100% full emission. Amp is 100% operational in all respects and you will like the way it is built. Comes with copy of manual.

$425 shipped lower 48.

9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

8013. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <83a44f$74e$1@news.hawaii.edu>
Source record: 74692
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

help
> > me?

many thanks to you and all the others who replied to my question. Things are
much clearer to me now and I know that these tubes are of real value and
must not be thrown away ;-).
I am very impressed about the many answers and the help I received. This is
a wonderful medium!

vy 73s and merry Christmas

8016. Surplus dispoosal changes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-17 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19991217091706.03049.00000023@ng-fh1.aol.com>
Source record: 74545

The Battle Creek, MI office of the Defense Reutilization and Marketing service has sent out a Request for Technical Proposals to change either the chosen exclusive distributor of military surplus, or change the entire procedure (I'm not so good at deciphering Govt. goblydook). In any event, the winning bidder would get a 7-year exclusive contract to acquire and then resell all military surplus from a list of DRMOs in the Continental US (about 62 locations in all).

Unless the surplused supplies are diverted for RTD (reutilization/transfer/donation) this new vendor will have sole rights to determine the disposition of all goods,

The procedure is to base the cost at a percentage of original procurement cost, and then resell it at a profit. After expenses are deducted, the feds would get 80% and the contractor keeps 20% (plus "expenses", of course---think toilet seats).

The entry barriers are steep, a million dollar bond, a previous five year accountants' report, etc. The only concession is that the bond could be replaced with $500K in cash. (Of course the bond could be in the form of 2000 R-390s based on the average E-Bay prices, so this is not a big hurdle--- :>)).

Tobbyhanna, St. Juliens, Vandenburg and other bases will all be sending their surplus to this new contractor; we can only hope they don't have strong ties to the scrap metal industry.

The RFTP is now being circulated in draft form (I have the Oct 99 version), with the RFTP number 99-0001.

Make no mistake, this will really affect what trickles out into the electronics surplus market.

Matt

I don't know where you got your infomation but D.R.M.S. has already contracted out the disposal goods to Levy-Leatham. They had to put up $1,000,000 to get the contract. Check them out here:
http://www.levylatham.com

I believe this was a 5 or 10 year contract.

Hey Trish - I can help but need more info about your problem...

Does it do it on all bands? Does it do it without an XTAL in the socket?
Are there multiple resonance points on the final plate (Tune) control?

It could be the final self oscillating or backwave from the oscillator
itself.

T-60 is pretty good little TX. I'm getting mine ready for straight key
night on 40. What a wonderful way to start Y2K !!!

The concern is an Anode to Grid short (arc or flash over). The ceramic insulator spacing on a 3CX-800A7 is spec'ed at 5000 V. The RF potential can approach twice the DC voltage. A better choice of tube, at the higher voltages, is the 3CPX-800A7. This "pulse rated" version is electrically identical, but has a larger ceramic insulator spacing which is spec'ed at 7500 V.

Actually it was a pretty smart ass remark. I have since apologized to Peter and have helped him via email. Who am I to pass judgement? I have done some pretty stupid and dangerous stunts with electrons in the past. I am still surprised I am still alive...

Anyway, It is always a good idea to record your resistances and voltages in the manual while the rig is actually working so when it stops working - the problem is easier to find.

By the way the SR-150 and 160's are most excellent rigs!!! I have a lot of respect for Mr. Halligan. He gave ol man Collins a run for his money... -B

Hi,
I would estimate about $250 to 350. But who knows in crazy e-bay auction?

The speaker alone is fetching $100 in good condx so lousy cosmetically would be about $60. I'd say at least $400 for the pair.

Source record: 74637

The grace period for renewal of all classes of amateur license is 2
years form the expiration date. Thereafter, renewal is not possible.

As this is written, there is limited written credit available to those
who held a Technician class license prior to 03/21/1987. Also limited
CW credit is available for those who held a Technician class license
prior to 02/14/1991. Individuals who wish to claim this credit DO NOT
have to show proof of continuous licensure - only that they held the
license. It is unknown whether or not this credit will continue to be
available after license restructuring. For further details, contact the
ARRL VEC department in Newington, Connecticut. The phone number is
(860) 594-0300. Or e-mail to w1ki@arrl,org

73,

Wayne K. Irwin, W1KI
Assistant to the ARRL VEC Manager

Source record: 74638

Hello Fellow AM'rs

I now have the Valiant silkscreen setup to refinish your cabinet & panel. My "new" Valiants I'm rebuilding are looking great. I will refinish your Valiant cab set for $285.
I am still doing the Ranger-1 cab set for $250. This includes your panel, bezel, cab, & crystal knob. Oh, and I can do just the Valiant panel set (you do ur own cab) for $210. Ranger-1 panel set for $195. (all + shipping).

Sorry I dont do Ranger-ll's.

I will have several rebuilt Valiants for sale, plug & run. One will be factory stock overhauled complete. The others will be modified (w / the "Valiant sound" cured) & the hv power supply w / solid state tubesters & more. But note: these cant be shipped. I can travel to meet you within a reasonable distance or you PU @ my shop in the Shenandoah Valley of Virginia.

I have a suggestion on payment on the panels or Valiants. I will take trades towards the cost of service. I am looking for other rebuildable Valiants, Rangers, ...RAILROAD GRADE POCKET WATCHES, CERTAIN CLOCKS, & certain wrist watches. Yep, I used to be a collector of them also.

Warm regards
Dee, W4PNT

I stand corrected, it was a T-60. Sorry, it been a few years. Only had one problem, something popped and the final went. Replace cathode resistor and tube and no more problems.

Later replaced with the pretocessors to the Kenwood Twins, the T and JR-399. Then the T and R-599, still have. As typical, I collected a few more sense then.

Thanks for the info. Will monitor for future purchase.

All vacuum tubes were Glass on the inside. Otherwise they could not be evacuated. Metal tubes were needed in rough wear situations such as mobile equipment and military. The shield in some cases is the metal part of the tube. G types and GT types should perform identically in most applications. The Radiotron designer's handbook" has lots of info on thisRegards David Quinlan.

Any info on a just pre WW2 transmitter called TBS5? Some say it stood
for "Talk between ships" but this is disputed. The transmitter was made
about 1939 and has a pair of 807's in push pull. It is a 'phone set and
also contains a pair of 0808's. as modulators. The first i have ever
seen. All connections to the chassis are on a long phenolic strip
containing lots of Bannana plug females to the power etc. It' seems to me
to be in good condition but without the schematic I'm reluctant to dig
into it. Rig is Xtal controlled with a big rock and sends
around 30mHz by my guess. I'd like to see a schematic of the thing as it
is all cabled and wrapped and i don't want to take it apart..REgards

Hi Scott,
I restored a 3 years ago. Electrically, the radios are very simple. The only problem I had as I recall was properly cleaning the bandswitch and then aligning the wafers on the bandswitch so the rotor made proper contact in all band positions.

The symbol for the solid-state diode actually came
from the days of the catwisker sticking into the galena
crystal..

8054. NC-183D on eBay

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-18 00:00:00 UTC
From: Bob Maser <w6tr@mindspring.com>
Message-ID: <83hnoc$38q$1@nntp9.atl.mindspring.net>
Source record: 74504

I have just witnessed the ultimate in inflated prices on eBay. item # 218823020, a nice looking NC-183D, with no description nor views of the interior or its functional performance, just sold for $796! The seller, who is a ham, advertised it like he really didn't know what it was, which seems to be very common these days. Up until now, I have been taking heat from the old lady for spending $500 on a HRO60, I feel better now that I've found bigger idiots than me.

It's beautiful.

$1,602? That's nothing to a well endowed museum -- or collection.

Last spring I saw several WWII Japanese trench radios in mint condition. It struck me that they belonged in a museum, and money spent in acquiring them would be money well spent.

Isn't there a Perham (?) Museum in California known for their collection?

Very believable. Several months ago the same model with a Marconi tag (apparently a demonstration model built in an attempt to procure a contract) sold on Ebay for thousands. More recently a Deforest model sold for a price similar to the General Radio receiver bid and at present a Liberty electric model is bid up to a similar amount (search for signal corps radio).

8065. WHAT IS AN HRO-50-T WORTH?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-18 00:00:00 UTC
From: Richard Williams <richard.a.williams@attcanada.net>
Message-ID: <VJC64.10382$j%2.789@cabot.ops.attcanada.net>
Source record: 74565

I have been toying with selling my HRO-50-T, with wooden box, original manual and matching speaker. The 50 is as close
to mint as I've seen in a boatanchor. There are a couple of light scratches (not through the paint) on the top and sides, but the front is perfect. Strangely, there is a quarter inch diameter paint chip missing at the front corners of the lid. The metal is dimpled and it really looks like a manufacturing defect. I have coils A, B, C and D. The speaker was stored face down and
the front is quite rough. It works fine though. The 50 was aligned last year. Any idea what this is worth? I'm not looking for
offers, just approximate value. Thanks de Rick VE9HF.

For sale: a Gonset GSB-101 linear in excellent condition.
All original except that the T/R relay has been modified for modern
transceive operation (bypasses amp for receive in standby postision).

The unit uses four 811A tubes with an RF output of 600 - 800 watts,
depending on loading and how hard you want to work the tubes.
Cosmetics are very good to excellent.

I'd rather not ship the unit due to its heavy weight. Asking $250.
I'll include some spare 811A's.

My QTH is in Connecticut.

73,
Doug/WA1TUT

Well I don't know what's going on but in November my employer got a 150 page package which looks like it's going out on bid again. The package was dated 10/99.
It also included the financial data from LeveLAtham reports.
There are quotas in the proposed contract, with an option to get out. Maybe their cotract is being terminated?
The Battle Creek office has the package available to potential bidders. Why not get one?

Source record: 74586
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I have a near mint Drake TR4 Station that consists of the TR4C Transceiver, RV4 Remote VFO and the AC4, all in very close to mint condition, with one minor exception. A previous owner of the RV4 made a splice in the interconnection cable, which in absolutely no way affects connection, appearance or operation. I could replace the cable and in effect, remove the flaw, but there is no reason to do so. I have the original manual for the TR4C, which has documentation for the RV4 series VFO and the AC4.

I have been using this station for some time and can honestly say, this is one of the best Drake TR4 systems I have ever seen (been actively hamming for almost 45 years). The reciever sensitivity is excellent and my audio signal reports have always been excellent.

I am looking for a Kenwood TS-830 or a Yaesu FT-102 in excellent condition for an even swap.

Please email me at sam@ab4n.com

Thanks for reading and have a wonderful holiday season.

Hi,

I have one EEV (English Electric Valves) C1111 valve for sale. This is the same as 715C by WE and very close to the 5D21. A very powerful pulse tetrode, but can be used in audio, too. The valve is in its original packing and unused. Very nice and in mint condition. Top quality.
Best offer.

Regards,

Arnold Goks�yr

Hi there.
i own a FURUNO FS-1562 for the last 4 days.
as far as i see there are only the standard ITU channels preprogrammed in memory.

1. Is there any way that i will unlock the above equipment in order to RX and TX wherever i want too?

2. Is it possible to convert it in order to work also at LSB?

Please if someone knows something about it it will really help me
thanks all
chris

Good answers, but the Ebay seller didn't describe the radio as being "solid-state." He correctly identified it as a, "BC-14A Crystal Receiver."

8100. Drake TR-7 Help Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-19 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <83j73q$2p3$1@nntp3.atl.mindspring.net>
Source record: 74450

Hi,

I am the proud owner of a TR-7 that was the "parts rig" of a SK's estate. The rig had been stored in a shed for the past few months. I cleaned all the plug in connectors and
reflowed a lot of solder joints before putting it back together. VCO board, DR-7 board and others had been pulled with notes attached about 97MHz appearing on the display and frequency drift. Those problems went away when the boards were reinstalled and making good contact. You can't imagine my suprise when I realized I just received a TR-7 with the aux-7 board, dr7 general coverage display board, 3 filters installed in filter board and fan option. The rig looks nearly immaculate when I cleaned it up.

Now for the help part. When I change bands, the display stays on the previous band and frequency. The receive signal is still the one tuned on the previous band, and the signal only suffers slightly. However, when I turn the rig off and then back on, or if I turn the switch controlling the aux 7 to one of the positions and back off again, the band changes to the one selected by the band switch and the display and receiver follow.

Any ideas? I have checked the blue pulse wire, and found nothing there when changing
bands. The schematic leads me to believe it should receive a break in the path to ground when the band selector is switched to another band.??? How would this supply the logic to the DR7 indicating which band had been selected?

Any Help Appreciated

David

Thanks.....Mark

8102. Re: metal Vs. glass tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-19 00:00:00 UTC
From: CommQuart <commquart@erols.com>
Message-ID: <83j8m2$31q$1@bob.news.rcn.net>
Source record: 74452
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

The metal tubes are RCA tubes--they developed this series.

Metal tubes and their glass counterparts are NOT always directly
interchangable!!!
The metal tubes use pin 1 as a ground tie point--in some cases the
suppressor grid
may be rerouted to pin one (in the glass version in may be tied to the
cathode pin---this
was recently discussed on the rec.antique.radio+phono forum). Also,
because pin one
is not used in the glass tube versions, some sets may use pin 1 on the
socket as a tie point.
If that happens to be at high potential B+ and you plug a metal tube in, you
could get quite
a surprise when you grab the tube and chassis at the same time.

Besides interelectrode capacitances, shielding is another critical
concern--some sets designed for
metal tubes will oscillate if glass tubes are used in RF or IF stages.
Regarding the SX-28, the oscillator
tube must be metal, otherwise you may find it very hard to align on the
upper HF ranges.

G and GT are interchangable so long as they are physically compatible (will
fit physically).

Use what the designer called for, there is a difference! You might get away
with 6H6 or 6J5s in detector
or audio stages, but otherwise be careful.

Pete

Does anyone have any experience converting Commercial Radio microphones over to amateur use?

I have both a G.E. mobile mic and a G.E. (made by Shure) desk mic, that both have unshielded wire (strange) and the mobile G.E. has some sort of single stage pre-amp.... Or maybe it is the power supply for a condenser mic? Not sure.

Can anyone advise?

It's getting old driving around talking with a Shure 444 on my HF rig! He he!

Thanks chums

From: "David B. Rogers" <dr7zyq@nidlink.com>
Message-ID: <385D7205.7532@nidlink.com>
Source record: 74465

For Sale:

General Radio Company Impedance Bridge, Model 1650A

It measures resistance, capacitance and inductance.

It looks good, in the case (no cover), missing case screws. The manual is dated 1967 -- this in not WWII vintage.

I was told that it worked when I bought it, but have never gotten around to trying it (that's why I am selling it).

Has original manual plus condensed operating instructions. Manual has operating as well as service and maintenance info.

Tucker gets $450.00 for these refurbished.

I figure mine ought to be worth $75.00 to someone. Add UPS shipping from 83861.

Thanks and best thoughts of the season to all,

David, WA7ZYQ

in all my years of servicing radios in the 50s and 60s i never had a problem..
that is using glass for metal and vice versa..
i think that most design engineers were careful and made them interchangeable..
as far as performance the ear couldn't tell..
i'd be interested in hearing about specigic cases where what i said doesn't
work..

One example is the SX-28 which uses a 6SA7 HFO. The differences between the 12SA7 and 12SA7 pinouts (8BD vs. 8R base) were discussed on this newsgroup (RAR+P)
a month or so back.

Substituting a glass 6SA7 in the SX28 will cause alignment problems. This was mentioned
on the boatanchors newsgroup some time back if I remember correctly, or I may have run
across the information on a Hallicrafters collector website. Maybe another reader can amplify
on this...

Some others on the RAR+P have reported oscillation problems when substituting glass
tubes in RCA sets. When I was a lot younger, I almost got electrocuted while attempting to plug a
metal 6L6 in lieu of a 6L6GC in an audio amplifier.

Hallicrafters experts:
I occasionally talk to YS9YS, and he is looking for what he describes as a cogged belt for the band change mechanism in his Hallicrafters FPM-100. If anyone can direct me to a source, I will pass the information to him. Apparently there is no information on the belt in his instruction manual. Please, I need a source for this specific item, as I have no way to describe it to an industrial belt dealer.

Thanks in advance, and Seasons Greetings to everyone.

Message-ID: <83kboj$909$1@bgtnsc02.worldnet.att.net>
Source record: 74471

I am asking this question for a person who use to have a Ham-operator in the family.

It is a Hallicrafters SX-140. It has a matching speaker unit.

The frequencies are: 3.5, 7., 14., 21., 28., and 50. Phone jack.

Is in good working condition. Actually looks pretty good too.

Any idea what range of dollars it might be worth?

thanks ------- if e-mail ---- respond to johnrayhilljr@worldnet.att.net

From: bg998@FreeNet.Carleton.CA
Message-ID: <83hakjbvg1@freenet9.carleton.ca>
Source record: 74514

Fellows,

What is a 2AS15A vacuum tube anyway?

It looks like a high voltage diode but must be very low current. I have not been able to find it in any of my tube manuals (RCA and GE) or any of my old amateur radio Handbooks. Can someone tell me what it is and give me some specifications??

Thanks very much.

YUP! Some of *my* first radios, back in the 40's, were ALSO "solid state" crystal sets... Seems that some of our newer hams education is lacking in old radio technology, and also on exactly what transistors are made of...

Merry Christmas everyone,

I am looking for the following if anyone has one available:

RAS-4 (or in the series) speaker (rack mt)
RAS-4 (or in the series) table top frame (about 30" high)
(must have RAS equipment tags and be in good condx or else
more or less looking for good home).

TU-26 tuning unit covering 160m or any other
rack mount antenna coupler covering 160 meters.

10" round, high Q speaker, Jensen or equiv. Prefer 4 ohms.

AN/FRT-4 transmitter. If for sale, must be immaculate, if free,
must be within 2000 miles of Gulf Coast.

WInged emblem Collins rack cabinet, 7 foot; relay or closed type.

Collins model 26-W audio limiter or 212-G mixer.

HV Power supply for the Chippewa (Heath KL-1). This is a
doghouse supply (outboard slave).

Have the following to work with in trade towards one or more
of these items:

Scott RCH, original with original manual, cabinet, shock mount
(receiver, anti-radiation type)

Hammarlund HQ-140X, cabinet, not bad at all, two of the small
knobs are not original.

National NC-300 with matching speaker having VHF converters

National NC-180 with matching speaker

R-1051-B, powers up but does not receive. I understand the KHZ
module is out of sync. Out of my skill range.

R-390-A, powers up; received signals until ballast went out (I
made the mistake of wiggling it during a tube check :-(.

Drake 4 line pieces

Heath SB-200, almost like new.

Plenty model 28 KSR's

etc. etc.

Source record: 74536

I have had 6 183D's pass through my hands and there has not been one without bandswitch and cap or transformer problems. One without a scratch and it was full of problems. They fix up nice but high band performance is always a problem. A nice face can hide a bad radio when it is a National. Good luck to the gent with the nice face 800.00 radio. And that seller sold me an HRO-60 once that was performing "perfect" After 9 bench hours it was !!

Would you happen to have the freq. counter that matches the
Ft101E series rigs? Working or non-working? I think it was
called the YC-601 or something like that.
Let me know if you have one for sale, working or not.
Thanks!
Mike

Anyone want to trade their TR-relay for a Motorola Expo HT? The
HT is former Navy shore patrol property, crystalled at 138 MHz.

In article <385E2F70.82C837CB@blazenet.net>,
Robert A. Poff <wb3awj@blazenet.net> wrote:
>"Blaming guns for Columbine is like blaming
>spoons for Rosie O'Donnell being fat."

Then I suppose you wouldn't mind having SAMs and nuclear weapons
available as over-the-counter products?

In Hawaii I'm proposing that the name and address of every gun
owner be available on the web. It would be nice to know which
neighbors and fellow employees have chosen to belong to our
Second Amendment militia; one would think they would be proud
to be associated with that militia and want the recognition they
so deserve. After all, those of us who served in the real military
had, without choice, our names and addresses published in our
home-town newspapers upon enlisting so it's only fair our militia
members are also so recognized.

Merry Christ-Mass,
Jeff KH6O

Thanks to all that responded. A quick call to Drake explained the logic,
and the blue wire should be carryiong +10 vDC which is pulsed to ground when
the selector switch is rotated. Another wafer on the same shaft handles the
BCD to effect the band switch.
I am missing the +10 v, and now I know what I need to look for.

Live and Learn.....

Used to be 145.55 simplex for the shuttle and MIR. I would likewise suggest verifying it,
and additionally looking at amsat's web page.

I have worked the shuttle voice and packet as well as MIR packet on that freq, but that was a few years back.

It is a good idea to co ordinate with another ham in the path of the orbit you are trying to work, as the packet robot may issue your QSO number after the shuttle is out of your aquisition range, and another station upstream may be able to snag the QSO number and relay it back to you on another mode of operation.

Good luck with the QSOs

Both units in really good shape. Complete turnkey setup with all relays and mute connectors. Comes with R-46, microphone, manuals and a spare SX-101 for parts. $550.00 plus shipping. It would be best to arrange some sort of personal pick-up and delivery as these are heavy and difficult to ship safely.

Source record: 74302
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

NC-303 has been re-capped and resistored. Completely aligned. Includes XCU-303 calibrator, NTS-2 matching speaker, NC-300 converter box with all three converters plus two extra original converters and one homebrew converter. The radio cabinet has been refinished and looks terrific but the gray is darker than original. The speaker and converter box have not been refinished and they need it. This is the most stable tube type radio I have ever owned. $500.00 plus shipping. It would be best to arrange pick-up and delivery as this one would be a disaster to lose in shipping.

8170. National NC-57 S-Meter box details??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-20 00:00:00 UTC
From: Crazy George <munsch@attglobal.net>
Message-ID: <385ef49c_2@news1.prserv.net>
Source record: 74311

One of the more desirable options for the National NC-57 was the external S-Meter. I have looked for one for years, and conclude that I am going to have to recreate one. Is there an empty metal case out there anyone would like to sell? Or, can someone provide the measurements of same, and the look of the rear; sharp edge, rolled edge, enclosed, what? I have catalog photos of the front, but need rear info, and a confirmation of size, particularly depth. Then, copy a NC-125/HRO50 meter scale, put it in an appropriate size illuminated movement, etc.
Thanks in advance for any help.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

Heh heh heh! And, how right you are! I have a '183 on the bench now with high band problems. So far, and more than 25 orange-drops later, I'm still working on it. But...that's all part of the fun... (I think?). 73 and best of the Holidays!! de Jeep/K3HVG

Looking at my books, the "CD" model had PTT installed and would operate, virtually, general coverage (the straight model does a credible job, too.). The "CD" model was approved by the, then, OCDM for Federal purchase. Many were provided to amateur clubs officially affiliated with the Red Cross or State/County CD. Our CD-affiliated ham club was issued 2 of them in the 50's.

IT's been years since I saw the internals on one of those - but I
wonder if what's referred to is actually the stuff used in key chains,
the little linked spheres (balls) - in which case, a trip to a good
hardware store might locate some over in the plumbing department,
where that material is used attached to the stop-plugs in bathtubs,
etc...

From: "Peter S." <petemar@1000island.net>
Message-ID: <HHA74.2742$a91.529@198.235.216.4>
Source record: 74315

I&#65533;m working on a Hallicrafters SX133 that I've had for some time. The 18ohm power resistor burned out and after replacing it, I read 220VDC on pin 3 of the 6GW8 AF output tube. The manual calls for 200VDC. The filter caps are good. Could anyone tell me if this will be a problem? The radio has never been a great performer for me compared to my S40 and others, so I&#65533;m doing a complete overhaul including alignment.
Any help would be appreciated.
Peter

From: corelord@dtgnet.com
Message-ID: <8EA2D252Dcorelorddtgnetcom@news.dtgnet.com>
Source record: 74319

My TR4C has only been putting out about 50-60 watts. So I figured I'd do a little checking. Pulled the tubes and ran then through my B&K 707 and Hickok 779 (both mutual conductance testers and both calibrated). They looked pretty poor. So no problem, just get some from my backup tubes. I check them all (8 of em), and they all come up lousey. So I decide to get some new ones. When I received my new ones(they don't look very new to me, strong getter flash and discolored pins). They don't test much better than the ones I had. So my question.
Is testing 6JB6(A)'s on a tube test a viable way of determining tube quality ?
Is is normal for NOS tubes to show getter flash ?

Opinions please.

Does anyone have info on the following equipment?

1: HME amplifier model HM 10-20. Built in San Diego, 10-40 mtrs, uses 8950 tubes. Any history or other info is very welcome, thanks. Small linear about 2/3 the size of a Halli S38.

2: Hamtronics FM-5 xcvr, 2mtrs

Would guess both are from late '70s but could be wrong. Both appear restorable. #1 has tubes so is marginally BA while #2 is catbox state but looks to be a kit.

I've been planning to build a test rig to check sweep tubes, and (hopefully) match them up into sets.

My question is this;

What plate, screen, and grid voltages should I use for testing a "typical" sweep tube (6JS6, 6LB6, 6GK6, others)? In matching, should I match for current draw or transconductance (or both)?

If posting a response, please respond to me by email as well.

Thanks,
Tom Mitchell

Sounds like you have a bad component in the amp stage...if I were you I would refer to the resistance and voltage charts in the manual and start checking...also to in the manual they say not to rely to heavily on tube checkers.
Pay attention to the screen voltage and bias at the 6JB6 tubes

hope this helps if you havent done this already...hi.

Hello,

I have available a 1950's vintage Station Radio B43/R220 Mk-4.

Station Radio B43/R220 Mk-4 is a VHF AM mobile transmitter receiver, originally used by the Anti-Aircraft Command in the 1950's. When the Anti-Aircraft regiment was decommissioned its radio equipment went in to storage or was transferred to other units. The B43/R220 Mk-4 was used as a vehicle set by the Military Police and likewise service units. There are 3 versions of the B43/R220 the first two are base stations, the Mk4 is a mobile station. Besides the housing and the power supply the TX/RX electronics is the same in all versions. The Mk4 has an additional public address amplifier. I've been told that this is a militarised Marconi set. I think my B43/R220 was a unit that went in to storage and was actually never used, it is complete with the remote control unit, handset and box with spare parts. Also the technical manual is available. I'm interested to sell or swab. I'm mainly interested in British military radio, W.W.II, Larkspur and Clansman equipment

Specifications: Station Radio B43/R220 Mk-4
Frequency range 70-95 MHz. One crystal controlled channel. RF output 12 W.
AM R/T only. Internal Public address amplifier. 12 volt DC power supply

A merry Christmas and 73's

I need the calibration instructions for two AVO Valve Characteristic Meters: the Mark IV and the Type 163. Very happy to pay copying costs, or will buy original(s).

Thanks very much!

DO NOT REPLY TO ME!

My friend Greg, W8RCA is selling 3 of his receivers.

Collins 75S1 with 2.1 filter and manual $450 shipped
Hallicrafters SX101MKIII A with R46B speaker and manual $275 SHIPPED
Hallicrafters SX100 with R46B (mint) and manual $325 shipped

All receivers are in excellent working order. The SX100 was partially recapped and has been bench aligned. It is 8.5 out of 10.

The 75S1 is a tight feeling rx with nice audio on AM and SSB.

The SX101 is 10-80 m. and is a nice rx but doesnt have the original vfo knob.

DO NOT REPLY TO ME!!!!!!!!!

Greg's phone number is:

Source record: 74345

FS: mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the "95" to leave "snowhill" in my email or call 334-347-5281 day/eve.

Snipp >>Is normal for NOS tubes to show getter flash ?
Yes, also NOTE:

If a TR-3 or 4 has full output in Tune CW but is lousy on SSB.
Assuming the rig is aligned properly with a good mic check this first:

Check your ALC circuit and gassy ALC tube a common troublemaker in the
TR-3-4 (this can be confirmed by forcing the ALC voltage down with a 100 ohm
resistor across the ALC Jack)
Check screen voltages, Driver tube, transmit mixer tube

Dont forget check Bias and re neutralize when changing power tubes

Good Luck

Of itself, I would not worry about that voltage being a bit high. If you check the book, you'll find that the line voltage is listed as 115 volts (in my book). If you have 120 or so, the B+ will be proportionally higher. Being that you may have other problems, however, more checking may be in order.

Ah, no.
Metal tubes are metal. They do have glass insulators where the lead wires come out, but otherwise they are a steel shell. The early manufacture had one tiny insulator bead for each lead and a metal evacuating and sealing stem in the centre bottom (inside the octal locating peg), but later manufacture used a glass disc with all bottom leads and a glass evacuation and sealing stem. It is said that this is the basis for the miniature 7 pin glass tubes which have a base almost exactly the same as the metal tube seal insert, and came out shortly after the change in metal tube construction (1939).

Bruce,

You probably know this but just in case... There are schematics for the HP-23 and HP-23B on the BAMA site run on our behalf by Ken Grimm. I know no HP-23A but they may provide insight. I have a manual for the PS-23 but just looked and the schematic is missing.

You can get to the Heathkit directory through you browser by going to ftp://bama.sbc.edu/downloads/heath

Good troubleshooting, always lots of fun,

I've owned a TS830S since 1987. As is typical with any transmitter it should be nuetralized at the highest frequency of use. I haven't seen any problem on other bands. Was the plate voltage removed when the neutralization took place ???

Also, use a purely resistive dummy load after the rig is put back together to check the results.

8252. Mic connector for Hallicrafters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-22 00:00:00 UTC
From: lennyw@home.com
Message-ID: <MPG.12cae1014c44e279989682@news>
Source record: 74373

Hi

I've been looking for a Microphone connector (plug) for a Hallicrafters HT-44. It's an Amphenol 80-MC2M. 2 pin male with metal shell and threaded locking ring.

Amphenol (Hong Kong) quotes it at $25.00 each plus customs / shipping with a minimum order of 10 pieces and delivery of 12 weeks. Yikes!

Is there a local (e.g. US) source for these connectors?

(Nothing in Allied/DigiKey/Mouser that seems to fit).

Thanks in advance for your help & best wishes for the Holidays.

From: Tom Quayle <tquayle@montana.com>
Message-ID: <38611B09.BD83F4A6@montana.com>
Source record: 74379

Hello:
Can anyone point me to information for building a home brew a HF amplifier using 811A tubes. I have a couple of schematics, Ameritron and Collins, but if course no parts information to go on. I'll appreciate any info on an amplifier like this that would detail the component values and part numbers, etc. for band switches and inductors if such parts are readily available. Thanks, Tom - W7ARR

Bruce,

I have an original HP-23A manual. I'll scan the schematic and some other pertinent info and email it to you in JPG format. I'll try to scan the info tonight at home and email it to you form work tomorrow.

You wouldn't happen to have any HP-23 parts laying around, would you? I'm looking for a bottom cover, and perhaps a doghouse. I just got done rebuilding an HP-23B, but the covers were missing when I got it.

I've rebuilt many HP-23 supplies over the years, and I'd suggest you just replace the rectifier diodes, filter caps, and bleeder resistors in the +800 supply and be done with it. 1N4007 diodes work nicely and are dirt cheap. The filter caps are almost always bad or weak. The paralleled 100K Ohm bleeder resistors are silly. Just use one 100K for each bleeder instead of paralleling them. This will save space and reduce heat inside the chassis. And use metal film type resistors if you can get them; they run cooler and hold their value better in the long term than carbon types, and they're smaller in size (2 Watters are the size of 1 Watt carbon jobs).

By the way... I'm parting out a virtually complete SB-102. Need any parts for yours? I have a CW filter, near-mint panel meter, knobs (including the CW filter lever knob!), switches, crystals, and so forth. It has a pretty nice front panel too. The LMO dial is cracked at "15" and "65" but still looks decent and is usable. It's better than the average used SB-line dial.

73 for now,
Dean / K5DH

I've got an old microphone from a Hallicrafters CB that has a connector on it that matches your description. I can't find a number on the connector, but it does say Amphenol and it's a 2pin male as you describe. The microphone is an extra, so if you want it, send me your address and I'll mail it to you.

Apparently, the two most valuable parts are the connector and the Halli logo. Someone had removed the latter, but what you need is still there.

Be careful with the metal films...the working voltage of MF
parts may not be enough for your application....they're certainly
lower than MF parts...and a watt's a watt...they should run
at exactly the same temperature....

Metal oxide composition resistors would be my recommendation.

Best

Source record: 74391

Hello, I mangaged to somehow loose/misplace a friend's manual for the Navy version of the HQ-
120X. I'm not sure but I think it is a Navy RBG-2 from the War years. I've never actually seen the manual. This is an awkward situation. It was in some things I bought from him. I don't think I ever had it at all, but this issue is causing some friction between us. He says it's about 30 ppgs. Anyhow......I told him somehow, I'd try and replace it. I'd like to ask if anyone out there has one he'd like to sell, or I'd gladly pay the price for a good copy. I don't know where to start, but would gladly pay a reasonable price, plus, for a copy or original. I guess the version he had was the 1944 Navy RGB-2, and that is the one I need to replace. Hoping to save a friendship here...Thanks, Bob..

Hi,
I am looking to purchase two UHF GE MASTR II UHF radio's. Prefer complete units with control heads. Must be the later model (painted handle) units. Must be working 100%. Output can be either 40, 75, or 110W versions. Needed for my repeater.

Please email specifics. Check my swap page if you want to do some horse trading. http://www.PapaDads.com

Thanks, Joe K7JOE

You can have it for the cost of shipping (it's heavy BTW). Clean and good condition but donnow if it works. Has manuals and mil spec shipping container too, all in good clean condition.

It's located at my mom's house in Oradell NJ (exit 165 on the parkway) if you're in the area if you want to drop by and pick it up. E-mail for details.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

HOLYCOW!

I work 10 meter AM pretty frequently - and hear a fair number of G-28's represented. I've had several of them, and recently bought my current one off THIS newsgroup for $100 - and a D-104 for another $26, which seemed quite fair. This damn "collectors craze" for ANYTHING "OLD" is getting completely rediculous and out of hand! Shucks, *I'm* old too - but very few seem to think I am of much greater "value" due to my age alone... SOME old stuff *is* neat, fun and collectable - the REST is just *old junk*.

On the OTHER hand, if there happen to be *2* idiots out there willing to pay redicilous prices for a G-28, I'll "sacrifice" mine for a trivial $550 - yeah, and *I* will throw in a D-104 as well...

"Here sucker sucker, here suc......."

Gary - KJ6Q

And Dave, don't bother me with your squeals
of anguish/protest over the above - your price
is foolish, and we ALL know it! NOR are the REST
of us "honor-bound" to stand quietly by as you
attempt your version of hiway robbery...

Source record: 74418

Hello & Happy Holidays to all lovers of Ol' Radios and Radio history.

What with just a little more than a week left in 1999 and dawning
of 2000 (I'm not going to say anything about the millenium since
I still don't agree that the 20th Century ends with 1999).
There has been a lot of discussion lately in the popular press
and media about the "Best, most important" person, development, etc.
of the century. I got to thinking about "Who" and "What" were the most
important person and Radio in the 20th century.
I think in aviation circles the Douglas DC-3 is considered the most
important airplane ever built. Well what was the most important "Radio"
in the 20th century? And why?
Also, who was the most important person in the field of radio in the
20th century?

I'm still thinking about which radio was the most important, but I already
know who I believe was the most important person in radio, I think
it has to be Edwin Armstrong the inventor of the regen detector, the
Super-Het and FM.

I really like to from you, I will attempt to boil all the responses down
and post them back ton the lists. If there enough comments I'll
do a "Top 10" of radio.

Again, HAPPY HOLIDAYS, and Happy Collecting

73,

Ron

For Sale - three groups of 12V Miniature tubes:

Priority will be given to those who want to buy a whole group.

Here are the 12 volt miniature tubes that I have left. They are a mix
of new and used.

All are in boxes, except for the two marked (*)

12AT6 Emerson. Used in Box $2.00

12AT7 G.E. * No box, used $2.00

12AT7 Bulk NIB (New In Box) $3.00

12AT7 Sylvania, Used in Box $2.00

12AU7A Sylvania Used in Box $2.00

12AV6 Mullard NIB..... $9.00

12AV6 RCA NIB $6.00

12AV6 G.E. NIB $4.50

12AV6 G.E. Used in Box $2.00

12AX7 Sylvania USed in Box $3.00

12AX7 Tung Sol Used in Box $5.00

12AX7A RCA Used in Box $4.00

12AX7A Hot Rod New in Box $6.00

12AX7A Bulk, NIB $3.00

12AY7 G.E., NIB (1) $6.00

12AZ7A Sylvania, NIB $4.00

12BA7 RCA NIB $5.00

12CR6 RCA Used in Box $2.00

12X4 RCA NIB $3.00

7025 G.E. * No box, used $3.00

7025 RCA Used in Box $5.00

TOTAL FOR ALL ABOVE $81.50

If you would like all of them:
I Will sell all of the above for $65.00

Shipping additional

= = = = =

QTY 1 Amperex Bugleboy 12AT7 Tube $5.00
QTY 1 Philco 12AT7 Tube $3.00
QTY 6 RCA 12AV7 Tubes $12.00
QTY 3 Thuro 12AT6 Tubes $5.00
QTY 4 G.E. 12AV7 Tubes $10.00
QTY 1 Dumont 12AV7 Tube $2.00
QTY 1 Chandler 12AX7A Tube $5.00
QTY 1 Fender 7025 Tube $6.00

Will sell this box of 18 tubes for $46.00 total plus shipping

= = = = =

A box with 34 more 12V tubes.

They are a mixed bunch of QTY 32 type 12AU7 and 12AU7A tubes
plus two more: a 12AT7 and a 12AX7A.

These 12AU7s are mostly new. All are in boxes. Brands are Dumont,
Westinghouse, RCA, Raytheon, SYlvania, AMperex, G.E., Tung Sol etc.

The two others are a used Raytheon 12AT7, and a new Bulk
12AX7A.

The 15 NIB 12AU7 are $4.00 each. 10 NIB in white boxes $3.00 each
The other 7 used in boxes are $2.00 each

12AT7 is $2.00 and the 12AX7A is $4.00

Will sell this box of 34 tubes for $59.00

Shipping additional

Hi Ron,
I agree that the 20th century won't end for another year.
I'd really like to pick Marconi, who's work straddled the turn of the century. He actually invented the radio in 1895 but it's importance was realized this century. If you want to consider Marconi in the 19th century, then Armstrong is a good pick for the 20th
The second place radio is much tougher to pick. First place goes to the KWM-2 for reasons too lengthy to list.

73,
Steve W2ZR

I like Armstrong... Great inventor but he let the General bend him over way too many times.

I really think Nicky TESLA to be more important. He invented radio. In 1936, the US Supreme Court stated as much as Marconi and DeForrest tried to claim that credit. Marconi was pretty much a DX'er but he really didn't invent anything.

As for Radio's... my vote is for anything HEATHKIT. Is there a ham who DIDN'T build or owned one of these things??? Lots of people got their start this way...

Bill Halligan and Hallicrafters would be my second choice. They made mass produced Shortwave receivers affordable to the general public.

As for Aircraft... nah... the DC-3 is OK... but my choice would have been a nice yellow J-3 cub.
Even today - the J-3 is still the essential fun flying machine.

Second would be the B-52. Any A/C that can still be flying after 40 years and still remain a serious threat deterrent has earned it's place on that list.

- Happy Y2K

Yes.

> I have both a G.E. mobile mic and a G.E. (made by Shure) desk mic,
> that both have unshielded wire (strange)

On the contrary. These microphones are obviously intended for use with FM transmitters. RF feedback is seldom an issue with an FM transmitter. Even the most horrific installations are unlikely to cause squealing and howling on FM. The easiest way to confirm is to see if the hanger/nubby on the back of the microphone has a wire attached to it. This is for tone squelch which I've never seen used on any other service.

> and the mobile G.E. has some
> sort of single stage pre-amp.... Or maybe it is the power supply for a
> condenser mic? Not sure.

Not a GE expert, but it is quite likely a pre-amp of some description. It could be a circuit that injects a DC bias from another one of the microphone leads though.

> Can anyone advise?

FM microphones are either dynamic or condenser (duh!). The dynamic units are either unpowered or have a built-in preamplifier. This preamplifier is almost always powered from the microphone line. If they are condenser they will also require a + bias on the microphone line. However, many radios also have a V output pin that could be used to generate the bias in the microphone. The voltage could be between 6V and 13.8V - it all depends upon the unit. A typical ham radio uses a condenser microphone also with bias on the microphone line so using the GE microphone on it shouldn't be too large of an engineering exersize. Of course, you may want to replace that un shielded cable!

Ahhh the Wizard of Menlo Park!

Actually Edison did very little. He didn't invent the light bulb, others in France and the UK already had working models... he only perfected it.

He hired a number of assistants who actually did the inventing and he took all the credit. If anything, he invented the first "corporate" science factory.

He was not so much an inventor as he was a very shrewd business man. He was very careful crafting his own myth.

Tesla was one of his many assistants and saw the writing on the wall and left. Had he stayed and convinced Edison about the benefits of polyphased power transmission - Edison could have claimed to have invented that as well. Because Tesla had upped him - Edison spent the rest of his life trying to destroy him. (AC/DC wars)

One of many good books to read would be EDISON, INVENTING THE CENTURY by Neil Baldwin (Hyperion Press) and TESLA, MAN OUT OF TIME by Margaret Cheney (Dell Press) and don't forget EMPIRE OF THE AIR, THE MEN WHO MADE RADIO by Tom Lewis (Harper Collins) covers Doc DeForrest, General Sarnoff and Major Armstrong.

But I was wrong about the Supreme Court Ruling - It was 1943 and it was Tesla's Patent # 645,576 (1900) which first describes radio - see AWA (Antique Wireless Assoc) Issue #4 March 1980

Sorry about the mix up -

I have several really good isolation transformers left if anyone is
interested.

600 Watt Toroid Isolation Transformer, with inputs for
120V and 220V. The output is
120 Volts. Flying leads. Excellent condition. Will sell
for $45.00

MORE Isolation transformers:
120V 2 Watts - $ 3.00
120V 50 Watts - $25.00
120V 150 Watts - $35.00
120V 180 Watts - $45.00 In case, with 2 outlets
120V 250 Watts - $50.00
120V 500 Watts - $85.00
120V 1000 Watts - $105.00

115/230V Primary 2V/30A or 4V/50A sec. potted $36.00
(QTY 4 available)

120V Primary, 18V/2A $8.00

120V Primary / 6V AC at 166 Amps! $90.00

120V Primary / 9V AC at 111 Amps! $90.00

115V / 230V Primary, 7.5V 51A Sec Approx size:
4.5" X 4.5" X 4.5" tall $80.00

115V Primary / 7.5V at 46 Amps $80.00 (QTY 3)

STANCOR S-6314
Primary 115V AC
Secondaries
SEC 1: 760V CT at 120mA
SEC 2: 6.3V at 6A
SEC 3: 5V CT at 8A
Dimensions: 4.5" X 3.75" X 4.25" tall
Drop-through mounting with four #10 screws at
Will sell for $22.00

105, 115,125V Primary, 860 VCT/190mA, 6.3V/5A, 6.7V/10A,
5V/2.5A, 32V/1A
$45.00

900V CT at 160 mA $28.00

920V CT at 100 mA $26.00

1000V CT @ 225 mA $32.00

1140V CT @ 85 mA, 5V @ 2A $35.00

Thordarson T-68C07 B+ Power Supply CHOKES
Dimensions: 3.0" X 2.5" X 2.0"
Above chassis mounting with two holes
on 2-7/8" centers
QTY 2 - Will sell for $10.00 for the pair

Several other types of transformers available.

I have a "new" Pace Communicator 2 Mtr. HT. It still has the protective film on the "faceplate" and drop-in charger (no manual). I would like information on what crystals will work in it. It has a "beige" case, powered by 10AA cells and resembles the Wilson HT's from back in the 1970's. A relic, I'll admit and rather large, but still sorta appealing??

A hearty "ME TOO!".

The mag is a mix of history, theory, current events, and personal stories.
Great ads, too. (How often do you LOOK FORWARD to reading ads?)

Back issues are available, too. Kind of ironic that a mag on vintage radio is
made possible by the use of modern computers.

This is an original bipolar DPM, with instruction manual, in good condition.
Basic sensitivity is +/- 100 mV, which can be changed with resistors.
Decimal point can be set. Displays +/- 1999 (so called 3 1/2 digit) with
Polarity and Overrange indication.

The TBS series of radio equipment were used on shipboard in the 1940's and 50's. They operated crystal controlled on frequencies such as 72.5 MHz. The only use was for Task Force Command Nets (groups of 40-50 ships); this was for giving commands for manuevering, etc. Frequencies in this range would give good coverage and reasonable security. Being similar to 6 meters, occasional transpacific contacts were possible. This function moved to UHF around 1954; as there was only one TBS per ship, there should not be a great many of them. The "talk between ships" was not an official name. I wish I knew some technical info, but I've never seen one. 73, Ross N0ZA

Well, I hate too but I must add insult to injury. Seen early this week
on the notorious eBay: Hallicrafters S-38E, 12 bidders, current bid at
$175 with 2 days to go! Holy Beejeezus! What is going on with *that*?
How much more nuts can this get?

I am looking for about 75 - 100 empty, preferrably blank boxes to put old 7 and 9 pin minature tubes in (example: 12AU7, 6AL5, etc). I have called several used tube dealers, and they don't have them.

Anyone out there have any for sale or have any leads?

Howdy all and Merry Christmas.
After reading the various threads and after some real thinking on this, I'd have to agree with the fellow who named Heathkit as the champ. Though not necessarily a particular unit as requested, it's my firm belief that these kits did more to further the knowledge, confidence and competance of radio amateurs world wide both in the technical aspects of our hobby and the operational skill of the users of same....and even long after their departure are still doing so. These statements will undoubtedly be lost on those never having had the experience or the will to experiment and grow but during some good and not so good times for finding components and parts, Heathkits saved the day for amateur radio in many cases....in my opinion.

There were many notable equipments however, both general and specific and the inventors and developers of same, richly and rightly receiving the vote for "best" and tis only a fine line to an individual who is deserving - I think they all are more than worthy. I did like the gent who mentioned Mr. Fessenden....often forgotten it seems.

If asked to select the "best of the century" means of electronic communication, it would be a toss up between the undisputed champ of voice over wire by Alexander Graham Bell.....and Morse Code.....whether sent via wire, wireless, spark, MCW, CW or high speed burst. I honestly believe that it will take some real luck and foresight to develop another means, beside morse code that can cross barriers of MODE, SPEED variation, INTERFACING literally thousands of different types of equipments, ability to communicate MACHINE-MACHINE and MACHINE-HUMAN in any direction, and has stood the test of time for at least this hundred years as a communications standard. For such a simple communications means, the well developed procedures and signals which allowed CROSS LANGUAGE and DIALECT barriers were not pioneered in the voice or data fields, to the best of my rudimentary knowledge. Technically speaking, considering its early development, morse using CW has, even today, stood the test as one, if not the best, technically superior means of communicating at the limits of bandwidth and signal strength. Of course, there have been milestones in the latter fields sending specific data to space projects, but at what complexity and cost?

Sadly, television, would have to have a signpost in all this, not for what it is, but for what it has become used for.

73 (See, even this signal, developed for morse, is known cross-language)

Gord Skiffington - VE1AJF

I'm trying to figure out what you mean by "Modern". The 4-1000 is an old tube, been around for a long time. The RF circuit that is used with it, is basically unchanged, and for good reason, no one has found a better way to make this tube work at RF.
The thing that has changed, is the control circuits, which ar pretty basic too.
You need to clarify your question, and explain what you want in more detail.
I think you will find that you, yourself will have to come up with the circuits.
As the old saying goes;"If it ain't broke, don't fix it."
Look in the radio hand book, it has all you need to run a 4-1000.

Hello All:

First, a merry christmas to all "on freq" and it is very appropriate that this topic should be posted tonite.

My vote goes to a Canadian born engineer named Reginald Fessenden who did all his work in the US in the early 1900's and developed the start of what I will call "true radio" where continuous waves were generated rather than spark transmissions.

On Christmas eve of 1906, Fessenden is credited with making the first voice radio telephony transmissions. This transmission also included violin music and a short greeting to all ships at sea.

This is a "cut and paste" from the Canadian Association of Broadcasters Hall of Fame site.
"After struggling to obtain financial backing for further experiments, and jeopardising his rights to many of his inventions, at Christmastime in 1906, Fessenden beamed the first radio broadcast to astonished crews in ships at sea.

The first-ever radio program was transmitted from Boston on Christmas Eve with the inventor also being a performer. On his violin, he played 0 HOLY NIGHT and gave several readings from the bible. Joined by his wife and a friend, they sang Christmas carols. Unfortunately, this remarkable feat was eclipsed by the praise lavished on Marconi and others, and he has been all but forgotten in history."

The first experiments with voice trnasmissions used a carbon mike was inserted in the antenna of a spark transmitter and modulation impressed on the signal, but with a horrendous noise from the spark also present. Fessenden later progressed to the deveolment of conyinuous waves and modulated them to provide "high quality audio" transmissions.

Here are a few links to Reginald Fessenden sites that might make for some interesting viewing for you.

This site leads to a Real Audio file of a re-encatment of the first transmissions.
http://www.capcan.ca/english/canadiana/inventions/fessenden1.html

http://www.kwarc.org/hammond/fessenden.html

http://trfn.clpgh.org/nmb/nmbfess.htm

http://www.owlnet.rice.edu/~skoe/engi_fessenden.html

This site provides extensive data and schematics of the early method of voice transmission. http://www.ipass.net/~whitetho/fess1907.htm

>in the 20th century? And why?

For radio of the century, I would nominate the lowly "command" set aviation receiver. An early version of the radio, built by Radio Frequency Laboratories (later, renamed ARC Avionics), went up with Jimmy Doolittle when he made the first "blind" instrument flight, back in 1929. A few years later, the command set helped to win WWII. And yet a few years later, hams like me converted them for AC operation and, in my case, used one for 40 meter CW.

What other receiver saw so much history?

GOOD ONE Bob......heck one of my first "converts" was a command receiver which still sits over in our clubhouse (to the puzzled stares of the 2meter only crowd)....that was in the early 70's and my mods were to feed back the IF for CW (make it regenerate) and (hold the flames guys) cut the pushpull transistorized PA from an old table radio and install it on the rear "deck" heheh. A custom power supply followed with speaker and T/R relay control for my DX60 back then......bandspreaded to just capture both 80 and 40 meters it was an astonishing receiver to even make a contact with....but the cards are there heheh.

Thanks for the reminder.

Can anybody identify a Cw Tx. circa 1939/40 made in the U.S. In case with hinged lid size 9" h. x 9"w x 6"d. black wrinkle finish. Uses 4 plug-in coils 6 pin
base covering 1.5-2.0Mc. 2.9-5.3Mc. 5.3-10.6Mc. 10-20MC. 3 Tubes.
1613. 6F6. 807. Xtal controlled. 2 Meters top left-hand corner.
0sc,amp.doub. and p.a plate tune, have the name "Hobut" on the scales.
There is no name plate except for serial No. but I am wondering if it is a National product as the coil base is marked "National. Malden, Mass" and 2 of the tuning Capacitors are also National components. There is also a matching P.S.U the same size and connects by means 4 pin minature Jones plugs, the mains Tap Switch is the same as used on AR,88 Rx.
I am in need of the 4 Plug-in Coils, grateful for any lead.
John

An historical note from one who was there - the Globe King, sold by Leo, W0Get Fat Quick, had an outboard SSB box you could buy - this was an option with several rigs, like the B&W5100. And, yes, the DX-60 was Heathkit. My first rig was a DX-35, its predecessor, with an S-38C receiver and a long wire. It worked.

73 and happy holidays -

Hi Gang,
I came across the following at the county library "free pile." They're
your's for just postage:

Photofact folder set no. 111 (all dated 11-50):
Air King TV model 2017r
Bendix TV models 2051 2060 3051 6001 6003 6090 6100 6920 6990
Emerson portable radio 656b 657b
Emerson phonograph 634b
Jewel portable radio 5010
Masco audio amplifier mc126 mc126p
Oak 45rpm record player 9201
Sentinel phone/radio iu339k 339k
Silvertone phono/radio 33
RCA TVs 2t51 2t60
Motorola TV/stereo console 19f 19k

Photofact folder set 656 (all dated 9-63)
Emerson phono console p1913
GE clock radio c937a,b
Olympic TVs
Arvin stereo console
Continental fm radio
Motorola stereo console hs1043 hs1048 hs1050
Phonola stereo console
Westinghouse fm rcvr h839ns
Airline TV
Grundig Majestic model 5299u/s

Photofact folder set number 682 (3-64)
(Getting lazy): Emerson, Olympic, Zenith, Airline, Emerson, Motorola,
Philco, Silvertone, Transonic, Vista, V-M, Zenith items

Photofact folder set number 419 (11-58)
Airline, Emerson, RCA, Dewald, Grundig, Harman-Kardon, Knight,
Lincoln, Mopar, Motorola, Norelco, Pilot, Regency, Watterson items

Photofact set number 1509 (9-75)
Magnavox, Sanyo, Broadmoor, JVC items

Even if you don't own any of the above gear, this stuff has
historical value. Honest! (Especially the 1950 folder.)
Each can fit in a flat-rate ($3.20) Priority Mail folder.

>fool you they year 2000 is the last year of the 20th century NOT the
>first year of the 21st.

Q: When does your first year of life end?

A: The end of your first year of life is the day you turn one;
at that instant you've *entered* your second year of life:
At the end of that day, you're 1.0027 years old -- you're *out*
of your first year of life and have begun your second year.

Your first year of life runs from the day you were born to the
day *before* you turn one. The next day, you turn one year old
and thus have entered into your second year of life.

Being one year old is *not* the same as being in your first year
of life.

Similarly, the end of your 20th year of life is the day you
turn 20; at that instant you've *entered* your 21st year of
life: At the end of that day, you're 20.0027 years old --
you're *out* of your 20th year and *into* your 21st year.

Being 20 years old is *not* the same as being in your 20th year
of life.

Now substitute "century" in place of "year."

Hope that helps!
Jeff KH6O

> been replaced with keyboards and mice. Now ANYONE can operate a SSB
> radio if you have the kilobucks.

I agree completely with every thing you said. In view of the above, no
theory and no code license should be available
to all those that just want to operate an SSB transceiver. If you can
operate a computer or microwave oven or TV set,
operating a SSB transceiver is easy. Thus, no need for theory or code.
How about a no theory and no code ticket.
It can be packed inside of the new transceiver, just mail it back to the
FCC. Simple and quick. Also a subscription can be included to QST. I
vote for no theory and no code.

Of course I'll be operating my Viking 1 and Super Pro on cw! and
occasionally on AM phone.

Sorry Jeff you're wrong. I would expect a lecturer in mathematics to be able to comprehend the difference between 2000 and the start of the new century/millennium.. Perhaps you are a victim of that new math. Check what the Naval Observatory has to say on the subject. NIST seems to share the Navy opinion. I leave Greewich as an exercise for the student.

When you get back to UH ask some of those Professors they'll be glad to help.

Hi John,

I, also, have a CM-1 and it WAS a CONELRAD receiver. As I live near an old Morrow worker, he informed me that the additional (non-essential) sockets were for parts for the alarm feature.

Enjoy your radio. Mine can be seen at:

http://www.theofficenet.com/~rjones/morrow.htm

This is the sort of thing that goes around forever (or seems to); the year ONE (I) was the first year of the first century. The year 1801 was the first year of the nineteenth century, etc. Blame it on Dionysus Exiguus. Want to change it? Sounds like a good idea! By popular acclaim, let's make the twentieth century only 99 years long and start the 21st with 2000!

For Sale: A very compact RCA Signal Generator. 85 Khz to 40 Mhz in six bands. Includes two preset sweep oscillator assemblies for 455 Khz and 10.7 Mhz. CW with AM modulation for all frequency bands. Two bands, 200 Khz to 600 Khz and 4 MHz to 14.5 Mhz can also be swept or CW. Provisions for external am modulation and tone out. Comes with original RCA output cable with matching network and clip assembly. Also has a front panel HC-6U ceramic crystal socket and a two position crystal oscillator control switch for checking crystal activity I presume. The unit is emacuate inside and outside with hardly a blem to be found. Front panel has engraved lettering and is brushed aluminum. Cabinet is RCA Hammertone dark gray.
It may not be an HP 606, but it sure does not take up as much space and with all the features it would be a nice addition to a radio bench for general trouble shooting and alignment work. The RF attenuator is by a pot and switch arrangement. I have not measured leakage and would suspect it is about average for this type of single shielded unit.

$50 post paid conus. JPEGS available

tnx for the read

Jeff:

The VF-1 is notoriously unstable. If you're going to use it with the DX-60 on AM, better let it warm up about an hour, and keep it from getting too hot. If you're going to use for it CW, don't! It will drift unmercifully.

http://users.erols.com/oldradio/

I would refer those looking for Radio's Best of the Century to this website.....
a biographical collection of Edwin Howard Armstrong's papers, and other memorabilia.

This man was without compare in the gifts he brought to the world, (Regeneration, Super-regeneration, Super-Heterodyne, and FM,just to name four), he explained the workings of the Vacuum Tube to it's inventor, (who did not understand the potential of what he had made), and one can only imagine the types of things he could have accomplished if Corporate America (in the person of his "best friend") hadn't gotten in the way.

As to the radio itself- the living room console gets my vote,too. My personal favorite was a 1937 Farnsworth that was given to me by an Aunt. It had Shortwave, "Police calls", and Broadcast band.....remarkable thing that gave me a Lifetime hobby....just wish I had it back...

Close second would have to be the little 6 transistor pocket AM portables of the '60s......as a boy , I was never without one of those....

Bill Timmins, N3DDY

8432. KWM/HF-380 Intermittents Solved

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-27 00:00:00 UTC
From: wb0poz@prodigy.net
Message-ID: <8499of$481u$1@newssvr04-int.news.prodigy.com>
Source record: 74080

Here is a possible solution if you are experiencing intermittent problems with your Collins HF/KWM-380.

I agreed to fix this radio for a friend. Problem was no xmit audio, before the xmit went the relay chattered on voice peaks. I replaced a dead MC1496 balanced modulator and the rig took off and seemed to work fine.

The next time I turned it on, the VCO wouldn't lock (symptom: display=all zeros and fast beeping from speaker). Tunring the rig off and on would sometimes get the VCO to lock, other times it wouldn't lock at all. Bumping the radio and jiggling wires seemed to have no effect. I noticed that the regulator pass transistors seemed to be a bit warm, especially since I hadn't been transmitting (this *should* have clued me in to the problem). Then, I turned it on and the prmary fuse blew.

Upon replacing the fuse, I took voltage readings on the regulator card - all regulated voltages seemed OK, but the 20V unregulated line was at 24V! Looking at the schematic, the only possible cause was shorted windings in the secondary of the power transformer, or a mis-wired primary (it is settable for 105, 115, or 125V). Sure enough, some knucklehead had wired the primary circuit for 105V (we have a nominal 125V line here). None of the other screws seemed to have been disturbed on the primary circuit terminal strip, so this may have come from the factory this way. Setting the primary to 125V solved the VCO lock problem and the warm transistors cooled down - and the 20V unregulated line settled down to 19.86V.

The synthesizer card evidently gets 20V unregulated (it has its own regulators on board). Guess 24V was enough to drive it wacky once in a while. This problem may have also cooked the balanced modulator and caused the chattering relay, although I haven't noticed that problem since the radio has been in my shop.

Check that primary setting, especially if you've had some weird or intermittent tthings going on with your '380.

BTW this radio is a pleasure to operate, and is extremely easy to work on (compared to Scrapwoods, Yahoos, and Iscums).

The first century had only 99 years in it?

From year 1 thru year 99?

And the second century began in the year 100?

If we could widen that to "Best of the millennium," I'd have to nominate the landline telegraph. I've been reading several book on the topic (currently, Harlow's "Old Wires and New Waves") and I can't think of any other single invention or mode that tied this nation together as a single entity than the telegraph. Going from a single line between Washington and Baltimore, to a spider web of lines covering the East, then the South and Great Lakes, then finally the Transcontinental Line, meant news could now be disseminated nationwide in minutes rather than days or weeks. (In fact, one of the first messages to be sent on that first wire, connecting Washington and Baltimore, were the results of the 1844 Whig Party presidential convention; citizens in Washington were astounded to receive the results almost instantaneously! That caught the attention of the press, and from then on, the press and the telegraph became inseparable.)

From Bell's experiments with the harmonic telegraph (an attempt to multiplex several telegraph signals on a single line using tone reeds) came the accidental discovery that audio signals could be conveyed over a wire, thus, the telephone.

The discovery of induction telegraphy (telegraph signals induced from one wire to another) was really the first form of "wireless" tele-graphy.

Yep, the landline telegraph gets my vote as the mode which began the communication revolution; it's The Mode of this millennium.

(I find that one of the most interesting things about the telegraph was when it was discovered that using a single wire and the earth ground as a return conductor worked better than two wire conductors. Amazing.)

You already posted your FA ads earlier in the week; anyone who
was interested would have book-marked your auction pages and be
well aware when your auctions would end. Why post "last call"
notices, knowing how sensitive an issue auction announcements
are in these newsgroups? One notice suffices.

SKN begins 0000 - 2359UTC January 1st, 2000. When participating in SKN, instead of sending RST before sending the signal report,send the letters SKN to indicate your participation.

The contest is open to all license classes.
The object of this friendly on the air gathering is to enjoy the art of conversation using "straight" CW hand keys - NO electronic keyers.

At the end of the contest you can vote for the best fist you heard (it doesn't have to be one you worked). Also, include your vote for the most interesting QSO you had or monitored, as well as any other comments you may have for the SKN 2000 write up.

Entries may be e-mailed to the Contest Branch at StraightKey@arrl.org, or via mail to SKN, ARRL, 225 Main St. Newington, CT 06111. The SKN write up will appear in the April issue of QST.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

Dust of those AM rigs and get them warmed up!! This Thursday December 30th
is the final Collins Collectors Associations AM night of the Century!!
Starting at 0200Z or 8:00 pm cst. We will be on 75m at 3885kcs and on
160m between 1980-1985kcs.
75m net control will be Jim W0NKL
160m net control will be Butch K0BS.
Everyone is welcome to join in. You do not need to be running Collins
equipment! What you do need to do is join us for an evening of fun and some
GREAT sounding AM equipment Hear you all there! 73's Larry WA9VRH

Both units in really good shape. Complete turnkey setup with all relays and mute connectors. Comes with R-46, microphone, manuals and a spare SX-101 for parts. $550.00 plus shipping. It would be best to arrange some sort of personal pick-up and delivery as these are heavy and difficult to ship safely. If you are interested only in the receiver set-up, please let me know. I have someone interested in the transmitter only.

Source record: 74233
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

NC-303 has been re-capped and re-resistored. Completely aligned. Includes XCU-303 calibrator, NTS-2 matching speaker, NC-300 converter box with all three converters plus two extra original converters and one homebrew converter. The radio cabinet has been refinished and looks terrific but the gray is darker than original. The speaker and converter box have not been refinished and they need it. This is the most stable tube type radio I have ever owned. $500.00 plus shipping. It would be best to arrange pick-up and delivery as this one would be a disaster to lose in shipping.

Hi, Ross-

Here's a tip on the HQ110. Try to get the HQ-110A, not the earlier C model. The 'A' model was more than a facelift: it cured the serious drift problems of the original receiver and the 6-meter band actually works. I owned both back in the 60s, and the 'A' is like a different rig.

I find it interesting that the Collins Collector Association sponsers their AM night but once per year. There must be a reason.

Collins - The Company that did so much to advance the cause of SSB and did so much to create the demise of AM. Now the CCA has a token "AM NIGHT". Ironic.

>first year of the 21st.

From arithmetic:
When the hundreds (or century) column increases by one, we've moved
into the next century: 1,999 ---> 2,000 (recall centi = hundredths).
^ ^
Notice the nine increased by one. Any change in the hundreds
column indicates a change in century. Similarly, any change
in the tens (or decades) column indicates a change in decade.
Any change in the thousands column indicates a change in
millennium. This is all second-grade arithmetic.

Think there was no zero year? Christ was born as *late* as 1 BCE
(possibly eariler). If you look at the number line below, you'll
see that for counting purposes, 1 BCE takes the role of zero:

```
-----+-----+-----+-----+-----+----...
1BCE 1AD 2AD 3AD 4AD
```

Hope that helps,
Jeff KH6O

HI Pat actually there are 4 AM nights sponsered by the CCA. They are held in the months that have 5 Thursdays. In fact we are thinking of doing either a monthly or every other month AM night. As far as the end of the Century.... well at least I know people are reading the messages. In reality until you can convince the Press of what year it is I personally want to thank all of you that read the postings! Hope to hear you on the CCA's AM night. 73's Larry WA9VRH

Source record: 74241

I think you give ol' Artie W9CXX more credit than he deserves... AT&T was experimenting with SSB since the mid '30's.

Collins place in history is that he was able to convince SAC (USAF) to go SSB. Landing a nice government contract along the way. Till then, everyone was using AM and CW.

Collins has been around since 1931 and has produce many AM transmitters and receivers. Supplying the Byrd expedition as well as numerous airlines, broadcast stations and police departments. But the amateur market has always played a very minor part because, frankly there is very little money here.

The great SSB/AM wars came about because SSB ham equipment became cheaper. Hallicrafters, Hammarlund, Heathkit and Johnson Viking all had phasing type SSB transmitters during the mid to late 50's. These were far cheaper than anything Collins had at the time. Prices really dropped when filtered SSB came along. Rigs were easier to build and operate.

AMers who were sick and tired all the carriers moved to SSB to get away from the QRM.

And that would have been the end of the story....

But somewhere along the way, rigs became way too easy to operate. Computers now do any of the thinking necessary and knobs and meters have been replaced with keyboards and mice. Now ANYONE can operate a SSB radio if you have the kilobucks.

This has turned out to be not a good thing...

So AM is now on the upswing. Old rigs are being dusted off and put back into service. And real hams are now peaking grids and dipping glowing plates just as before.

I think the CCA AM nite is a good thing... just wished they used another freq. as 3885 is pretty busy down here in Texas. 3880 or 3890 would have been better.

Also - please - please - PLEASE -

NO AM contests !!! Lets keep that form of electromagnetic pollution strictly SSB!

8466. Need Crystals for DX-20

"On CW"?

WHAT CW?

After another round or two oc dumbing down the exams and eliminating CW as a part of them, WHY would there be any NEED for segmented bands - hell, EVERYONE will be exchanging "first personals" from their "20" on *voice* - not CW...

It's already disgustingly common on 10 meters...

I have decide to clean out a good portion of my manual
collection so I have some money for school. Below is
a list of the manuals I am selling. They are all in
really good condition unless stated otherwise. Many
of the SB manuals have no check marks. There are some
test gear manuals, but mostly ham manuals. All prices
include shipping in CONUS.

If you are interested in any manuals, be sure you reply to
me at robbinsm@umich.edu .

BR-2 broadcast band receiver $8
DR-1 decade resistance $3
DX-20 transmitter $15
DX-35 transmitter(No Cover) $15
DX-40 transmitter $15
GD-1B grid dip meter $2
GD-39 informer, ultrasonic intrusion alarm $2
GDA-1800-1 minuteman sentinel ultrasonic detector $2
GR-88 vhf-fm monitor receiver $6
GR-98 aircraft vhf monitor receiver $6
IN-12 resistance sub. box $2
IN-22 condenser sub. box $2
MM-1 VOM $2
MR-11 marine radio direction finder $8
MR-21 Mariner radio direction finder $8
MW-33 marine citizens's band transceiver $8
SB-101 ssb transceiver $18
SB-102 ssb transceiver (condensed manual) $14
SB-102 ssb transceiver $18
SB-301 ssb receiver $18
SB-400 ssb transmitter $18
SB-401 ssb transmitter $18
SB-610 monitor scope $18
SB-614 station monitor $18
SB-630 station console $18
SB-644A remote vfo $18
SG-7 signal generator (duct tape binding) $2
SG-8 signal generator $2
V-7A vaccum tube volt meter $2
VHF-1 "seneca" transmitter $18
T-2 signal tracer (blue cover type, duct tape binding)
$2
HW-20 Pawnee 2-meter transceiver $18
HW-30 "twoer" 2 meter transceiver $14

HW-100 transceiver (all binding glue is gone) $13

Make sure you are replying to robbinsm@umich.edu.
Thanks,
Matt

8471. Alexanderson Alternator on 17.2KHz

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-28 00:00:00 UTC
From: Al Klase <skywaves@bw.webex.net>
Message-ID: <8497e0$40p$1@nnrp1.deja.com>
Source record: 74092

The last remaining 200KW Alexanderson alternator, at radio station SAQ in Grimeton, Sweden will be on the air January 1st and 2nd to celebrate the station's 75th anniversary and the beginning of the year 2000. The CW transmissions are scheduled for 1200 UTC on 1 Jan 2000 and 06:00 UTC on 2 Jan 2000. The frequency will be 17.2KHz.

Radio Station Grimeton is being preserved as an historical site, and is (very) occasionally put on the air to celebrate special events. See http://www.telemuseum.se/grimeton/ for more information.

The last time I was aware of SAQ being on the air was May 28th, 1998. That was pretty well into the Summer electrical-storm season and I was just barely able to hear them at my Western, NJ QTH using a 40" shielded loop, a Watkins Johnson 357 receiver, and DSP software on the PC. No one else in the US reported hearing them. This time we get a shot at both a daytime and a nighttime path in the dead of Winter. It won't get any better than this, so grease up the antennas and be ready to listen New Year's morning.

You're right, of course, about the Millennium not starting for another
year. Actually, my question should have been, "When does the year 2000
start this Friday?"

But if it begins one tick after 23:59:59 GMT on Dec. 31, 1999, I'm surmising that it's beginning out at the international date line in the Pacific, not in Greenwich, England.

Steven:
I had both a 342 and a 348 way back in my early ham days of 1949. If I remember right the BC-342 was a more useful receiver in sensitivity. I didn't use them very long as I acquired a Hallicrafters SX-28A which became my main receiver.

8478. BC-342 vs. BC-348

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-28 00:00:00 UTC
From: novatech@eskimo.com
Message-ID: <84b08i$f5g$1@eskinews.eskimo.com>
Source record: 74099

Hello Boatanchor Experts:

I recently spent a fair bit of time restoring a BC-342 SW receiver for a Christmas present. I also have worked on and restored the BC-348 series of aircraft receivers. While I have the manuals on both these receivers, I don't have the real specifications. I would like to see a spec comparison along with a discussion of the relative merits.

My impression is that the BC-342 is a far superior receiver for a fixed application, while the BC-348 was designed to be able to take a large amount of detuning from aircraft vibration and still pick up the signal. When I hooked (not at the same time) each receiver to the same antenna and tuned the same station, I was impressed by the 342's performance.

Anyone know where to find the real specs on these radios. I found Corwin's 348 paper on the boatanchor website.

Thanks,

Steve

Follow-ups set to just r.r.a.misc:

Dark Avenger <dark_avenger@mindspring.com> wrote:
>Sorry Jeff you're wrong. I would expect a lecturer in mathematics to
>be able to comprehend the difference between 2000 and the start of the
>new century/millennium..

Yet you give no numerical argument.

Now slowly read this and try to comprehend it: On the day you were
born, you were *in* your first year of life, but you were *not* one
year old. Okay so far? Now, on the day you turned one, you began your
second year of life.

Similarly, being *in* your 20th year of life occures *before* you turn
20. On the day you turn 20, twenty years have passed so you begin your
21st year on this planet. This is crystal clear when you take the time
to think about it. But like learning the code, many seem to be uncapable
of understanding it.

Being *in* the 20th century occures *before* we hit 2000. On 1/1/2000
2,000 years will have passed, and we *enter* the 21st century.

>Check what the Naval Observatory has to say on the subject. NIST seems
>to share the Navy opinion. I leave Greewich as an exercise for the
>student.

Separation of church and state precludes them from believing the
fact that Christ was born as late as 1 BCE, not 1 AD. Hence
1 BCE takes the place of zero for counting purposes. Rather than
attempting to hurl insults, study and extend the following number
line, noting that for counting purposes, 1 BCE plays the role of
zero:

```
0 1 2 3 4 5
---+-----+-----+-----+-----+-----+---...
1BCE 1AD 2AD 3AD 4AD 5AD
```

You can't counter anything I've written.

Hope that helps!

For Sale:

Gonset Communicator IV 2 meter AM transceiver, with chrome plated Astatic D-104 microphone and chrome plated "G" stand (push-to-talk). All in *very* nice condition.

$140.00 plus shipping (ConUS), U.S. Postal Money Order only.

This rig is being offered for sale to a hobbyist or collector who would appreciate and enjoy this really nice "classic" 2 meter AM rig.

If your interest is in "flipping" boatanchors onto eBay for a quick and greedy profit, please don't waste your time or mine.

Thanks and 73,

-bill

>Could this be some type of Conrad receiver???
>
Quite so!! I just went through this search earlier in the month
A copy of the information packet with schematic and alignment instructions can
be purchased from Hi-Manuals (www.hi-manuals.com).
The missing tube is a 6C4. It controls the relay socket for an external alarm.
The suggested relay is a Potter and Brumfield #SM5LS-5000 ohm.
The idea is to tune the CM-1 to a strong local 24 hour station. If the station
were to go off the air, the alarm would sound; requiring you to check the
Conelrad frequencies to see if the world was being turned to ash. If so, then
you would be required to stop transmitting all amatuer radio functions.
From what I can read, normally you would just look at the signal meter on the
front panel for indication of reception, and add the 6C4 and relay for an
external alarm.
Hope this helps.

>
Sorry, that's just not right.

There is no year 0 in the current calendar system. A decade is 10 years, a century is 100 years, a millenium is 1000 years.

So the first decade started 12:00 AM on Jan. 1, 1 AD. It lasted ten years: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 AD. 11 AD was the first year of the second decade. Keep this up for ten decades and you find that the year 100 AD was the tenth year of the tenth decade, and the 100th year of the first century.

The first century ended at midnight on Dec.31, 100 AD. The second century ended Dec. 31, 200 AD. Keep this up for ten centuries and you see that the tenth century - and the first millenium - ended Dec.31, 1000 AD.

Counting the year 1 BC as "the zero year" isn't valid, because it belongs to the previous decade, century and millenium.

Sorry, that's just the way it is. All because there's no year 0.

Both vintage AM and vintage SSB rigs seem to be making a comeback, but especially AM. Part of the reason I enjoy AM is that most of the old timers on AM love to talk and reminisce about their radios and are willing to help others in any way they can.

> I think the CCA AM nite is a good thing... just wished they used another
> freq. as 3885 is pretty busy down here in Texas. 3880 or 3890 would
> have been better.
>

Agreed. I guess they chose 3885 because they want EVERYONE to join in.

> Also - please - please - PLEASE -
>
> NO AM contests !!! Lets keep that form of electromagnetic pollution
> strictly SSB!

AMers ragchew. Who could conceive of an AM contest? Even on the nights that points are gathered based on age of equipment and number of QSOs, its usually just a bunch of guys chatting around one or two frequencies and letting anyone who wants to join in.

I'm in the central time zone.

I'm assuming the Millennium officially begins at the International Date Line, somewhere out in the Pacific? What is difference in hours between that Date Line and my time zone?

I'd like to tune in to WWV when the Millenium begins, to see if they say anything special, but I guess they're on Greenwich time, so I wonder if they will wait until the new day gets around to Greenwich, England, or will they kick it off when the new day begins at the International Date Line?

Hello Ed,

Sorry to take so long to reply. Didn't find this until today!

Have moved and am set up in new location. Still have the BC-221, too.

Don't have any GC receivers except my BC-342-N, and it's not for sale. My collection now is almost all parts, tubes and books. So if you need, say, a good 12AQ7GT, I've got a couple, but not much gear. Almost all of my gear is homebrew.

I like the SX-100, HQ-129X, and the NC-173, in that order, as middle-priced GC receivers of the '50s. SX-96 gets honorable mention, too. Of course a lot of the fun is finding out what they will do.

The R-390 and R-390A (they look alike, but are quite different inside) are wonderful receivers, but there is a LOT inside one - and much of it is mechanical stuff. You need special tools and the manuals and/or videos to work on them. (Yes, there are instructional videos made by hams for hams on how to work on the R-390A.)

Good luck and enjoy gear that "glows in the dark". If you need a part or tube, just email - I might have it!

Hi Bob,

Actually, the next millennium begins at 0000 local time at the
International Date Line in 368 days. This year's end should provide
for some interesting listening, though, as well.

In the good old days, outfits like International Crystal would "match" new crystals to your existing ones. In other words, you send 'em your 146.52 crystals, they analyze 'em, and then make other sets to frequencies you specify. You could probably figure it out yourself with a Pierce oscillator and a frequency counter, but ask the crystal guys, they may still offer this service.

Calendars and arithmetic are two different things. Arithmetic by itself doesn't tell us when new centuries or millennia begin. Those are not arithmetical terms.

A calendar system _could be devised_ which began new centuries when the nines rolled over to zero. But the system we use now doesn't do that.

> Notice the nine increased by one. Any change in the hundreds
> column indicates a change in century. Similarly, any change
> in the tens (or decades) column indicates a change in decade.
> Any change in the thousands column indicates a change in
> millennium. This is all second-grade arithmetic.
>
[...]

But it has nothing to do with when centuries or millennia begin. With our current calendar system, the first year of the first decade of the first century of the first millennium ended with the digit one: therefore each decade, century, and millennium also begins with a year ending with the digit one.

All official timekeepers which I have checked, including the Naval Observatory and Greenwich Observatory, observe this long-standing system. 2000 is the last year of the twentieth century.

The _only_ exception I have found was Kaiser Wilhelm's Germany which, in 1899, declared by fiat that the 20th century was to begin in Germany in 1900, a decision which was at odds with the official calendar then and now.

Of course, I'm not counting the boobs, and the media boobherds, who, as usual, got it wrong again.

Probably most of the boobherds know that the third millennium doesn't begin until 2001, but they have such a low opinion of their

audience that they're convinced most of them won't "get it" even if it's explained to them.

With happy Y2K wishes,

> Then when you get to the 10th finger, you're counting a second
> decade?

If you limit yourself to just the Whole Number System, as you've
done above, you have no "zero," so to count off ten fingers,
your count runs from one to ten. But, if your fingers were
all amputated, what's the count of finger you have? You have to
move into the Natural Number System to answer that: Zero.

The present decade, "the ninties," began on 1/1/1990 and ends
12/31/1999. That's ten years, a decade, 0 to 9. See the number
line below.

Hi Bob,
The Dateline is exactly 12 hours ahead of Zulu time, so at 2400
31 December local at the Dateline, it will be 1200Z. Since you're
six hours behind Zulu, the Dateline's new year rolls in at 0600 in
your time zone.

Hi Chaps,

Well now listen to this. According to Greenwich Observatory in England, which is smack dab on the 0 degrees line, they state that the new Millennium does not start until 0.1 second after 23:59:59 hours GMT on December 31st 2000. So they are saying everyone else is a complete year out. Don't believe me? Give 'em a ring and find out for yourselves.
Best regards,
Duncan G4DFV

Get rid of that zero on the top line; the Romans did not use zero at all.
Things add up then. 1 is the first year, 100 is the 100th. If you start at
zero, the 100th year is 99.

(We still have problems with that when a computer says drive 0, drive 1, drive
2 and we poor humans say 1,2,3...)

Thank you. So that means, at 6 a.m. Central Time this Friday, the year 2000 will be beginning out in the Pacific at the date line. And at 6 p.m. Friday, Central Time, WWV should be announcing the beginning of the year 2000 on Greenwich Time.

Thanks!

Bob

Assuming the radio works properly;
Loop couple a sensitive freq counter, or a spectrum analyzer to the receive xtal.
Fo=Fc-10.7/9 seems to ring a bell. You might check for activity down there.
Try sticking the transmit xtal in the receive socket, and see if it will oscillate. a .5 volt increase in the emitter lead of the osc transistor when
the xtal is plugged in may indicate success. Fo=Fc/12 might be the fundamental
on the xmit xtal. Std 20pf load, 10ppm 3rd overtone xtals should work.

Been looking at this one for a while.
First, Crist has little to do with it now, (The Bible doesn't mention the year, so
it is trivial, *the date that is, not his birth*) We also skipped a few years in the 1400's.

The math though is simple and logical:

1- 0.1-1 or 1-100 (starts w/ .1 because the first year was not completed until
the last day of the first year. It
is this point that causes the
10's 100's and centuries to start
at 1, or 11, or 101, or 1001 etc.)
2- 1.1-2 or 101-200 etc.
3- 2.1-3
4- 3.1-4
5- 4.1-5
6- 5.1-6
7- 6.1-7
8- 7.1-8
9- 8.1-9
10- 9.1-10 -end of first century
11- 10.1-11 - 1001 -1100
12- 11.1-12
13- 12.1-13
14- 13.1-14
15- 14.1-15
16- 15.1-16
17- 16.1-17
18- 17.1-18
19- 18.1-19
20th century- 19.1-20 (the end of the 2000th year) 1901 - 2000 (again, end of 2000)
21- 20.1-21 2001 to 2100

simple.

-Pete

I visit Fair Radio on a semi-regular basis. They used to get loads of
R-390's
with the counters on them. They always took them off -- I was able to get
a couple just for the asking last time I was up there a year or so ago. I am
sure
they have loads left as well as the usual assortment of turns counters they
have in stock from regular instrumentation.

8544. New Radio Trends?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-29 00:00:00 UTC
From: Bis_Wichy@webtv.net
Message-ID: <1563-386A1A94-6@storefull-167.iap.bryant.webtv.net>
Source record: 74115

Yesterday got to play with a friend's new Ten-Tec Pegasus. It's a pretty neat gizmo. Basically, the radio is in a box shaped like a PC. You control it through an RS-232 data link with another computer.

Pretty cool. Performance is really good. So what does the future hold for ham radio? I see two possiblities...

(1) With the upcoming digital TV movement - Large screen TV's will become very cheap. Instead of using a small VGA monitor or tiny LCD screen - you would be able to control your "computer radio" by using a large 55" screen TV. A small infrared box would sit on top of the TV. You could then point to this box using a handheld I/R remote control to control your radio. Using a clunky keyboard would be a thing of the past. An I/R or 900 mhz wireless link with a mic/headset and the I/R remote control would allow you to operate the HF computer radio while sitting on a Lazy Boy...

Think about it! I've been to a lot of ham shacks and most of them have a TV nearby. If your TV has PIP (Pic in a Pic) capability - you can operate HF while watching TV... something many of us do anyway... ooooh admit it!

(2) This would be of interest to the BA group... I can see Ten Tec offering circuit board "kits" of the Pegasus. With an additional controller made from a PIC, a 7805 VR, switches and a few 10K pots it would be possible to "build" your own radio. You can drill holes in your own enclosure and mount the pots/switches anyway you see fit. You can even custom make your own dials. Then, simple put the Pegasus circuit boards and PIC controller inside the enclosure. Now all that's left is to program the PIC controller to send commands to the Pegasus when the switches and pots are moved.

You could go even farther... Say you have an old BA that blew a hard to get transformer. Simply gut it out and replace the electronics with a Pegasus kit. You now have an up to date DSP radio with the look of a Boat Anchor.

CCA howls aside... can you imagine a KWM-2 done up this way? Why I can see many small American companies getting into the business of making replica ham radios.

Ohhh nooo! I can feel the heat from those e-flames a-coming!!!

But before you light that match, consider this.... ham radio is at a fork in the road.... we can continue down the path we are currently on... that is, closed boxes - closed software - no user repairs or mods - everything provided by the factory and all that is needed is to mash

the button to speak... the results speak for themselves (literally!).

..or we could return to the days when you could modify and change your own equipment. Days when every issure of QST, 73 and CQ had mods and pictures of rigs hams actually built.

If Ten Tec was smart... they would take the clue from the PC industry and offer these open "kits" rather than provide just another "closed box". Apple went the closed box route with their wonderful Mac and now they only have 12% of the market. PC companies are making fortunes as they offer the other 88% software and hardware upgrades of all sorts.

But the window of opportunity is closing quickly...

Icom, Yeasu and Kenwood will probably offer their computer radios this Summer/Fall... and for far less.

If you think this is a great idea -- and even if you don't - help an American company out and send Ten Tec some email...(I did, but I'm only one nut) I think they are pretty clueless. They only made the Pegasus because so many hams were willing to pay $1500 for a Kachina and they wanted some of that action.

Yep, a Collins/Pegasus KWM-2 combo would be something...

You can flame now.... ;^)

8548. FS: 450V & 600V electrolytic caps CHEAP!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-29 00:00:00 UTC
From: Radios_R_Me@yahoo.com
Message-ID: <386a5a6c.31222237@news.earthlink.net>
Source record: 74119
Cross-posted to: rec.antiques.radio+phono,rec.audio.tubes,rec.radio.swap,rec.radio.amateur.boatanchors

FOR SALE: Thirteen 450-600V CAPACITORS etc.

I have to unload some nice new multi-section H.V. electrolytic caps
etc.
I need room! I bought the following capacitors that are surplus to my
needs.
They are new and in the boxes. Will sell them cheap because I need
some space here!

Someone please take the whole box of them for only $25.00

(They are worth about $6 to $8 each but no one wanted them for that. A
couple of guys said they would buy them and never sent the money!)

Here's what I have:

(NIB SPRAGUE)
20 uF at 450V DC, plus 50 uF at 250V DC, 3.5"X 1.3" (QTY 6)

(NIB SPRAGUE)
80 uF at 450V DC, plus 10 uF at 400V DC, plus 40 uF at 300V DC, plus
30 uF at 300V DC
all in one can! 3.5"X 1.3" (QTY 3)

PHILCO (Used)
8/475, 8/475, 10/50 (in one can)

TYPE FP: (smaller)(used)
15 uF/400V, 10/350, 20/150 (all in one can) (QTY 1)

Used Cornell Dubilier 80 uF plus 80 uF at 300 V DC (QTY 1)

Used Cornell Dubilier 8 uF at 600 V DC (QTY 1)

Someone please take all 13 of them for just $25.00
plus shipping!

I think this price is extremely low. You can't get many 450V or 600V
electrolytic can caps like this any more. The ripple current rating is
much
better than those cheap photoflash capacitors you will see in the
catalogs.

I just want to unload them. If you think that is still too high, make
me an offer!

Shipping additional.

The jack-booted thugs
continue to build the murderous police state,
while the american sheeple graze and bleet.
Wonder how long before owning a BC-611 means jail time?

-------- Original Message --------
Subject: FEDS RAID ELECTRONIC HOBBY VENDORS
Date: Tue, 28 Dec 1999 15:04:45 -0600

See: http://www.2600.com/news/1999/1218.html

FEDS RAID ELECTRONIC HOBBY VENDORS
12/18/99
2600 has learned that several small electronic hobbyist
vendors were recently raided by federal agents
brandishing semiautomatic weapons.
News of these raids has been kept out of the media
and many of those involved fear retribution
if they openly discuss the case.

Until now, these companies had operated for years
selling harmless educational electronic kits
(like wireless microphones) to students, hobbyists,
ham radio operators, and hackers.
Now their inventories are being seized at gunpoint
and their owners could be facing bankruptcy and prison time.

The U.S. Dept. of Justice is apparently re-interpreting federal
wiretapping and smuggling laws to include
small hobby radio transmitters.
Even possessing so-called "Mr. Microphone" type toys
can now put hobbyists at risk of looking down the barrel
of a federal agent's loaded gun, a felony conviction,
federal prison time, loss of property,
and legal fees into the tens of thousands of dollars.

Ramsey Electronics and Super Circuits are just two
of the companies recently raided at gunpoint.
Both have good and longstanding reputations for selling
inexpensive, quality educational kits and components
to electronics hobbyists for many years through ads
in electronic hobby magazines and their websites.
A high-ranking Justice Department official
told one of the business owners the orders for these raids
are politically motivated and originated from a

very high level in the Clinton administration
as a result of the Linda Tripp wiretapping case.
"They just need convictions," the official said.

Earlier this year the Justice Dept. indicted Bill Cheek,
the well-known and loved author of books on radio scanner
modifications and Monitoring Times column writer.
Bill was selling very simple "data-slicer" circuits
(made from parts available at any Radio Shack)
that could be used with a PC and a scanner to monitor
radio data transmissions--including unencrypted
police mobile data terminal (MDT) transmissions.
Even after Bill had been diagnosed with
terminal cancer, the Federal government refused
to back off, even issuing a summons to court
on the same day he was to begin chemotherapy.

In 1995 2600's BernieS was locked up
in five different maximum-security prisons
over 14 months by the Secret Service
for possessing his laptop computer, his software
and ordinary electronic parts available at Radio Shack.
He had been distributing parts, software, books
and pamphlets about cellular and coin telephones.
The Justice Department's final investigation report stated
"There were no victims in the offense."

This is a clear pattern of harassment
and abuse of power by our Federal government
against people teaching others about electronic
communications. It appears our government doesn't want
people to know this information.
2600 strongly feels this knowledge is important
for people to have, and will continue spreading
it at every opportunity.
Write and call your legislators to
complain about this injustice.
You could be next!

I doubt the part about being "raided at gunpoint."

Visit this URL:
http://www.ramseyelectronics.com/cgi-bin/SoftCart.exe/scstore/Hframeset.htm?
E+scstore

It is the Ramsey Electronics web site's page on federal restrictions. Seems
to me that if they had been raided at gunpoint they would mention the fact.

Look at your fingers. Count 'em. Start with one. Ends with ten. Ten is the last finger of that ten. Don't have a -1 finger? That's right! Same with the calendar.It didn't start with "minus 1." Same as fingers, decades and centuries END in "zero."

For an interesting joke, good on kids, drunks or newgroups, ask someone how many fingers he has. He'll say, "Ten, of course!"

"No," you reply, "you've got eleven."

Then, count the fingers, starting with the little finger on one hand:

"Ten, nine eight seven six (finishing one hand).... and five more is eleven!"

Cheers,

Cortland

Joe,

Thank you for your integrity. Although our political views may differ, I applaud you for demonstrating the ability to reason and accept when the facts are before you. This is what made, and will ultiomately keep our nation great in the eyes of the world.

I became involved in exposing these types of incidents when trying to ridicule someone pointing them out to me. The harder I tried to humiliate them, the more I humiliated myself with the facts. I wish I had displayed the moxy that you have in your replies since your original post in reply to David Stinson's topic that started this thread.

My hat is off .....

No, it is because I read the original post, written by a very
conservative government hater, and it seemed filled with bias, but if
you read between the lines, it sounds like an electronics purveyor is
stretching the law, FCC-wise.

You wouldn't be fudging the truth, here? A retired Army colonel who's
a liberal? Voted for Clinton twice? Twice?????? You voted for good ole
draft-dodging Clinton twice? If you insist, fine. But because this all
seems so hard to believe, it's hard to believe anything else in your
post.

8572. Esaki Diodes?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-30 00:00:00 UTC
From: John Black <jmblack@compuserve.com>
Message-ID: <386C1DD2.BFDF4354@compuserve.com>
Source record: 73947

There was a thread here many moons ago about Esaki Diodes, and their characteristics. Wish I had it back!

I have two old Sony portable radios which use Tunnel Diodes for the LO in the FM tuner section. Each had a 2.6v mercury battery soldered in for bias purposes, and of course they are long dead. Replacing the battery with whatever I can find to approximate the voltage doesn't work, so I need the advice of experts!

Can someone tell me how I can test the diode to see if it's bad? Should it behave like a normal diode when checked with an multimeter? Were they very fragile? Do I have to reproduce the exact impedance, voltage, etc. of the mercury battery in order to get it to work?

Help!

John KB5AG

Good Christ, Bob!
The point is that he isn't selling "illegal electronics."
With a few exceptions not present here, there is not supposed
to be such a thing. The improper USE of the items is illegal;
Claiming that these things are "illegal" falls under
prior restraint and has been prohibited in the courts repeatedly.
They have "interpreted" the actual laws to fit their political ends
(building case precedence to use on Tripp) and to hell with
whos life and family get destroyed.

Your "good for the feds" crack is an excellent example
of the "it's not me who's being crushed so it's OK"
attitude that has allowed this cancer to grow in our
government.

D.S.

If I remember correctly, tunnel diodes appear to be shorted when tested with a multimeter's diode-test setting. Instead, put a scope across it, and feed it with a function generator or signal generator through a few hundred ohms of resistance. At some level of signal amplitude, you should see the upper (or lower) half of the sine wave from the generator turn into something very close to a square wave, if the diode is good. This effect is quite dramatic, and will likely be visible from DC to 100 MHz or so.

It's pretty neat to watch a tunnel diode snap into the negative-resistance portion of its characteristic curve. One of the easiest demonstrations of quantum mechanics you can perform at home.

Nothing against Mr. Ramsey personally, and I wish him and his business the best; I recall reading, fascinated, their advertising in electronics and hobby magazines as far back as I care to remember. I feel badly that his honest business was interrupted by our "paid thugs." However, some of my sympathy hardened a little while browsing his website in the wake of this discussion. I saw there a broadcast FM band J-pole, all 10' of PVC pipe and twinlead (maybe), for $40. Not that this should be construed to be indicative of his products, person, or business... Business is business, and feds are feds. America; love it or leave it. (Tongue in cheek, of course. ;-)

Are you implying there may be something "evil" in a J-pole antenna or just
that it might be overpriced?

I have one word for those sterile compu-ham boxes (Kachina, Pegasus, et al: "BORING".

Real radios don't need computers to function, and they glow in the dark!

AN ISRAELI ARCHITECT BUILT A BELL-ARCH BETWEEN NAZARETH & BETHLEHEM

A Bell-Arch connecting Nazareth and BethLehem has been inaugurated today
by the Israeli Architect and City-planner Dov Chernobroda.
The Bell-Arch extends over the sky of the Holyland between Nazareth in the
Galillee in Israel and BethLehem in Judea in the Palestinian Authority.

The Celestial Bell-Arch is assembled of an infinite number of
Bell-Cross-Receptacles , joined together into an Urban like structure.

The Main and central `Jerusalem Avenue` streches from North to South,
as well as the parallel `Nazareth Path` and `BethLehem Path`, on both
sides. All the Bell-Cross-Receptacles and all the urban parts are waiting
to be named.

Please contact us and PLANT YOUR BELL to eternize your`s or your loved
one`s names.

Everyone is invited to send in a Personal story or letter, sharing with us
the special meaning a Bell has in their lives.

please visit us at

Yaesu FT101B with AM filter , Cosmetic condition a 7, working condition is excellent.
Stock Mic, Manual, $300.00 SOLD

Tram D201 in good condition, manual $275

Johnson Messenger 250 Base, Astatic Golden Eagle D104 Mic like new condition in origianl box, $300.00

PDX400 eight tube 10 meter base amp, Brown with gold knobs and Browning Eagle on the front, looks very nice with a Browning. 700-1000 watts PeP, in good working order. $280.00

Sears RoadTalker 40 SSB/AM Base/Mobile Good working and cosmetic condition, stock mic. $75.00

Cobra CAM 88 Tube 23 channel base Working with a copy of the SAMS, no Mic but I have the hard to find mic connector. $70.00

Siltronics Model 90 -6 VFO, Good cosmetic and working condition $70.00

BBE 411 Rack mount Sonic Maximizer, Rack mount, 1/4" in and out, will work for voise or musical instruments $90.00

HoneBrew Meter, 20/200/2000 Watts. Reads forward and reverse wattage. Made from a
Goldline coupler and Large scale meter $35.00

ParaDynamics 3 Way, large scale meter, CB meter, switch between Power/Modulation and SWR. $40.00

Demco Modulator in good working condition with a Fentone Broadcast Style Dual crystal mic head mounted on a D104 G Stand. Works great, Nice smooth audio $200.00

Crown IC 150 Stereo Preamplifier, with paperwork $150.00

Ranger 2970 100 Watt 10/11 meter mobile transceiver, Very good condition. My only complaint is the LCD display washes out easily when viewed from an angle.$275.00

Motorola UHF Power amplifier Model N1275A 450-470 Mhz $50.00

Browning MK III receivers and transmitters Abandoned project Sell the whole lot for $375.00 Email for details

Yaesu XF-32A SSB Crystal filter for the Yaesu FT101 $35.00

Bird 50-125 Mhz Slug, 5,000 Watt Peak/1,000W RMS $40.00

Bird 50-125 Mhz Slug, 10,000 Watt Peak/1,000W RMS $40.00

Realistic Navaho TRC 30A 23 Channel Base in good condition $40.00

Realistic cb Phone $25.00

HomeBrew 10 meter 3 tube amplifier, Uses 3 military 24 volt filiment versions of the
6146 tube (they are available from RF parts at a reasonable price) Fresh tubes ,
adjustable bias, adjustable input SWR tuning, Load/Plate/ SSB/AM 150 Watts + $150.00

National NC-183 Shortwave Tube receiver, Good condition with manual $170.00

Yaesu FTdx 560 10-80 meter SSB/CW transceiver, Excellent condition, Plastic still on the face, All tubes in excellent condition, Very Clean, with copy of manual $250.00

Gonset GSB 101 amplifier, uses four 811 tubes, Good condition, No internal TX/RX switching, Must be done externally using a Dow Key relay. Works excellent with copy of manual. Pick up only in So. Ca. $300.00

Icom IC230, 2 meter mobile transceiver 146-148 Mhz FM $50.00

Azden PCS2800 10 meter FM mobile transceiver and a Azden PCS3000 Mobile 2 meter transceiver, Both need repair, with manuals $60.00 for the pair (Don't have time to get to these and fix them)

Pics available for all items, Prices do not include shipping.
Items ship UPS ground after receipt of MO
Please Email for more info

>The First Millenium ran from 1BCE to the *end* of 999AD: 1000 years.

Bzzzzztt!!! Wrong answer.

We don't doubt your ability to count, but you refuse to accept the
starting date of our calendar system, which was 1AD.
This date is based on the now globally recognized Gregorian calendar,
the initial epoch of which was established by the sixth-century
scholar Dionysius Exiguus, who was compiling a table of dates of
Easter. Rather than starting with the year zero, years in this
calendar begin with the date January 1, 1 Anno Domini (AD).
Consequently, the next millennium does not begin until January 1, 2001
AD.

you need to calm down and recount your ammo or go outside and watch for
those black helicopters. Watch out for any black cars driving down the
street it may be some CIA agent spying on you.

John Ramsey gave his permission for an email he sent to be posted on
the Fox Hunting reflector. I found it interesting and stuck it on a
web page for our local club members to read. I guess it is the "real"
version of what happened.... at least from his standpoint. You can
take a look at it at www.qsl.net/w4kma/ramsey.html

Thank you for posting the Ramsey e-mail. I am suspicious of claims about "armed federal agents" but this is outrageous. I don't know what can be done but I intend to write my Congressional reps and senators today.

I certainly understand the concern about electronic devices being used for something other than their intended purpose. Hell, a ham friend of mine a commo chief for Alabama state police and they confiscate Icom, Kenwood, Alinco, Yaesu handhelds from drug runners all the time. Guess folks who sell handhelds are next??

It is obvious that the Dept of Justice does not understand that the bad guys will get this stuff anyway and that they need to concentrate on the bad guys, not on people selling honest stuff honestly.

flash news (Ramsey Electronics)
FEDS RAID ELECTRONIC HOBBY VENDORS
12/18/99
2600 has learned that several small electronic hobbyist vendors were recently raided by federal agents brandishing semiautomatic weapons. News of these raids has been kept out of the media and many of those involved fear retribution if they openly discuss the case.
Until now, these companies had operated for years selling harmless educational electronic kits (like wireless microphones) to students, hobbyists, ham radio operators, and hackers.
Now their inventories are being seized at gunpoint and their owners could be facing bankruptcy and prison time. The U.S. Dept. of Justice is apparently re-interpreting federal wiretapping and smuggling laws to include small hobby radio transmitters.
Even possessing so-called "Mr. Microphone" type toys can now put hobbyists at risk of looking down the barrel of a federal agent's loaded gun, a felony conviction, federal prison time, loss of property, and legal fees into the tens of thousands of dollars. Ramsey Electronics and Super Circuits are just two of the companies recently raided at gunpoint. Both have good and longstanding reputations for selling inexpensive, quality educational kits and components to electronics hobbyists for many years through ads in electronic hobby magazines and their websites. A high-ranking Justice Department official told one of the business owners the orders for these raids are politically motivated and originated from a very high level in the Clinton administration as a result of the Linda Tripp wiretapping case. "They just need convictions," the official said. Earlier this year the Justice Dept. indicted Bill Cheek, the well-known and loved author of books on radio scanner modifications and Monitoring Times column writer. Bill was selling very simple "data-slicer" circuits (made from parts available at any Radio Shack) that could be used with a PC and a scanner to monitor radio data transmissions--including unencrypted police mobile data terminal (MDT) transmissions. Even after Bill had been diagnosed with terminal cancer, the Federal government refused to back off, even issuing a summons to court on the same day he was to begin chemotherapy.
In 1995 2600's BernieS was locked up
in five different maximum-security prisons over 14 months by the Secret Service
for possessing his laptop computer, his software and ordinary electronic parts available at Radio Shack. He had been distributing parts, software, books and pamphlets about cellular and coin telephones. The Justice Department's final investigation report stated "There were no victims in the offense."
This is a clear pattern of harassment

and abuse of power by our Federal government against people teaching
others about electronic communications. It appears our government
doesn't want people to know this information.
2600 strongly feels this knowledge is important for people to have, and
will continue spreading it at every opportunity.
Write and call your legislators to
complain about this injustice.
You could be next!

JJ, hiding behind a cowardly anonymous CB handle, drooled:

> you need to calm down and recount your ammo or go outside and watch for
> those black helicopters. Watch out for any black cars driving down the
> street it may be some CIA agent spying on you.

I don't need to be paranoid. The feds aren't hiding anything.
They know Americans are generally collaborators and cowards who
will allow anything to happen as long as their bellies are full.
Karl Marx got that part right. As long as their belly
is full (and their TV works- more important then
food for Americans) you can do anything you want to
these people and they will ignore it.

A sideband slicer was the term used in the days when people were converting older receivers to receive SSB. It's merely a unit that with filter(s) or phasing techniques processes the IF signal to separate the sidebands, provide sideband and carrier supression of the unwanted sideband) and often had its own audio chain to provide the amplification.

Thus it "sliced" up the bandpass to provide the desired "slice" of it as USB or LSB and if military I supposed sometimes ISB output was provided.

The TMC unit and the CV 591 and slicers by Central Electronics were prevalent as well as homebrew ones sometimes based on LF command receivers.

>calendar.It didn't start with "minus 1." Same as fingers, decades and
>centuries
>END in "zero."

If you begin your count at one, certainly your count will end at ten;
if you were to begin your count at two, you're count would end at
eleven; if you began at three, you'd end at twelve. If you being your
count with zero, you'll end at nine [page down to the bottom].

Think of your age. You were not one year old on the day you were born;
at the instant you were born, you were zero years old, and you remained
zero years old up to the end of your 364th day; at the beginning of
that 365th day, you turned one year old. During your first year of
life, you were zero years old.

Your first ten years of life ran from the day you were born, zero
years old, to the last day of year nine. Using interval notation:

1st year: [0,1) 6th year: [5,6)
2nd year: [1,2) 7th year: [6,7)
3rd year: [2,3) 8th year: [7,8)
4th year: [3,4) 9th year: [8,9)
5th year: [4,5) 10th year: [9,10)

In this notation, "[" means the left end-point is included, and ")"
means the right end-point is not included; this is standard interval
notation. A single point cannot belong to two disjoint intervals.

Note that your 11th year would be the interval [10,11) -- your
11th year on this planet would begin on the day you turn ten.

You folks are using cardinal numbers in place of age.
The trouble you're encountering stems from believing that that 11th
year is equivalent to being 11 years old; that 11th year runs from
the beginning to the end of being 10 years old. It all stems from
that 1st year; it runs from the day a person is born to the end
of the 364th day: [0,1) is the first year.

Yes, it's unusual to say that someone is zero years old during their
first year of life, but if we restrict ourselves to whole-number
years, then that is the person's age in years. Again, you were
not one year old on the day you were born; you were zero years old
during that first year of life.

Age will always lag the cardinal number by one. I'm 45, which means I'm in my 46th year of life; 45 years whole years have already passed by -- I'm in the 46th year. Age always lags the cardinal number by one. Always.

Jeff KH6O/6 (in reply to some emails, KH6 is part of Call Area 13; Area 13 consists of: KH0, KH1, KH2, KH3, KH4, KH5, KH6, KH7, KH8, KH9) (That's a decade of prefixes! If your count begins with zero, it will end with nine.)

Hi All,

I've just got a real nice Trio TS520s + DG5 display.
I now want to hook this radio to my linear amplifier, but I need a plug
to fit the 8pin REMOTE connector on the back of the radio.

Does anyone know where in the UK or on the net, I can buy one ?

Happy new year to all.

Source record: 74022

I've come across a small number of ARC 14320 female connectors.
Price is $20 each plus shipping.

These are for ARC TYPE 12 equipment, but they would make a
good substitute for the PL-153-A (ARC-5/SCR-274N) plug with small
modifications. The 14320 has 19 contacts, one more than the PL-153-A,
but in the same pattern. So the M contact should be filled with
solder to avoid mis-orienting the plug. The 14320 also has a small
key on the shell above the L cup which would have to be filed off.
A final difference between the two is a split-ring is used to
secure the connector to the shell instead of a screw. The dimensions
of the shell and the location of the securing ring are exactly the same.
These are NOS and the contacts appear to be gold plated.

For a comparison picture:

I'd like to offer the following transmitter for sale:

Transmitter tag reads:

"ITT Mackey Marine Reserve Transmitter Type 2017A
405-535 kHz, 40W output, A2 emission"

Almost new condition except for some scratches on the top of
the chassis (probably from rack mounting).

Crystal-controlled with the following frequencies:
425, 454, 468, 480, 500 kHz (all in A2!)

Front panel: Antenna tuning controls (course and fine), 0-5 amp
antenna current meter, channel selector.

Offers + shipping (should be about $30 from Minden NV 89423)

73, Jeff KH6O

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

Additionally, we plan to include a morse code tutor / refresher in package at some point, though we hesitate to entice registrations with the promise of this, as we're not 100% sure of this yet.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

Cortland Richmond <ka5s@saber.net> wrote:
>Look at your fingers. Count 'em. Start with one. Ends with ten. Ten is
>the last
>finger of that ten. Don't have a -1 finger? That's right! Same with the
>calendar.It didn't start with "minus 1." Same as fingers, decades and
>centuries
>END in "zero."

If you begin your count at one, certainly your count will end at ten;
if you were to begin your count at two, you're count would end at
eleven; if you began at three, you'd end at twelve. If you being your
count with zero, you'll end at nine [page down to the bottom].

Think of your age. You were not one year old on the day you were born;
at the instant you were born, you were zero years old, and you remained
zero years old up to the end of your 364th day; at the beginning of
that 365th day, you turned one year old. During your first year of
life, you were zero years old.

Your first ten years of life ran from the day you were born, zero
years old, to the last day of year nine. Using interval notation:

1st year: [0,1) 6th year: [5,6)
2nd year: [1,2) 7th year: [6,7)
3rd year: [2,3) 8th year: [7,8)
4th year: [3,4) 9th year: [8,9)
5th year: [4,5) 10th year: [9,10)

In this notation, "[" means the left end-point is included, and ")"
means the right end-point is not included; this is standard interval
notation. A single point cannot belong to two disjoint intervals.

Note that your 11th year would be the interval [10,11) -- your
11th year on this planet would begin on the day you turn ten.

You folks are using cardinal numbers in place of age.
The trouble you're encountering stems from believing that that 11th
year is equivalent to being 11 years old; that 11th year runs from
the beginning to the end of being 10 years old. It all stems from
that 1st year; it runs from the day a person is born to the end
of the 364th day: [0,1) is the first year.

Yes, it's unusual to say that someone is zero years old during their
first year of life, but if we restrict ourselves to whole-number
years, then that is the person's age in years. Again, you were
not one year old on the day you were born; you were zero years old
during that first year of life.

Age will always lag the ordinal number by one. I'm 45, which means I'm in my 46th year of life; 45 years whole years have already passed by -- I'm in the 46th year. Age always lags the ordinal number by one. Always.

Jeff KH6O/6 (in reply to some emails, KH6 is part of Call Area 13; Area 13 consists of: KH0, KH1, KH2, KH3, KH4, KH5, KH6, KH7, KH8, KH9) (That's a decade of prefixes! If your count begins with zero, it will end with nine.)

Source record: 74034

Amateur Restructuring is Here: Three License Classes, One Code Speed

NEWINGTON, CT, Dec 30, 1999--Amateur Radio will get a new look in the new millennium. The FCC today issued its long-awaited Report and Order in the 1998 Biennial Regulatory Review of Part 97--more commonly known as "license restructuring." The bottom line is that starting April 15, 2000, there will be three license classes--Technician, General, and Amateur Extra--and a single Morse code requirement--5 WPM.

"We believe that an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art," the FCC said.

Besides drastically streamlining the Amateur Radio licensing process, the FCC said its actions would "eliminate unnecessary requirements that may discourage or limit individuals from becoming trained operators, technicians, and electronic experts."

Although no new Novice and Advanced licenses will be issued after the effective date of the Report and Order, the FCC does not plan to automatically upgrade any existing license privileges. The ARRL had proposed a one-time across-the-board upgrading of current Novice and Tech Plus licensees to General class, but the FCC declined to adopt the idea. This means that current licensees will retain their current operating privileges, including access to various modes and subbands, and will be able to renew their licenses indefinitely.

Starting April 15, 2000, individuals who qualified for the Technician class license prior to March 21, 1987, will be able to upgrade to General class by providing documentary proof to a Volunteer Examiner Coordinator, paying an application fee, and completing FCC Form 605.

The FCC's decision not to automatically upgrade Novice and Tech Plus licensees means the current Novice/Tech Plus HF subbands will remain and not be "refarmed" to higher class licensees as the ARRL had proposed. The FCC said it did not refarm these subbands because there was "no consensus" within the amateur community as to what to do with them.

As it had proposed earlier, the FCC decided to lump Technician and Tech Plus licensees into a single licensee database, all designated as "Technician" licensees. Those who can document having passed the 5 WPM Morse code examination will continue to have the current Tech Plus HF privileges. "If documentation is needed to verify whether a licensee has passed a telegraphy examination, we may request the documentation from that licensee or the VECs," the FCC said.

In addition to reducing the number of license classes from six to three and eliminating the 20 and 13 WPM code tests, the FCC also will reduce the number of written examination elements from five to three, authorize Advanced Class hams to prepare and administer General class examinations, and eliminate Radio Amateur Civil Emergency Service (RACES) station licenses. RACES will remain, however. "After review of the record, we conclude that we should eliminate RACES station licenses because RACES station licenses are unnecessary for amateur stations and amateur service licenses to provide emergency communications," the FCC said.

Under the new licensing scheme, there will be four examination elements. Element 1 will be the 5 WPM Morse code exam. Element 2 will be a 35-question written test to obtain a Technician license; Element 3 will be a 35-question written test to obtain a General license, and Element 4 will be a 50-question written test for the Amateur Extra license. The FCC has left it in the hands of the National Conference of VECs Question Pool Committee to determine the specific mix and makeup of written examination questions. Current Amateur Radio study materials remain valid at least until the new rules become effective in April.

The FCC's new licensing plan means someone will be able to become a ham by passing a single 35-question written examination. The plan also simplifies and shortens the upgrade path from the ground floor through Amateur Extra--especially since amateurs will only have to pass one Morse code test.

Elimination of the 13 and 20 WPM Morse requirements also means an end to physician certification waivers for applicants claiming an inability to pass the Morse code examination due to physical handicap.

The effective date provides a window of upgrade opportunity for current Advanced licensees. Between now and April 15, current Advanced holders may take the existing Element 4B, a 40-question test, giving them credit for having passed the current Extra written examination. Likewise, holders of a Certificate of Successful Completion of Examination (CSCE) for Elements 3B or 4B dated on or after April 17, 1999, will be able to qualify for General or Amateur Extra respectively when the new rules go into effect on April 15, 2000.

The FCC disagreed with the League's suggestion that it undertake a restructuring of operating privileges along with licensing restructuring. "We believe that in light of ongoing discussions concerning implementation of new and more modern communications technologies within the amateur service community, we should accord the amateur service community an opportunity to complete such discussions and possibly reach a consensus regarding implementation of new technologies before we undertake a comprehensive restructuring of the amateur service operating privileges and frequencies," the FCC said in its Report and Order.

In its amendments to Part 97, the FCC's Report and Order refers to a "Club Station Call Sign Administrator," something that does not exist under the current rules and which was not explained in the R&O itself. An FCC spokesperson said the Commission plans to issue a Public Notice soon to explain the program and to solicit qualified entities to serve as call sign

administrators for club station applications.

A copy of the entire Report and Order (FCC 99-412) is available at
http://www.arrl.org/announce/regulatory/wt98-143ro.pdf or at

>including access to various modes and subbands, and will be able to renew
>their licenses indefinitely.
>
>Starting April 15, 2000, individuals who qualified for the Technician class
>license prior to March 21, 1987, will be able to upgrade to General class
by
>providing documentary proof to a Volunteer Examiner Coordinator, paying an
>application fee, and completing FCC Form 605.
>
>The FCC's decision not to automatically upgrade Novice and Tech Plus
>licensees means the current Novice/Tech Plus HF subbands will remain and
not
>be "refarmed" to higher class licensees as the ARRL had proposed. The FCC

>said it did not refarm these subbands because there was "no consensus"
>within the amateur community as to what to do with them.
>
>As it had proposed earlier, the FCC decided to lump Technician and Tech
Plus
>licensees into a single licensee database, all designated as "Technician"
>licensees. Those who can document having passed the 5 WPM Morse code
>examination will continue to have the current Tech Plus HF privileges. "If
>documentation is needed to verify whether a licensee has passed a
telegraphy
>examination, we may request the documentation from that licensee or the
>VECs," the FCC said.
>
>In addition to reducing the number of license classes from six to three and
>eliminating the 20 and 13 WPM code tests, the FCC also will reduce the
>number of written examination elements from five to three, authorize
>Advanced Class hams to prepare and administer General class examinations,
>and eliminate Radio Amateur Civil Emergency Service (RACES) station
>licenses. RACES will remain, however. "After review of the record, we
>conclude that we should eliminate RACES station licenses because RACES
>station licenses are unnecessary for amateur stations and amateur service
>licenses to provide emergency communications," the FCC said.
>
>Under the new licensing scheme, there will be four examination elements.
>Element 1 will be the 5 WPM Morse code exam. Element 2 will be a
35-question
>written test to obtain a Technician license; Element 3 will be a
35-question
>written test to obtain a General license, and Element 4 will be a
>50-question written test for the Amateur Extra license. The FCC has left it
>in the hands of the National Conference of VECs Question Pool Committee to
>determine the specific mix and makeup of written examination questions.
>Current Amateur Radio study materials remain valid at least until the new
>rules become effective in April.
>
>The FCC's new licensing plan means someone will be able to become a ham by
>passing a single 35-question written examination. The plan also simplifies
>and shortens the upgrade path from the ground floor through Amateur
>Extra--especially since amateurs will only have to pass one Morse code
test.
>
>Elimination of the 13 and 20 WPM Morse requirements also means an end to
>physician certification waivers for applicants claiming an inability to
pass
>the Morse code examination due to physical handicap.
>
>The effective date provides a window of upgrade opportunity for current
>Advanced licensees. Between now and April 15, current Advanced holders may
>take the existing Element 4B, a 40-question test, giving them credit for
>having passed the current Extra written examination. Likewise, holders of a

>Certificate of Successful Completion of Examination (CSCE) for Elements 3B
>or 4B dated on or after April 17, 1999, will be able to qualify for General
>or Amateur Extra respectively when the new rules go into effect on April
15,
>2000.
>
>The FCC disagreed with the League's suggestion that it undertake a
>restructuring of operating privileges along with licensing restructuring.
>"We believe that in light of ongoing discussions concerning implementation
>of new and more modern communications technologies within the amateur
>service community, we should accord the amateur service community an
>opportunity to complete such discussions and possibly reach a consensus

David:

Thank you for posting the alert as to what happened to Ramsey Electronics.

I am a retired Army colonel and my politics are somewhat to the left; I am a yellow-dog Democrat and voted for Bill Clinton twice. I favor serious gun control. BUT, this is beyond good sense. I now think that the guys who are telling me that I should be afraid of my own government may have a point.

I recommend that folks go to this URL and read a description of what happened: http://208.46.148.11/cyberskip.htm

Here is the problem: This has set a precedent. Yes, terrorists or other evil doers could use Ramsey kits to do bad things. But, the vast majority of folks buying those kits are electronic hobbyists who do nothing more than eavesdrop on their big sister and her boyfriend. The cops should be concentrating on catching lawbreakers who have broken the law, not sweeping up every possible item that could, maybe, possibly be used by a criminal.

Case in point: I have an acquaintance who is an Alabama state police commo tech. He told me once that they are forever seizing 2-meter handhelds that crooks are modifying to transmit outside the ham bands and using for short range commo. How about we just swoop down on AES and HRO and seize all their handhelds -- after all, don't want any criminals buying one. The same goes for HF rigs. I spent 25 years in intelligence work and I can tell you that international terrorists and drug runners use amateur gear for long-haul commo. Let's just shut down Ten-Tec, ICOM, Kenwood, Yaesu, Collins, the whole works.

Think it can't happen? Think it will not happen? What would you have said ten years ago if I had told you that the feds would sue the cigarette companies and win a multi-billion dollar settlement?

This weekend I will compose a letter to my Congressional delegation, citing this outrage, and asking that they get a rope around Janet Reno and her associates. I will post that letter to this NG and anyone who wishes may use my letter as a model for writing their own.

David,
Just to let you know, I understand what you are are saying in your posting.
I had a Pro-2006 that I sold years ago. Recently I tried to buy another
Pro-2006 because I made a mistake in selling mine and the Candian seller was
fearful of being prosocute by their/and our goverments because the enacted
laws are so bad that any interpetation is going to put Joe Public at risk of
doing more time in prison than a violent offender will ever do!!

Joe,

The armed and dangerous bit is getting far too commonplace. This isn't the first such case in point. This has bveen going on unreported for somtime now....

A good story (non-fiction) is Bruce Sterling's "Hacker Crackdown". EFF should have the online version available for download.

Joe Schlatter wrote in message ...

Law? What law. There is a heap of difference between law and non-statutory whimsy.

As long as we see this attitude prevail, there will be no end to the freedom given up for some pseudo security.

Can you say Hegalian Principle?? (And yes my spelling is probably wrong, but my understanding of the perils of this type of thinking is not). Attack me on the perepherial
issues, but you won't touch the essence of the point that is being made here.

> When you count on your fingers and reach 9, that is a decade?
> Then when you get to the 10th finger, you're counting a second
> decade?

When you count out ten items, you have a decade of items.
Where you begin your count dictates where you end: From 1985
to 1995 is a 10-year period, a decade.

If we specify a particular decade, such as the Ninties, that
decade would begin at 0000 1/1/90 and end at 2400 1/31/99:
{1990,1991,1992,1993,1994,1995,1996,1997,1998,1999}

So if you begin with a count of one, when you reach 10, yes
you have a decade.

```
0 1 2 3 4 5 1,998 1,999 2,000 2,001
--+-----+-----+-----+-----+-----+ / / +-------+-------+-------+--
1BCE 1AD 2AD 3AD 4AD 5AD 1998AD 1999AD 2000AD 2001AD
```

The First Millenium ran from 1BCE to the *end* of 999AD: 1000 years.
The Second Millenium runs from 100AD to the *end* of 1999AD: 1000 years.
The Third Millenium begins 1/1/2000.

Great fun!

Jeff: I feel obligated to spring to the defense of the VF-1. I use mine with a DX-60B on 40 meter AM. If I let it warm up a while it is pretty stable. Like you said, much depends on the skills of the builder. Mine was a total disaster -- I stripped it to the chassis and started over. Good mechanical stability now.

VF-1 was wired for use with the Heath Cathode Keyed rigs (I think) so the grid block keying used in the DX-60 requires some adaptations. As I recall I just leave the filament running and switch B+ (through the accessory plug) with the Function switch

Hello, In my opinion this is really bad. I wonder if they will go after radio shack? I'm sure the Shack's lawyers would have a lot more to say than picking on a smaller company like Ramsey. I guess we're getting to the point that thinking of a crime will be just as illegal as doing it. I think that almos anything can be used illegally. The fed's actions smack of big brother tactics that should not be tolerated.

The same analogy can be said for guns. Look at how many guns are used illegally, but you don't see the feds rushing in to all the gun shops to shut them down. The gun lobby has too much money to fight back, Ramsey dosen't. Wonder how many people have been killed by a wireless mic kit?

The GREAT flaw in your logic is the ASSUMPTION of later "due process", or that the court process is somehow isolated from *law enforcement* - hasn't it YET occured to you that events LEADING to the reported incidents are a PART of our "due process" that are set forth and permitted by our current legal system?

Or do you REALLY think those two institutions operate entirely independently from each other? Who do you think gives the search warrants - or wiretap permissions? Here's a clue - IT'S THE JUDGES!

The SAME judges who will next render the "due process you speak of..."

Have a few new, unused "C"-type antenna connectors. These are UG-709's and are weatherproof, silver plated, with gold center pin and teflon insert. They are mil-spec--intended for use with a wide variety of military receivers/transceivers (R-388/390/390A, etc)--made by Kings, with individual serial numbers, in unopened pouches. Catalog listings, in the unlikely event you can still find one, will show price well over $30. I'll sell these for $20 each, shipped CONUS (price firm, no trades). Will ship outside CONUS, but buyer then pays shipping. Tks, 73, and Vy Happy New Year! Jan N0JR

8653. FS: Collector's Hallicrafters R-44 Speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-31 00:00:00 UTC
From: Jan Robbins <swanman@cfu.net>
Message-ID: <386CEF98.1A809AD9@cfu.net>
Source record: 73812

Here, from a special collection, is a Hallicrafters R-44 speaker. The R-44, designed during WW II, was intended to match and be used with Hallicrafters receivers such as the SX-42, SX-46, and especially SX-48--ones that were widely employed in both military and civilian applications. It was also widely used then and later with other military receivers (r-388, 390, 390A, SP-600, etc.) requiring 400-600 ohm speakers.

The R-44 is built to tough military specs. It is of heavy (10lbs) steel construction and physically very imposing (9"h x 18"w x 10"d). Heavy-duty speaker is 5" x 8", with 6" x 11" speaker grill. At upper left of front panel is a high fidelty/communications switch for selecting frequency response appropriate to program material. The only connection is the audio output on rear panel.

This unit, dated June 1947, is in Collins-scale EXCELLENT condition cosmetically and electronically. Cabinet, painted standard Navy gray with black speaker grill, has no dings or dents and very few marks of any kind. Front panel lettering is clear and complete. Audio output connection is completely intact. Even the original spec.-sheet with circuit diagram is still attached to the bottom under waterproof clear tape.

R-44's are scarce in any condition, and I have not seen one this good since the 1950's. If you're looking for the perfect match to that restored 1940's-early-1950's vintage Hallicrafters or military receiver, this is a true collector's item. Sell for $275 + shipping (firm, no trades). Tks, 73, es vy Happy New Year!

8657. Help with BC-350 Battery Charger Problem???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-31 00:00:00 UTC
From: jimvalin@aol.com
Message-ID: <19991231141443.26634.00000093@ng-fn1.aol.com>
Source record: 73816

Anyone have a schematic for the BC-350? I've got one which will no longer operate in charging the higher voltage batteries (BP-7s) but continues to function OK on the BP-8s.

It seems that when the microswitch nearest the negative terminal is depressed, no voltage is forthcoming!

Without a schematic, it will be hard to get into this one.

Any ideas (or schematics) out there?

Happy New Year...

K4ZDZ

>that any criminal in England can obtain a gun while knowing
>that law-abiding citizens are unarmed. Think about it.

From this, you'd expect criminals in England to be more successful, with higher rates of property crime in England than in the USA. Does this in fact happen?

You also expect much lower rates of shootings, since criminals with guns are much less likely to get into firefights if nobody else has a gun. Do the statistics bear this out?

Suppose the speculations above are true, and England is a society where you're more likely to be robbed but less likely to be killed. How, exactly, does this make the USA the superior place to live?

ALSO yes - an unarmed civilian society has little at its disposal to resist with - why do you suppose gun control is the FIRST effort displayed by those who intend to dominate others?

>
>Suppose the speculations above are true, and England is a society
>where you're more likely to be robbed but less likely to be killed.
>How, exactly, does this make the USA the superior place to live?

Guess it depends on your personal courage and willingness to accept domination of others over you and your family - ever hear the chant "better RED than dead"?

It's a good thing OUR forefathers were made of better stuff - else we would today be swilling tea and singing "God save the Queen" at national events. Be as proud of YOU pacifism as you choose - *I* prefer to have at least a SMALL degree of control over my survival against those who would seek to hurt or rob me - whether they be private or government individuals.

We already can guess YOUR choice!

The only long-term result to date of loss of gun ownership in England was the increase in deaths by other methods. Louisville Slugger comes to mind as an example. You may want to have a dialog with someone from Austrailia; their gun grab was recent enough for the resulting facts not to be tumbled by "spin"

Washington DC has the highest crime rate and violent death rate per capita than any of the other possessions as well as legitimate states of the U.S. How would you go about explaining that.

The original issuance of Gun Legislation in the 30's was a result of Congressional Research honoring a request by a senator for an english trranslation of Hitler's gun ownership laws in nazi Germany. If this is what you are wanting for America, at least have the conviction and belief in your own ideas and opinions to say that it is what you want. However, if you have a problem with nazi Germany, you may consider rethinking your stance and apologies to those you have tried to force it on.

The only thing that separates a conversation from a debate is the introduction of facts. The Congressional Record is an excellent source of facts. The corner bar has some great conversation.

>Does this in fact happen?

Yes!
>You also expect much lower rates of shootings, since criminals with
>guns are much less likely to get into firefights if nobody else has
>a gun. Do the statistics bear this out?

Yes! Robbed and assaulted individuals are much more easily subdued by
criminals.

>Suppose the speculations above are true, and England is a society
>where you're more likely to be robbed but less likely to be killed.
>How, exactly, does this make the USA the superior place to live?

If you deem England, with higher rates of property crime and equal to higher
rates of assault with other weapons to be a "superior place to live"...
Godspeed in you return to the "Motherland".

Seems to me that the issue was settled in the 18th Century (though briefly
revisited in 1812).

Happy New Year and may you be safe in your person and possessions without
having to resort to personal protection.

Yeah,

The same was said about Randy Weaver and Gordon Kahl. Then the inquest came, and we saw how much of an understatement the "one-sided" was. Things had already escalated to far worse than any of us had feared. Of course, we can all ignore this in unision and pretend to be surprised when they come to take our radio gear away, stating that we are a threat to national security because we can monitor unscrambled communications that exist contrary to the original petition to the FCC for the spectrum before the refarming.

If this is what you want for the country, at least have the faith in your own beliefs to state so with pride.

Amen Gary. Remember the first words of a class on understanding law in America.

"The LAW is in the JAW of the JUDGE"

The discarding of Blackstones for Judge-Made law has managed to repeal the law of the land in the course of one century and replace it with the law of admiralty.

Warning: If anyone wants to take me to task on this topic; prepare yourself for complete an ultimate humiliation. I have enough concern for the self-esteem of fellow citizens to make this public notice and 100 times more square footage of examples notarized by public officials, concressional record, congressional reasearch reports, historical documents, etc. to back this up.....

Just finished a book that should be required reading for ALL gun control parties, pro or con. It is "More Guns, Less Crime" by John Lott. He is actually an economist who started out anti-gun and collected facts and figures, not hype, to prove pro-gun wrong. He got his eyes openned. A must read for all gun debater's....

Don't know about you, Dave, but most of the Texans I know, including
myself, would rather die defending our property than be robbed. It's
the principle that matters. Of course, if one doesn't have any principles,
one might choose to be a sheep, ripe for shearing.

Seems to me you have some sort of hidden agenda. You wouldn't be one
of those armed criminals by any chance, would you?

It's even more astounding on a regional basis in the US. My 89 year old aunt has a revolver in her nightstand. Real crime (not the victimless kind) is virtually non-existent in this East Texas town.

Also, compare the crime rates to the European countries which require every household to have a military rifle. Those rates are virtually non-existant. If you were a criminal, would you break into a house where the occupants were known to be armed?

> ALSO yes - an unarmed civilian society has little at its disposal to

That includes Hitler, Stalin, Castro, and Saddam Hussein. What great historical figures to side with.

I have some high voltage plate cap connectors, Alden p/n 91CCSTLRL. These are a good snug fit on a 6146 or similar size sweep or HV rectifier tube. (Thes are probably not meant for power tubes). Cap is hard red plastic with a 4" long rubber HV cable coming out one side, and has a soft red rubber skirt about 1-1/2" dia that extends down about 1" to fit over the outside of tube at the top. Each is still sealed in original foil wrap and boxed, mil surplus. $1.75 each or 4/$6. plus shipping. Please REMOVE the two "96"s to reply or call 334-347-5281 day/eve.

I am posting this for a friend of mine, Paul, W8ZH. Please respond to him directly at w8zh@juno.com

73, George
K8BRW

I am looking for a Henry 8K. I have for sale or trade a Henry 4K Ultra, S/N 265. I have the original bill of sale, amp was built in 1982. This amp is cosmetically and electrically perfect. only defect is wattmeter needle is bent very slightly to right. meter movements are available from Henry for abt $100. goes with spare 8877. Driving with IC-746 will pin internal meter and about 3K out on coaxial dynamics wattmeter. will trade or ?. Will swap complete station, 4K Ultra and Icom IC-746, 746 purchased new in May 1999 and has less than 50 hours on it. This gear is in as new condition. I also have a homebrew pair of 8877 on 50mc. It is ugly, crude and built on used chassis, etc., but driven with the 746 it will make 3800 out on 6. Its kind of like the W6PO 2 mtr amp but uses 2 tubes and lumped inductors instead of pieces of pipe. It has 4400v, 2amp supply, Dahl 80lb plate xfmr, etc. is in junky 6ft rack. I am open to offers if any interest. Thanks, w8zh@juno.com or 440-548-4426 anytime.

Paul

Nah, its not dead. It's changing like everything else.

Welcome newcomers. I hope you get as much enjoyment from the hobby as I have the past 34 years.

I'm always looking for QSO's, any mode, any band.

73

I'm going to try to combine two hobbies this winter by installing my Collins in my Pontiac. Problem is I have to fix the Collins so I'm looking for A) the power cable from the dc supply to the radio. B)the mobile bracket and(this is the biggie) C) the filter&crystal for the KWM-1 I think that they are a match set. Thanks for any help as this will be my first Collins other than the one I use to play with at my uncles shack(w6tco)20+ years ago.

8685. WTB: CW Filter and Tuning Knob for Heatkit HW-101

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-31 00:00:00 UTC
From: Rob Dunn <dunnr@ix.netcom.com>
Message-ID: <84jjn0$hr8$1@nntp6.atl.mindspring.net>
Source record: 73844

I know its a longshot but I am looking for the optional CW crystal filter for the Heatkit HW-101 80-10m transceiver. Today I crossed the threshold to commit myself to getting my ticket. Went down to Radio World in Boulder City, NV today looking to purchase one of the MFJ code tutors and a couple of tubes for a receiver. Instead an old Heathkit HW-101 transceiver was calling my name and Dave, the owner, made it too easy for me to answer its call. Since my primary interest is CW DX I would really like to install the CW crystal filter that was an option while I am going through the restoration. Does anybody have a parts rig that still has the CW filter available. The catalog number I have seen was "SBA-301-2, 400 Hz CW Crystal Filter" so I am guessing that this is same CW filter as used in the SB-300 series of receivers as well. It has a 2k ohm impedance and a 400 Hz bandpass.

Thanks,

Rob Dunn

Best thing they could have done. Now that I can get my license back I'm sure there are plenty of old hams out there that think I don't deserve to get a Gen. Class, but I got the experience to put most of them to shame in both HF, VHF and MicroWave.
I guess I'm lucky, I've had a TECH ticket since 1951, took the code, took the General Class written, held a Radiotelephone 2nd Class with Ship Radar Endorsement. Then in the '60s I was transferred out of electronics to sales and PR. My licenses expired. Never worked CW in my whole life. Tried to pass the 5 WPM in the late '70s but couldn't pass it, never could get it back. Now at 69 years old maybe I can get my license back again. Oh yes after I got my Tech lic. I tried to go to 13 WPM never could get that either. Worked for AT&T and Public Safety for many years as a Microwave Engineer and Communications Officer. I think I'm qualified to have a General Class. Like to hear some comments. By the way I still have copies of all my expired licenses.

Nope, Texans don't believe in small talk. The appropriate
response to a robber with a gun is a .45 hollowpoint, not
words. Because of that, crime is virtually non-existant in
my home town in East Texas. A lot of people don't bother
locking their houses or their vehicles.

Without FAR more info as to condition, prices will vary all over the map - as "junk", or a parts rig - about $100 - in mint condition, $1000 - yours is probably somewhere in between those numbers!

SOMEHOW, you guys wanting price estimates on stuff just GOTTA use common sense is supplying enough info to actually get the response you seem to expect. Be reasonable - if YOU saw an item advertised for sale, what would be the first pieces of information YOU would need before considering buying it?

WE need the SAME INFO!

After all - your ISP *surely* isn't charging you by the WORD - so why be stingy with your info?

Cortland Richmond <ka5s@saber.net> wrote:
> Use ROMAN numerals, OK? That's how we got screwed up on this subject.

Well, okay:

```
Ordinal interval
------- -------
I [1BCE,1AD) {where "[" means the left endpoint is include
II [1AD,2AD) and ")" means the right endpoint is excluded
III [2AD,3AD) -- a single point cannot belong to two dis-
IV [3AD,4AD) joint intervals}
V [4AD,5AD)
...
C [99AD,100AD)
...
M [999AD,1000AD)
...
MM [1999AD,2000AD)
```

Same conclusion: The ordinal number will always lead the left endpoint by one. The 2000th year from Christ's birth is this year, 1999. Of course, if Christ was born earlier than 1BCE, we're already in the Third Millennium.

>starting date of our calendar system, which was 1AD.

Based on the belief that Christ was born in 1AD. But now it's believed
that he was born as late as 1BCE. So the 1st year ran from 1BCE up to,
but not including, 1AD -- in interval notation: [1BCE,1AD); the 2nd year
ran from 1AD up to, but not including 2AD: [1AD,2AD); et cetera.

Now, on to more important things: The new General and Extra class
licenses will only have a 5 wpm code requirement. We've gone back
to 1912 licensing requirements. :(

Bravo, Joe. Going after John Ramsey was no more than an
act of sheer uncontrolled lunacy, tinged sith ignorance,
stupidity and egomaniacism. Like some other Federal

initiatives we've seen in the past few years. I'll use your letter to help form mine.

Meanwhile, next time you see a freight train loaded with shipping containers go by, understand that only one in every 10,000 gets opened and checked *AT ALL* by US Customs (Source: A U S Customs inspector) and almost all originate in some other land, many where the inhabitants do not wish us well....

--> I agree. A look at 75 meters will prove that the ability to copy
Morse doesn't say anything about a person's intelligence or benefit to
our hobby. Frankly, I have no problem with the new scheme. I know there'll
be a lot of complaints from the more elitist types, though...the usual
"I had it tough, so I don't see why it should be easier for anyone else."
Yes, I think nearly anyone can learn to copy Morse code at 20 wpm if they
want to, but I don't think there's any reason they should have to. Like
AM, CW will always still be around for those who enjoy it.

I would like to see them toughen up the theory a bit, though. Especially
some of the antenna theory. It's very useful to any practicing amatueur,
much more so than memorizing the band edges. (Everyone I know uses a
chart when they operate, anyhow.)

And me as well. I struggled, and I do mean struggled, to get my code up to 13 WPM to make it from Novice to Advanced. I did that in 1992 and haven't touched code since. I consider myself just as much of a Ham as anyone else - shortly after I got my Advanced, I got rid of my Yaesu rig in favor of a National NCX-5 with tubes and circuitry I could tune up and repair. Next is the Hallicrafters HT-37 on my bench which will be used with the SX-28 that's nearly done with the restore. But I'll have my D-104 mike hooked to the transmitter.

More power (to the legal limit, that is!) to them what uses code -- I view it as a part of our hobby, much like using tube-type equipment. But we don't require Hams to be able to use tubes to get licensed. I support the restructuring. For those criticizing the League -- it ain't perfect, but I am convinced our bands would now be in the hands of "business interests" if not for the ARRL (remember 220 and UPS?).

And when it's in place, I'll buckle down, study the books, and upgrade to Extra. See y'all on 10M!

Source record: 73974

i have both radios in my shack and the 342(312) is a much better radio than the 348. they are similar but the 348 is considerably broader with respect to selectivity. the 342(312) is especially superior when equipped with the variable xtal phasing control. not all have this feature bandwidth on my 342 is about 6 kc which is nice for swling. the 348selectivity here has 12 kc wide and 4 kc in narrow. 4 kc also supresses the signal quite a bit. changing the coupling capacitors would tighten the 348 q up a bit, but purists would frown on it.have fun dave

Way back when ...tone diversity multiplex.. you could use the R390A with
geared down BFO to back out channels . Not directly reading but way good on
logging scale to pull a channel out of an aggregate. So you catch the
channel then bust code and read the mail. Thats what its about folks..

It would sure scare the hell out of them if enough people knew about their conduct. That is before all the guns are collected. After they are collected, then they won't give a damn in the least.

A millennium is defined as a period of 1000 years. If your personal
calendar starts with "1BCE", then yes, your new millennium starts in
2000. The rest of the civilized world uses a calendar that is based on
a starting date of 1AD. Our new millennium starts in 2001. I didn't
set up the calendar system, so don't blame me.

>Now, on to more important things:

I didn't start this stupid thread.

>I have a dial, dark gray, with the numbers inside windows around the
>perimiter,
>and an associated right angle gear box, painted gray. Could anybody tell me
>which HRO receiver(s) this might be from?
>
It's a PW dial. It may be from an HRO-7 or HRO-5, as another has posted.

The HROs all used the PW-type dial/capacitor assembly, with the right-angle feature. The NC-100, NC-101 and NC-2-40 families used the NPW dial/capacitor assembly, in which the output shaft came out the back of the gearbox. (no right-angle feature).

However, note that National sold the dials alone and dial/capacitor assemblies for homebrewers. The PW was available with no capacitor sections, or with various combinations of left and right side capacitors up to two sections on each side. The NPW was available with anywhere from zero to three capacitor sections.

I recently sold an NPW dial here (no capacitor sections) in nice shape for the asking price of $25, and had to turn away several offers (it went to the first taker).

Hope this helps.

73 es Happy New Year

Jim, N2EY

8728. FS or T: Twenty-One Heathkit Lunchboxes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-12-31 00:00:00 UTC
From: gharmon@idworld.net
Message-ID: <386cb3f9.161577948@news.idworld.net>

Why does one person need 21 extra Lunchboxes, my sweet XYL asks? Spare parts, I sheepishly reply. NOT, says she. Further she says, either the Lunchboxes or the SX-88 go." Easy choice. I have 21 Heathkit Lunchboxes for sale or trade. I have examined each unit to the best of my ability and listed the descriptions below. Obviously I could make more selling the better ones and then selling the rest for parts, but I would prefer to sell as a package mainly because it gets them out of the garage at the same time which improves credibility with She Who Must Be Obeyed.

01. CB-1 (SO-239; xtal socket on rear; hole on front; volume control replaced; 1 small knob missing; no xtal; tubes light)
02. CB-1 (SO-239; xtal socket on front; no handle; extra holes in top; no xtal; audio static)
03. CB-1 (SO-239; no handle; hole on top; different mike connector; 3 holes on front; no emblem; no meter jack; no xtal; needs 6AQ5 for audio static)
04. HW-29/Sixer (SO-239; xtal socket and extra control/knob on front; no xtal; audio static)
05. HW-29/Sixer (SO-239; xtal socket and extra mike socket on front; extra chassis w/tube inside; no xtal; feedback)
06. HW-29/Sixer (SO-239; 2 holes on top; xtal socket holes on front; center of large knob missing; no xtal; audio static)
07. HW-29/Sixer (SO-239; one small knob wrong; emblem missing; mike connector replaced with phone jack; extra mike socket on front; extra holes on back; extra chassis w/tube inside; no xtal; feedback)
08. HW-29A/Sixer (Spotting switch on front; xtal; audio static)
09. HW-29A/Sixer (SO-239; xtal socket on front; no xtal; audio static)
10. HW-29A/Sixer (SO-239; xtal; audio static)
11. HW-30/Twoer (SO-239; xtal; audio static)
12. HW-30/Twoer (Xtal; tubes light)
13. HW-30/Twoer (Two holes in top; xtal; audio static)
14. HW-30/Twoer (Xtal; hum)
15. HW-30/Twoer (Xtal; hum)
16. HW-30/Twoer (SO-239; xtal socket on front; large mike connector; Trans-Rec-Trans switch replaced with toggle; wrong knobs; large relay and rectifier inside, hole in top; xtal; hum)
17. HW-30/Twoer (BNC; S-meter; xtal socket on front; 2 small knobs wrong; wrong handle; xtal; hum)
18. HW-30/Twoer (Xtal socket on front; pin connector on top; no xtal; tubes light)
19. HW-30/Twoer (Xtal; audio static)
20. HW-30/Twoer (Xtal; audio static)

21. Unknown (SO-239; no handle; no xtal; no meter jack; model and name removed; hum)

Note: None of these units have been serviced or cleaned. There may be other internal mods which I did not notice. Most of these came without microphones or power cables but I do have one extra mike and one extra power cable. Manual copies available for each model.

$21.50 each gets you the whole grouping. That's $451.50 plus shipping. For further information or pictures please email me directly.

Thanks and 73,

==========

From an interview with an English street criminal: He said
that any criminal in England can obtain a gun while knowing
that law-abiding citizens are unarmed. Think about it.

I have acquired a Battleship-sized Boat Anchor for an attempt at restoration. It is about the same size as an RCA navy RBB, RBC, etc. The frequency coverage is about 3-20 MHz. The outer cover is missing, so there is no clue as to the manufacturer or anything else. The bottom cover has a schematic diagram that says it is a BC-1147A. It's a superhet with 110 VAC supply. Military lists don't include this number. Does anyone know anything about this receiver? Thanks, Ross N0ZA
